ANNEX I – QUANTITATIVE REPORTING TEMPLATES		31

SUMMARY

This Report refers to the business of Navillus Insurance Company Dac ('NICDAC', 'the Company'), a captive insurer, authorised and supervised by the Central Bank of Ireland. It provides the reader with information on the Company's business and performance, system of governance, risk profile, valuation for solvency purposes and capital management for the reporting period ended 31 December 2019.

NICDAC has prepared this report in accordance with the relevant articles of the Commission Delegated Regulation (EU) 2015/35, together with the Guidelines on reporting and public disclosure issued by EIOPA.

On 8 January 2019 the Parent Company, Shire Plc was acquired by Takeda Pharmaceutical Company Limited (Takeda) becoming a Global, Values-based R&D-Driven Biopharmaceutical leader. Following the acquisition by Takeda a strategic review of the operations of Navillus under the new ownership of the Company commenced during 2019 and was still ongoing at 31 December 2019.

NICDAC financial statements are prepared to 31 December 2019 and it report its results in USD (United States Dollar). The Company fiscal year end will change with effect from 31 March 2020. The Company will prepare a 3-month period to 31 March 2020, this will then bring the Company year-end in line with Takeda, which is required for the integration activities and managing certain tax exposures.

The Company's business strategy was to provide coverage for the Baxalta Incorporated Group (Baxalta Incorp) which subsequently merged with the Shire Plc group in June 2016. As part of the integration of Baxalta Incorp into the Shire Group the risks previously written by NICDAC were placed under a new programme with the Group's other captive Company during 2016 and 2017. NICDAC did not write any business since 2016.

The Board has identified the key risks to which NICDAC is exposed and established appropriate corporate governance, risk management and reporting mechanisms to ensure that the identified risks remain relevant, and that they are managed and reported on with appropriate levels of detail and frequency. The Company has established a comprehensive suite of risk policies and implemented a series of internal controls to ensure that NICDAC can be managed in accordance with its governance and risk management systems. Documented escalation mechanisms are in place to ensure that any breaches in risk limits and tolerances, internal controls and governance requirements can be reported promptly to the appropriate individuals.

Risks to which the Company is exposed are well understood and are used to determine the level of solvency and capital required over a forward looking three-year business planning period. The results of this exercise are used to better inform decision making within the Company.

There were no material changes to NICDAC business and performance, system of governance, risk profile, valuation for solvency purposes and capital management over the reporting period.

During the period the Board of Directors declared and paid a dividend to the Company's shareholders Baxalta US Inc in the amount of USD 35.0M. The Dividend was funded from the proceeds from the Intercompany loan held with Dyax Corp and funds from the short-term deposit account with Danske Bank. The transaction had a material effect on the Company Solvency Capital Requirement (SCR) due to the significant decrease in the market risk charge following the decrease of funds held on the Intercompany loan account.

Navillus Insurance Company Designated Activity Company

As at 31 December 2019, the Company had eligible own funds of USD 12.2M available to meet its SCR of USD 2.8M; resulting is a Solvency Ratio of 432% which is in line with the Company's risk appetite. However, as the Minimum Capital Requirement (MCR) of USD 4.1M is now higher than the SCR, therefore the SCR should be considered to be equal to MCR with a Solvency Ratio of 260%. The Board of Directors is satisfied that the Company has adequate and appropriate capital to support its business plans. There were no instances of non-compliance with the capital requirements during the period.

A. BUSINESS & PERFORMANCE

A.1 Business

Navillus Insurance Company DAC was incorporated in Ireland in 1998 and in line with the requirements of the Companies Act 2014 converted to a designated activity company (DAC), limited by shares, effective 22 August 2016. The Company is a captive insurance undertaking, underwriting only the risks of its parent group.

The Company's business address and registered office is 3rd Floor, The Metropolitan Building, James Joyce Street, Dublin 1, Ireland.

NICDAC is authorised by the Central Bank of Ireland ('CBI'), under the European Union (Insurance and Reinsurance) Regulations 2015 (SI 485), to carry out the business of non-life insurance.

It has received a licence from the CBI to write the following classes of business:

- 3 – Land Vehicles
- 7 – Goods in Transit
- 8 – Fire and Natural Forces
- 9 – Other Damage to Property
- 11- Aircraft Liability
- 12 – Liability for Ships
- 13- General Liability
- 16 – Miscellaneous Financial Loss

The insurance supervision division at the CBI may be contacted at their offices in New Wapping Street, North Wall Quay, Dublin 1, Ireland.

KPMG Ireland is the appointed external auditor of the Company having been appointed to office during the period and is located at 1 Harbourmaster Place IFSC, Dublin 1, Ireland.

As at 31 December 2019, the Company's immediate parent undertaking (100% ownership) was Baxalta US Inc which was incorporated in United States of America. Direct share ownership (100%) transferred to Takeda Pharmaceutical International AG, incorporated in Switzerland, and the register of members was updated on 14 January 2020. The ultimate parent undertaking is Takeda Pharmaceutical Company Limited, incorporated in Japan.

The Company's current ownership structure is as follows:

Navillus Insurance Company Designated Activity Company

Details on other Group subsidiaries and related undertakings are published within Takeda Annual Report and Financial Statements, 2019, which is available to download at

<https://www.takeda.com/investors/reports/>

The Company did not write any new business during 2019.

The operation of the Company is subject to the local regulatory requirements in Ireland. Such regulations not only prescribe approval and monitoring of activities but also impose certain restrictive provisions, for example capital adequacy to minimise the risk of default and insolvency on the part of the Company to meet unforeseen liabilities as they arise.

NICDAC conducts all of its significant business activities from its office in Ireland, including:

- underwriting;
- premium invoicing and collection;
- claims reserving and payments; and
- investing.

There have been no significant legal or regulatory issues impacting the Company during the reporting period which have had a material impact on the Company performance.

A.2 Underwriting Performance

The Company has not written any new insurance policies since 2016.

Provision is made for notified losses on all underwriting years and calculated gross of any reinsurance recoveries.

The net claims paid during the financial year ended 31 December 2019 totalled USD 89k (2018: USD 149k) and the movement in the provision for claims incurred net of reinsurance amounted to a reduction of USD 1,132k (2017: reduction of USD 774k). Claims incurred are split by line of business as follows:

Line of Business	Net Claims Paid, Net of Reinsurance			Movement in Claims Provisions		
	2019 (USD k)	2018 (USD k)	Variance	2019 (USD k)	2018 (USD k)	Variance
General Liability	86	152	(66)	(1,120)	(600)	(500)
Fire & Other Damage to Property	-	-	-		(26)	(26)
Marine Aviation & Transport	-	-	-	(12)	(148)	136
Marine Aviation & Transport (Recoveries)	3	(3)	6	-	-	-
Total	89	149	(60)	(1,132)	(774)	(390)

Net operating expenses for the year amounted to USD 341k (2018: USD 309k).

A.3 Investment Performance

In line with the Company's documented investment policy, investments during the period included an intercompany loan with Dyax Corp which was repaid in full on 25 September 2019, cash and a short-term deposit with Danske Bank Ireland. Income arising from investment activities for the reporting period was USD 879,307 (2018: USD 903,851). Income was earned on the Intercompany loan up to the 25 September 2019. There was also a slight decline in the interest rates offered on the short-term deposit towards the last quarter of the period which was also a factor in slight decrease in the investment income during the period.

The Company has no investments in securitised asset classes and all investment income is recognised in the Company's income statement.

	2019	2018
	USD	USD
Income from deposits with banks	360,052	311,901
Income from intercompany deposit	519,255	591,950
	879,307	903,851

A.4 Performance of other activities

NICDAC does not engage in any activities other than those associated with captive insurance and has not entered into any leasing agreements.

A.5 Any other information

There are no other material items to report in this section.

B. SYSTEM OF GOVERNANCE

B.1 General information on the system of governance

In order to meet the requirements for sound corporate governance, ensure efficient conduct of business and to protect the interests of the Company's stakeholders, the Company has a comprehensive Governance and Risk Management system in place.

The Board of Directors of the Company (thereafter 'the Board') acknowledges its responsibility to ensure that risks are fully understood and appropriately managed and has taken appropriate steps to ensure that risk management, reporting and control processes have been put in place in a manner which reflects the nature and scale of the captive's activities. The Board is the focal point of the governance system and is ultimately accountable and responsible for the performance and conduct of the Company.

All authority emanates from the Board and responsibilities are delegated in such a manner so as to ensure that no one individual has unfettered powers of decision and that business is undertaken in a controlled and responsible manner.

The overriding goal of the Company's risk management strategy is to control and to achieve, as much as possible, a reduction in the Company's risk exposure as a means of minimising the impact of undesired and/or unexpected events.

The Governance and Risk Management System of the Company may be described as relying on four cornerstones:

- 1) Governance Framework, aligned with the Company's strategic objectives, providing top level oversight by the Board, clear ownership and accountability for risks, as well as clear escalation and reporting channels.
- 2) Risk Management Framework which details the Company's strategic objectives in documented Risk Policies. For each risk, limits and operational checkpoints as well as functional identification, mitigation and monitoring processes are documented.
- 3) A series of Internal Controls, defining the architecture of processes required to manage the Company in accordance with its governance and risk management framework.
- 4) A Risk Register combining operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's global strategy objectives.

The Board annually reviews the governance framework, the risk appetite framework setting out tolerance limits and operational limits for all risk categories, the risk management policies for all risk categories and the risk register for the Company.

The Board members have:

- The necessary knowledge, skills, experience, expertise, competencies, professionalism, fitness, probity and integrity to carry out their duties;
- A full understanding of the nature of the Company's business, material activities and related risks;
- A full understanding of their individual direct and indirect responsibilities and collective responsibilities; and

- An understanding of the Company's financial statements and key performance drivers.

The Company comprises the following senior personnel who have been selected to ensure that the Company is being run by individuals of appropriate expertise and integrity and who meet the criteria set out above:

Elizabeth Oatten (Chairperson)

Keith Jury

Tanguy Gaidoni

Vincent Barrett

There have been no material changes in the system of governance since the prior reporting period. Given the limited scale and complexity of the Company, and having reviewed the risks facing the Company thoroughly, the Board is satisfied that the system of governance in place is adequate.

The Board undertake responsibility for performing the equivalent function of an Audit Committee in relation to the reporting period ended 31 December 2019.

Key Functions

The key functions of Risk Management, Internal Audit, Actuarial, Compliance and Operations have clear and defined lines of reporting directly to the Board. This is facilitated by the straightforward nature of the Company's structure and fit-for-purpose documented policies and procedures which are clearly communicated and well understood by all relevant parties. The Board has ensured that the key functions are appropriately resourced and have the necessary authority and operational independence to perform their roles. The Company has engaged Aon Insurance Managers (Dublin) Limited ('AIMD') for the provision of management services, under the terms of an outsourced service and management agreement which is overseen by the Board of Directors.

Remuneration and material transactions

The members of the Board of Directors, with the exception of the Independent Non-Executive Director, receive no remuneration for their services as directors to the Company. There are no employees and consequently no remuneration is paid.

As a captive insurer, all NICDAC claims payments relate to insured risks of the Baxalta Incorporated Group. The Board of Directors declared and paid a dividend payment of USD 35.0m to the shareholder during the period. Other than these transactions which arise in the normal course of business, the Company had no material transactions during the reporting period with members of the shareholder group and none with members of the Board of Directors.

B.2 Fit and proper requirements

NICDAC has documented its Fitness & Probity policy setting out the Company's approach to the selection and assessment of the persons who effectively run the Company or are responsible for other key functions.

In selecting individuals as directors or function holders, the Company takes account of the following factors:

- specific requirements of the role
- the skills, experience and relevant qualifications of the proposed individual
- results of due diligence enquiries

- conflicts of interest
- time requirements and other commitments
- competence and integrity
- financial soundness

Consideration is given to ensuring an appropriate mix of knowledge, skills and experience across the Board of Directors and for those roles where specialist skills are required e.g. Head of Actuarial Function, only those individuals possessing the pertinent qualifications and expertise will be considered.

For those roles which are prescribed by the CBI as Controlled Functions (CFs) and Pre-approval Controlled Functions (PCFs), the Compliance function adopts appropriate control and due diligence processes in the selection and vetting of such individuals to ensure that they meet the regulator's fit and proper criteria. Written approval from the CBI is obtained prior to the appointment of PCFs. Appointed individuals are required to maintain on-going compliance with the Standards of Fitness & Probity and the guidance issued by the CBI. This is assessed by the Company on an annual basis.

NICDAC is satisfied that appointed individuals performing controlled functions meet all relevant regulatory requirements and have a suitable level of training and qualification in order to enable them to carry out their respective duties.

B.3 Risk Management System including the own risk and solvency assessment

The Company has taken appropriate actions in order to:

- embed risk management as a key function within its governance structure; and
- develop and maintain effective processes and reporting procedures to identify, measure, monitor, manage and report, on a continuous basis, the risks to which the Company is exposed.

Risk refers to the effect of uncertainty on the Company's ability to meet its objectives. Risk management is a systematic approach to protect the business resources and income against losses and unexpected events so that objectives of the Company can be achieved without unnecessary disruption.

The Company's Risk Management System:

- sets out the level of risk acceptable by the Company (Risk Appetite and risk tolerance);
- identifies the risks which represent a threat to the achievement of its strategic objectives;
- identifies, defines and regularly measures key risk indicators enabling an efficient monitoring of risks;
- defines the appropriate actions to reduce the Company's risk exposure;
- ensures the risk management framework is implemented in day-to-day business processes; and
- regularly reviews controls and mitigation actions to ensure that they remain relevant and effective.

In order to achieve these objectives, the Risk Management System of the Company has been clearly documented and specified through specific risk management policies for each key risk category. The key risk categories for which the Company has set up specific control and monitoring mechanisms are:

- Underwriting/Reserving
- Asset Liability Management ("ALM")
- Investment
- Liquidity and concentration

- Operational
- Reinsurance and other risk mitigation techniques
- Strategic Risk

In addition to these, an outsourcing policy defining the key rules and criteria to be followed by each service provider has been documented.

Own Risk and Solvency Assessment

The Company performs an Own Risk and Solvency Assessment ('ORSA') process annually in order to provide its Board of Directors with a forward-looking risk and capital assessment. The adequacy of the available capital, the Risk Appetite Framework and the appropriateness of the risk limits is assessed for the business planning period, considering the evolving risk profile. To this end, risks and scenarios to which the Company is exposed during the business planning period and which may affect the capacity to meet its insurance obligations or pose a threat to the achievement of its business objectives are taken into account. The approach may be summarised as follows:

Define the Stress scenarios

Stress testing and scenario analysis are used to assess whether the available and future capital is sufficient in expected and stressed situations.

Business projections, stresses and scenarios are compiled by the Operations Functions with input and agreement from the Board of Directors to ensure that these are appropriate for the Company.

Stress the Financial Plan

Stress test scenarios are embedded into the projected financial plan. Related solvency capital requirements and solvency ratios are then calculated for each year, resulting in a stressed financial plan and the solvency impact of adverse scenarios. This exercise is conducted by the Actuarial Function and validated by the Risk Management Function.

Assess prospective solvency needs on the basis of the Stressed Financial Plan

The Risk Management Function identifies potential additional mitigation actions to reduce the potential impact of the stress scenarios. Where applicable, any future additional capital needs will be identified and aligned to the Company's capital management plan i.e. defining the measures to restore the Company's solvency margin should the assumed scenarios occur.

Produce the ORSA Report

The ORSA report brings clarity over projected risk assessments and solvency needs to 3 different stakeholders:

Stakeholder	Expectation	ORSA Report
Board of Directors	Matching between risks to which the Company is or can be exposed and the Risk Appetite framework.	Provides a clear and prospective understanding of critical risk exposures and their relationship with Risk Appetite boundaries.
Shareholders	Detailed and prospective understanding about the risk of bankruptcy and potential need for future additional capital.	Provides a plan for capital needs on the time horizon of the financial planning.
Supervisory Authority	Detailed and prospective understanding of potential ORSA deviations compared to the Solvency Capital Requirements.	Gather information about: projected Solvency ratios; - explanations about deviations due to specific critical risks exposures.

The ORSA process described above ensures that ORSA is integrated in the decision-making and business planning process. Furthermore, monitoring procedures as set out in the risk management policies ensure that risk exposures are measured on a regular basis triggering exception reports for the Board.

In line with CBI requirements, the Head of Actuarial Function provides an actuarial opinion to the Board of Directors in respect of the ORSA once the results of the ORSA process are presented to the Board for review and challenge.

The capital risk appetite for NICDAC is to sustain its capital at a level sufficient to meet the Regulatory Solvency Capital Requirement at all times. It is not the intent to maintain a significant capital buffer in NICDAC balance sheet.

Takeda would always seek to be in a position to take prompt corrective action to replenish capital to an appropriate level in NICDAC so that solvency capital compliance can be demonstrated. Takeda is expected to continue to have ample capacity to provide this support to NICDAC.

B.4 Internal Control System

The Internal Control System embedded in the Company's operations is a mix of processes undertaken by all stakeholders within the Company to provide reasonable assurance that the strategic objectives will be achieved.

In order to achieve the aforementioned objectives, the Internal Control framework of the Company is structured around five complementary components.

Component	Contents
1) Control environment	A strong "risk and control" culture is embedded within the Company's operations through the continuous oversight of the Board of Directors and the communication to all internal stakeholders of all governance and risk principles through the Company's governance manual.
2) Risk assessment	Procedures and policies are detailed and formalised in order to disclose the way of identifying, managing, controlling, mitigating and reporting issues relating to each risk category.
3) Reporting channels	Clear and structured reporting processes are in place enabling the Board of Directors to have access to relevant, complete, reliable, correct and timely communication related to internal as well as external events.
4) Monitoring process	The appropriate escalation of significant issues to the Board of Directors, the ongoing involvement of all internal stakeholders as well as the Internal Audit process enables the Company to continuously monitor and adapt when necessary its Internal Control System.
5) Control activities	The Company has developed a comprehensive set of preventive, detective or corrective control actions embedded in its daily operations.

In order to set out how the Internal Control System is implemented, the Company's processes and related control activities are documented, monitored and reviewed on a regular basis.

These items are designed by the Risk Management Function, approved by the Board of Directors and evaluated by the Internal Audit Function. They are reviewed as often as necessary but at least annually.

Compliance Function

The Compliance Function is an integral component of the Company's governance system. The Company has outsourced its Compliance Function to its Insurance Managers. The Insurance Managers have appointed a Head of Compliance who is responsible for overseeing all compliance activities and ensuring the Compliance Function of the Company is adequately resourced. The Compliance Function reports to the Board at each and every Board meeting on its activities.

The responsibilities of the Compliance Function include:

- utilisation of compliance management practices that contribute to the use of sound, responsible and sustainable business practices by the Company;
- presentation of an annual compliance plan to the Board of Directors, outlining specific areas which it will focus on during a particular year;
- promotion of a culture of compliance within the organisation;
- maintenance of a comprehensive compliance risk management control and reporting system in conjunction with the Risk Management Function to assist in managing the compliance risk faced by the Company;

- consideration of possible future changes in the legal environment and their potential effect on the Company as well as providing regular compliance and regulatory updates to the Board of Directors;
- identification and communication throughout the Company the laws, regulations and codes of conduct to which the Company is subject and assisting to embed compliance with these in the way the Company does business; and
- investigation and follow up of compliance breaches, ensuring timely reporting to the Board and in certain circumstances to outside bodies such as the CBI.

B.5 Internal Audit Function

Purpose and Objectives

The purpose of the Internal Audit Function is to serve as an independent function that objectively evaluates and recommends improvements with respect to the Company's Internal Control System by facilitating an objective and independent assessment of the processes and controls in place.

It assists the Company in accomplishing its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes employed by the Company. The audit approach is risk based and in line with an annual audit plan which is provided by the Head of Internal Audit to the Board of Directors.

The Board has developed effective policies and practices and will take appropriate corrective action in response to any weaknesses identified by internal and external auditors.

The Internal Audit Function and the appointed Head of Internal Audit report directly to the Board of Directors.

Independence and Impartiality

The Company's Internal Audit Function has been established to be independent of the activities audited, the operational functions and the Board of Directors.

The Internal Audit Function is free to report its findings and appraisals and to disclose them to the Board as required. This principle of independence ensures that the Internal Audit Function reports directly to the Board of the Company.

B.6 Actuarial Function

The Company has established an effective Actuarial Function, including a nominated Head of Actuarial Function ('HoAF') approved by the CBI, which carries out the following key tasks:

The HoAF reports to the Board of Directors and issues a report in writing at least annually documenting all of the material tasks that have been undertaken by the Actuarial Function during the reporting period.

In establishing the Company's Actuarial Function, the Board of Directors has ensured that the persons involved have the requisite qualifications and demonstrable experience in the area of non-life reserving and are fully conversant with the Solvency II requirements for the calculation of Technical Provisions.

- coordinate the calculation of technical provisions;
- identify any inconsistency with the requirements set out in Articles 76 to 85 of the Solvency II

Directive for the calculation of technical provisions and propose corrections as appropriate;

- explain any material effects of changes of data, methodologies or assumptions between valuation dates on the amount of technical provisions;
- assess the consistency of the internal and external data used in the calculation of technical provisions against the data quality standards as set out in Article 82 of the Solvency II Directive. Where relevant, the Actuarial Function will provide recommendations on internal procedures to improve data quality;
- take into consideration the interrelations between the Underwriting Policy, reinsurance arrangements and technical provisions, when providing its opinion;
- report in writing at least annually to the Board of Directors. The reporting should document all material tasks that have been undertaken by the Actuarial Function, and include:
 - i. details of the technical provisions
 - ii. methodologies & assumptions
 - iii. data sufficiency & quality
 - iv. experience analysis
 - v. report to the Board on reliability & adequacy
 - vi. opinion on Underwriting Policy
 - vii. opinion on reinsurance arrangements.

Their report should include any deficiencies identified and give recommendations as to how such deficiencies could be remedied

- contribute to the effective implementation of the risk management system in particular:
 - i. with regard to risk modelling underlying the calculation of the Solvency and Minimum Capital Requirement; and
 - ii. the ORSA process.
- think critically and organise the execution of actuarial approaches
- provide an Actuarial Opinion to the Board of Directors in respect of the ORSA

In establishing the Company's Actuarial Function, the Board of Directors has ensured that the persons involved have the requisite qualifications and demonstrable experience in the area of non-life reserving and are fully conversant with the Solvency II requirements for the calculation of Technical Provisions.

B.7 Outsourcing

All functions and activities of the Company are eligible to be outsourced provided that specific criteria are satisfied in each instance.

The Board is responsible for the approval and termination of all outsourcing arrangements of critical or important functions or activities. Critical or important functions or activities include key functions relating to the Company's System of Governance and all functions within the Company that are fundamental to carry out its core business. The Board is responsible for ensuring notification to the CBI is made in a timely manner prior to the outsourcing of critical or important functions or activities, and thereafter where there have been material developments in relation to the service provider.

The objectives of NICDAC Outsourcing Policy are to ensure that the outsourcing of critical or important operational functions or activities does not lead to:

- Reduction in the Board's responsibility for, or influence over, key functions of the Company;
- Material impairment of the quality of the Company's System of Governance;

Navillus Insurance Company Designated Activity Company

- Any impairment of the Company's ability to meet its regulatory requirements;
- Non adherence to the Company's approved policies and procedures;
- Undue increases in operational risk or cost;
- Material impairment of the Company's ability to fulfil its obligations to stakeholders;
- Conflicts of Interest;
- Breach of the Company's data protection obligations.

The Board is responsible for assessing the risks associated with the outsourcing of critical or important functions or activities, carrying out the appropriate due diligence on the outsourced service provider and for reviewing the performance of outsourced service providers against their agreed and documented Service Level Agreements ('SLA').

The management of the Company is coordinated and carried out at its place of business in Ireland. NICDAC engages outsourced service providers in order to access the expertise and strength and depth of resources necessary to manage the specific requirements of a regulated captive insurance company operating on a global basis.

The following critical or important functions / activities are outsourced:

Critical or important function	Outsourced Service Provider	Jurisdiction
Underwriting administration	Aon Insurance Managers (Dublin) Limited (AIMD)	Ireland
Claims administration	AIMD	Ireland
Finance and accounting	AIMD	Ireland
Compliance Function	AIMD	Ireland
Risk Management Function	AIMD	Ireland
Actuarial Function	Aon UK Limited (Aon UK)	United Kingdom
Internal Audit Function	Aon Commercial Services Ireland Limited	Ireland
Claims handling	A&L Goodbody Zurich (fronted policies) ACE (fronted policies)	United Kingdom and global based on location of claims

B.8 Any other information

The Board is satisfied, based on its assessment of the frameworks which have been established and are in use, that the Company's system of governance is appropriate and adequate for the nature, scale and complexity of the risks inherent in its business operations.

There are no other material items to report in this section.

C. RISK PROFILE

The Risk Appetite Framework adopted by the Board sets out the level of risk that the Company is prepared to accept in the pursuit of its strategic objectives. It sets out:

- the Company's overall philosophy to risk taking and the expectations of shareholders;
- the Company's tolerance to loss of capital, profit volatility and other specified measures; and
- the risk limits that are acceptable in terms of exposures to different types of risk.

The Company's Risk Register combines operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's strategic objectives.

The Board's annual ORSA process is based on the Company's current and expected risk profile over the business planning period and supports the Board in achieving its strategic objectives by taking a structured and combined approach of strategy, risk management and capital management.

C.1 Underwriting risk

The Company has not written any business since the expiry of the Marine, Aviation and Transport Insurance programme on 1 July 2016, Fire and other damage to Property Insurance programme on 30 September 2016 and the General Liability programme on 30 June 2017. The Company seeks to ensure that it has sufficient assets to meet the costs of potential claims over time, but the uncertainty surrounding the severity and frequency of claims can lead to variation in the Company's performance over the short term. Whilst considerable judgment is involved, the Directors ensure that suitable processes are in place to ensure the reliability, sufficiency and adequacy of the statistical and accounting data to be considered on the loss reserving exercises.

As the Company is a captive insurer, it is effectively insured the risks of one customer, its parent group, and thus is exposed to risk concentration. However, diversification is achieved through the varying geographical locations of the underlying risks.

The principal assumptions underlying the Company's estimation of liabilities is that the Company's future claims development will follow a similar pattern to past claims development experience.

The Company manages these risks through arranging for an external qualified actuary to review reserve adequacy of the Company on an annual basis. The Company also monitors emerging issues and factors in their potential impact on the Company's claims reserving.

The Company takes all reasonable steps to ensure that it has appropriate information regarding its underwriting exposures.

Annual support and certification is provided by the Company's Actuarial Function.

As part of the Company's ORSA process, stress and scenario tests incorporating differing claims experience are considered. The impact of the Company experiencing full limit losses totalling USD 4.5m was considered as part of the ORSA carried out in the reporting period. While this scenario resulted in a reduction in the Company's available capital, the regulatory solvency requirements were still achieved.

Sensitivity analysis is also performed for underwriting risks by selecting conservative movements of gross and net claims reserves for financial statements purposes and holding all other assumptions constant.

	Gross claims reserve USD	Net claims reserve USD	Impact on PBT for the year USD
31 December 2019			
Increase in Reserves by 5%	2,050,736	2,050,736	-97,654
Decrease in Reserves by 5%	1,855,428	1,855,428	97,654
31 December 2018			
Increase in Reserves by 5%	3,240,319	3,240,319	-154,301
Decrease in Reserves by 5%	2,931,717	2,931,717	154,301

C.2 Market risk

The risk of future changes in market prices, which would result in devaluation of investable assets, may result from several factors, including, but not limited to, value, liquidity, duration, composition, interest rates, foreign exchange rates and market fluctuations. The Company diversifies its portfolio to reduce the exposure to market fluctuations and market risk concentrations.

NICDAC has an investment strategy in place in line with its Risk Appetite Framework and the related 'Prudent Person' regulatory requirements. The Company endeavours to:

- prudently invest with consideration of the prevailing financial market environment;
- ensure the Company invests appropriately so as not to result in the Company failing to meet its Solvency Capital Requirements;
- ensure that the Company holds assets of sufficient value and liquidity to meet all liabilities as they become due;
- maximise investment return within the levels of risk as defined by the Company's Risk Appetite;
- ensure compliance with the Liquidity Strategy and Policy;
- ensure compliance with the Asset-Liability Management Strategy and Policy; and
- ensure effective risk management of investments at all times, with due consideration of the risks associated with investments and procedures to monitor, manage and report these risks in a timely manner as part of the Company's overall Risk Management System.

Interest rate risk arises on the return on the Company's investments including cash and deposits with credit institutions. The sensitivity analysis of net income to fluctuation in interest rate is shown below:

12-month period	Estimated approximate effects on net income	
Sensitivity Test		
	<i>2019 USD</i>	<i>2018 USD</i>
0.5% increase in market interest rates		
- Pre-tax profit	148,355	230,435
- Shareholders' equity	129,811	28,804
0.5% decrease in market interest rates		
- Pre-tax profit	(148,355)	(230,435)
- Shareholders' equity	(129,811)	(28,804)

The Company is exposed to currency risk to the extent its assets and liabilities are denominated in a currency different from its functional currency. The Company seeks to mitigate currency risk by matching the assets and liabilities which arise in different currencies. The ultimate settlement of loss reserves may be in currencies other than the USD. The Company's exposure to foreign exchange risk arises with respect to Euro.

As part of the Company's 2019 ORSA process, a stress test was performed on the probability of the repayment of the intercompany loan by way of dividend. Under this stress test there was a significant reduction in in the SCR due to the reduction in concentration risk following the repayment of the Intercompany loan.

On 25 September 2019 the Directors recalled the funds from the Intercompany loan and subsequently declared and paid a dividend to the Company Shareholders.

There were no other material changes to the measures used to assess the market risk exposure or the material risks over the reporting period.

C.3 Credit risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. The assets that are exposed to credit risk are:

- Cash and cash equivalents
- Investments and deposits with credit institutions

The Company utilises custodians deemed to be of high credit quality to hold its cash and cash equivalents and deposits with credit institutions and additionally has limits in place in relation to the amount of cash which can be held by any one financial institution.

The Company has Standby Letters of Credit (SLOC's) in place that are used to support technical provisions due to various third party insurance companies (the beneficiaries) under the reinsurance contracts entered into by the Company. The SLOC's are non-collateralised and do not constitute the assets of the Company.

The Company did not purchase any reinsurance in the period.

There were no material changes to the measures used to assess the credit risk exposure or the material risks over the reporting period.

C.4 Liquidity risk

The Company is exposed if proceeds from financial assets are not sufficient to fund obligations arising from its insurance contracts. The Company can be exposed to daily calls on its available investment assets, principally from insurance claims. Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet cash commitments associated with financial obligations.

The Company has determined that liquidity risk does not represent a significant exposure to its business. This assessment is based on the fact that the Company has its investments held in highly liquid assets which it can access immediately or within a very short time frame without incurring material costs or penalties. Investments are in compliance with the Company's investment guidelines.

There were no material changes to the measures used to assess the liquidity risk exposure or the

material risks over the reporting period.

The total amount of expected profits included in the future premiums is Nil as the Company does not expect to underwrite business in the forthcoming year.

C.5 Operational risk

Operational risk is the risk of loss arising from system failure, human error, fraud, or external events. When controls fail to perform, operational risk can cause damage to reputation, have legal or regulatory implications, or can lead to financial loss. The Company have a rigorous control framework and monitoring process in place to manage operational risk. Controls include effective segregation of duties, access controls, authorisation and reconciliation procedures and assessment processes. Outsourced activities are monitored and managed in the same manner in line with the Outsourcing policy.

The Company cannot expect to eliminate all operational risk, but by initiating a rigorous control framework and by monitoring and responding to potential risks, the Company is able to manage the risk.

In addition, NICDAC is subject to Internal and External Audit review.

NICDAC maintains a regulatory dialogue with the CBI to mitigate the risk of any potential sanction or compliance breach as well as using expert, industry leading, service providers to provide its outsourced functions which helps avoid any material error or delay. In order to ensure the quality of the outsourced functions is as high as possible, NICDAC puts in place service level agreements outlining key performance indicators against which its outsourced service providers can be monitored and assessed.

The Company does not consider that it is exposed to material residual risk in this area due to the formality that has been created around the Company's processes and procedures including those for financial and regulatory reporting. There is no specific risk concentration associated with this category as internal controls include appropriate segregation of duties.

There were no material changes to the measures used to assess the operational risk exposure or the material risks over the reporting period.

C.6 Other material Risks

Strategic Risk

Strategic risk is the risk of loss arising from adverse business decisions, improper implementation of decisions, or lack of responsiveness to industry changes i.e. the risk associated with implementing the wrong strategy or failing to correctly implement the chosen strategy.

The control and monitoring actions/principles underlying the strategic risk management of the Company are:

- Review at least annually of the appropriateness of the high level overall objectives for the Company; the major risks facing the Company; the Risk Appetite for each of these major risks identified. The Board of Directors will ensure continuing appropriateness, at least annually and revisions shall be affected where necessary.
- Ensure all plans are regularly reviewed to ensure that Risk Tolerances are not exceeded individually or in total.

Sensitivity Risk

The Actuarial Function assesses annually the sensitivity of its estimate of the Company's unpaid claim liabilities of varying the key assumptions underlying its analysis. Given the nature of the Company's exposures, the key assumptions underlying the actuarial analysis are subject to a range of reasonable interpretations.

No other material risks have been identified.

C.7 Any other information

The identification and spread of Covid-19 subsequent to the year-end is a non-adjusting event; its post year end impact has not been taken account of in the recognition and measurement of the Company's assets or liabilities at 31 December 2019, and in the measurement of assets and liabilities at fair value or in the measurement of the insurance technical provisions.

The Company has not experienced any material adverse financial impact to date, but the global nature of the pandemic's effects has the potential to have a negative impact on the Company's future results or operations. The future impact of the current economic situation is uncertain and difficult to predict. The Board and the Underwriting and Claims Committee are actively monitoring developments and any potential impact on the risk profile of the Company.

There are no other material items to report in this section.

D. VALUATION FOR SOLVENCY PURPOSES

D.1 Assets

NICDAC prepares its financial statements in accordance with the Financial Reporting Council of the UK, including financial reporting standard applicable in UK and Republic of Ireland (FRS 102 & FRS 103), the provisions of the Companies Act 2014 and the European Union (Insurance Undertakings: Financial Statements) Regulations 2015.

NICDAC uses the historical cost convention.

NICDAC has the following classes of assets:

- Deposits other than cash equivalents
- Cash and cash equivalents
- Accrued interest
- Insurance and intermediaries' receivables

Deposits other than cash equivalents represents short term deposits with an original maturity of three months or less and is stated at market value for both solvency and financial statement purposes, the only difference being the inclusion of accrued interest for Solvency II valuation purposes. Accrued interest is disclosed as a separate line item in the financial statements.

Cash and cash equivalents are current accounts with daily liquidity. The Company utilises custodians deemed to be of high credit quality to hold its cash. Carrying amounts approximate fair value due to the high liquidity of the instruments.

A reconciliation of the valuation for Solvency II purposes is as follows:

Asset in USD	Financial Statements	Solvency II	Reclass.	Fair Value Adj.
Deposits other than cash equivalents	12,346,812	12,358,884	+12,072	-
Cash and cash equivalents	933,189	933,189	-	-
Insurance and intermediaries receivables	181,222	-	-	-181,222
Accrued Interest	12,072	-	-12,072	-
Total	13,473,295	13,292,073	-	-181,222

D.2 Technical Provisions

The technical provisions of NICDAC predominantly relate to General Liability (GL) line of business with a small amount of IBNR relating to the Marine, Aviation and Transport Insurance (Marine) line of business. Amounts at 31 December 2019, gross and net of reinsurance, are set out below in USD ('000):

SII Line of Business	Claim Provision	Premium Provision	Best Estimate	Risk Margin	Technical Provisions
General Liability	2,206	-	2,026	246	2,272
Fire & Other Damage to Property	-	-	-	-	-
Marine, Aviation & Transport	9	-	9	1	10
Total	2,035	-	2,035	247	2,282

The increase in the technical provisions from the financial statements amount of USD 1.953M relates to the provision of events not in data, ULAE and expenses, allowance for discounting and the calculated

risk margin. The technical provisions do not include any outwards reinsurance business therefore the gross technical provisions are equal to the net technical provisions.

These amounts comply in all material respects with the relevant Solvency II requirements.

The starting point for the calculation of the Solvency II technical provisions is the amounts which have been calculated for the financial statements reserving basis. Within the financial statements, full provision is made for the estimated cost of all claims notified but not settled at the period-end using the best information available at that time. Provision is made for the cost of claims incurred but not reported and at the period-end, and potential development on outstanding claims estimates (together regarded as IBNR reserves). In addition, an estimate is made for future claims handling expenses relating to claims outstanding at the period-end.

The Company takes all reasonable steps to ensure that it has appropriate information regarding its claims exposures. In estimating the cost of claims notified but not paid, the Company has regard to claims circumstances as reported, any information available from loss adjusters and information on the cost of settling claims with similar characteristics in previous periods. IBNR provisions are established having regard for the results of a valuation on a best-estimate basis by an independent actuary together with a margin for uncertainty which has been determined by management.

Claims projections have been carried out using a range of standard actuarial methods, including the Development Factor Method (DFM), the Bornhuetter-Ferguson method (BF) and the expected claims ratio method (ELR). DFM involves the calculation of loss development factors from historical data, these factors are then used to estimate the ultimate cost for years in which claims are still open. DFM assumes that past development patterns will continue to be appropriate for the future. BF involves a blend of DFM and an expected loss ratio method and is used for long-tail lines of business where data may be insufficient or immature. The frequency/severity method calculates ultimate losses by separately projecting ultimate claim frequency and severity and in this way avoids distortions that may be present in other methodologies as well as providing additional insight on the true drivers of loss experience. For the ELR method, estimated ultimate losses are based upon a prior measure of the anticipated losses, usually relative to a measure of exposure such as premiums, revenues or payroll.

Solvency II requires undertakings to hold technical provisions which correspond to the amount they would have to pay to transfer their (re)insurance obligations immediately to another undertaking. This value comprises a **best estimate** and a **risk margin**, intended to represent a market consistent valuation. The technical provisions take account of the time value of money by discounting using a risk-free interest rate term structure as at the valuation date. There is no allowance for prudence in the calculation of best estimates.

The best estimate is calculated by considering all future cash inflows and outflows required to settle the existing (re)insurance obligations over their lifetime. It represents the mean outcome of all possible scenarios, taking account of how likely they are to occur and their potential variability. In this regard, the best estimate is a probability-weighted average of future cash flows, allowing for the time value of money.

The Solvency II best estimate is calculated gross. The best estimate is made up of a claims provision relating to past and future exposures respectively. Claims payments in the claim provisions have been projected at annual intervals using annual paid development patterns.

Navillus Insurance Company Designated Activity Company

The Solvency II claims provision is equivalent to the expected net present value of the best estimate claims reserve, with additional allowances to allow for all possible outcomes through the inclusion of provisions for Events Not in Data (ENID) and the future expenses that will be incurred in servicing the existing reinsurance obligations. The claims provision also includes all unpaid premium relating to earned exposures that are within payment terms.

NICDAC has not included a calculation for the premium provision for the current reporting period as the Company is not expecting to write any business for the foreseeable future.

Estimates are “best estimates” in the sense that they are intended to be a probability-weighted average of all possible outcomes. NICDAC has employed techniques and assumptions that are appropriate for the purpose of calculating its Solvency II technical provisions. The actual amounts required to meet future claim payments may differ from estimates for a number of reasons, such as model specification error, parameter error and random error due to the inherent uncertainty in insurance. External environment risk factors may cause material deviations in estimates of technical provisions, including persistent negative interest rates, inflation and currency exchange rate fluctuations.

The Solvency II risk margin is intended to represent an amount that NICDAC would be required to pay, in excess of the best estimate of the liabilities, for a third party to assume the risk of running of the existing liabilities. The actuarial calculation of the risk margin is consistent with the Solvency II regulations, applying a 6% cost of capital to the amount of capital required at the beginning of each year to support the run-off of the insurance obligations. These future costs of capital are then discounted to the valuation date and summed to calculate the amount of risk margin required.

The resultant differences between the value of technical provisions for solvency purposes and the financial statements at 31 December 2019 are shown below (USD'000):

	Gross/Net
Claims provisions on financial statements basis	
	1,953
Solvency II Expenses	464
Provision for Events Not In Data & ULAE	39
Unpaid recovered losses	(181)
Allowance for Discounting	(240)
Solvency II claims provisions (ex. Risk Margin)	2,035
Risk Margin	
Solvency II claims provisions	247
	2,282

Information on how the Company manages risk in the area of underwriting and reserving is set out in Section C1 above. Operational risks relating to the Company's technical provisions and claims data are managed using the Control Framework described in Section B4 above.

The Company is satisfied that it has access to sufficient historical claims data on an annual basis for the calculation of its technical provisions and that this data is accurate and appropriate for the Company's needs. Claims management processes by the Company are appropriate and adequate given the nature of the underlying risks. Significant reporting delays are not experienced.

In calculating its technical provisions on a Solvency II basis, NICDAC has not applied any of the following items:

- matching adjustment referred to in Article 77b of Directive 2009/138/EC;

- volatility adjustment referred to in Article 77d of Directive 2009/138/EC;
- transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC; and
- transitional deduction referred to in Article 308d of Directive 2009/138/EC.

D.3 Other liabilities

Other liabilities are classified into USD54,917 of Payables (trade, not Insurance) which relates to Corporation tax payable for the current year and USD162,852 of other liabilities, not elsewhere shown for solvency purposes and relates to accrued expenses and held at the lower of cost or market value / realisable value. There is no deferred tax liability in the financial statements or solvency II balance sheet as the Company is not writing any new business and future profits are not likely to be sufficient to offset losses in a reasonable timescale.

D.4 Alternative methods for valuation

No alternative methods were used.

D.5 Any other information

There is no other information to report.

E. CAPITAL MANAGEMENT

E.1 Own funds

The Company has put in place a Capital Management policy to ensure that 'Own Fund' items, both at issue and subsequently, meet the requirements of the Solvency II capital regime. The objectives of the policy are to ensure that, on an on-going basis, the Company has:

- own fund items available to meet its capital requirements; and
- developed processes to ensure the appropriateness of its own fund items.

On an annual basis the Company reviews the level, composition and classification of own fund items to ensure they continue to meet its own solvency needs, and its regulatory obligations in respect of Solvency Capital Requirement (SCR) and Minimum Capital Requirement (MCR). A 3 year forward looking time horizon is used for business planning purposes and any anticipated changes to the Company's business and risk profile are factored into the ORSA process to assess the solvency and capital needs over this business planning period. It is intended that the Company's capital needs will be managed out of its existing pool of own funds and the efficient management of the Company's reinsurance business. Should additional funds be required outside of that, they will be advanced by the shareholder. There have been no material changes to this approach from the prior year.

The Company's own funds consist of the following items:

- Called up share Capital;
- Capital Contribution;
- Retained Earnings; and
- Other Ancillary own funds.

Any change to the share capital requires the approval of the Shareholder and the Board. Retained earnings are adjusted quarterly to take account of the profits/losses earned in the period together with any Solvency II valuation adjustments on a quarterly basis.

The payment of dividends is considered on an annual basis by the Board as part of its medium-term capital assessment. Potential dividends will be considered as part of the Company's ORSA process to ensure that the Company will continue to meet its solvency needs over the business planning period. In September 2019, NICDAC's Board of Directors declared and paid a dividend to NICDAC's shareholders, Baxalta US Inc, in the amount of USD 35m. The dividend was funded from the intercompany loan held with Dyax Corp of USD 30m and USD 5M from the short-term deposit account held with Danske Bank.

Any other qualifying own fund item requires the review and approval of the Board. In such instances, the Board must ensure that the terms and conditions of any own fund item are clear and unambiguous in relation to the capital classification.

Own fund items at the end of reporting period and the prior year comparative period are as follows:

Navillus Insurance Company Designated Activity Company

	2019 USD	2018 USD
Ordinary called up share capital	1,250,000	1,250,000
Other own fund Items (Capital Contribution)	7,000,000	7,000,000
Reconciliation Reserve	2,542,437	36,014,206
Total Tier 1 capital	10,792,437	44,264,206
Other ancillary own funds – Tier 2 capital	1,411,098	11,096,688
Total basic own funds	12,203,535	55,360,894

The reconciliation reserve represents the Company's retained profits as adjusted for Solvency II valuation principals. The adjustments which arise in the application of these principles are shown in the equity reconciliation below.

At the end of the current reporting period eligible own funds available to meet the Company's SCR and are USD 12,203,535 comprised of USD 10,792,437 Tier 1 capital and USD 1,411,098 Tier 2 capital. Eligible own funds available to meet the Company's MCR are USD 10,792,437, comprised solely of Tier 1 capital.

The equity position as shown in the Company's 2019 period-end financial statements can be reconciled to the basic own funds balance under Solvency II as follows:

	2019 USD
Equity per the Company's financial statements	11,302,902
Adjustments to technical provisions	(328,784)
Discounting of Balance Sheet Liabilities	(459)
Reallocation of insurance creditors & debtors to technical provisions	(181,222)
Capital Commitment Deed	1,411,098
Own funds	12,203,535

Adjustments are made to technical provisions in line with the valuation methodologies set out in section D.2 above. Accrued liabilities including Tax have been discounted. These adjustments are reflected in the Company's reconciliation reserve.

NICDAC has ancillary own funds (Tier 2) which impacts the capital calculations by increasing the eligible own funds by 50% of the calculated SCR. The Company entered into a Capital Commitment Deed with its shareholder on 18 December 2015 whereby funds covering up to 50% of the Solvency Capital Requirement of the Company at any given time can be called upon. The Company made an application to the Central Bank of Ireland in 2015 in order to have the Capital Commitment Deed treated as an ancillary own fund (Tier II capital) item and received approval of the application in April 2016 from the Central Bank of Ireland. The available capital to meet the SCR includes the calculation for the Tier II capital.

E.2 Solvency capital requirement and minimum capital requirement

At the end of the current reporting period, NICDAC SCR and MCR have been calculated as USD 2,822,197 and USD 4,150,253.

Navillus Insurance Company Designated Activity Company

The SCR is intended to correspond to the capital the Company needs to hold in order to limit the probability of ruin, in the following 12 months, to 0.5%, i.e. ruin would occur less than once in every 200 years. The SCR calculated at the end of the current reporting period, relates to the capital required to support the business over the prospective 12 months; covering existing liabilities. Based on the Company's eligible own funds of USD 12,203,535 (Tier 1 and Tier 2 Capital), the Company has a solvency ratio at 31 December 2019 of 432%. However, as MCR is higher than SCR, the solvency capital requirement should be considered on the MCR and the solvency ratio of 294%.

The SCR has been calculated using the standard formula and without the application of any undertaking specific parameters.

The split of SCR by risk modules is shown below, together with the prior year comparative:

Risk Charge	2019 USD'000	2018 USD'000	Change USD'000
Non-Life Underwriting Risk	604	986	(383)
Counterparty Default Risk	63	74	(12)
Interest Rate Risk	23	645	(622)
Equity Risk	-	-	-
Spread Risk	173	1,143	(970)
Currency Risk	53	40	13
Property Risk	-	-	-
Concentration Risk	2,518	21,762	(19,245)
<i>Diversification Benefit</i>	(241)	(1,788)	1,546
Market Risk	2,525	21,803	(19,277)
<i>Diversification Benefit</i>	(430)	(773)	343
BSCR	2,761	22,090	(19,329)
Operational Risk	61	103	(42)
SCR	2,822	22,193	(19,371)
Available Capital to meet SCR	12,204	55,361	(43,157)
Surplus/(Deficit)	8,053	33,168	(25,114)
Solvency Ratio	432%	249%	183%
MCR	*4,150	5,548	(1,398)
Available Capital to meet MCR	*10,792	44,264	(33,472)
Revised SCR	*4,150	22,193	(18,043)
Surplus/(Deficit)	6,642	22,071	(15,429)
Revised SCR Solvency Ratio	260%	249%	11%

*At the 31 December 2019, the MCR requirement is higher than the SCR requirement, therefore MCR requirement defaults as being the minimum capital amount required. This is due to the Intercompany loan been recalled during the period which had a material effect on the SCR due to the significant decrease in the market risk charge.

The premium and reserve risk charge has decreased due to the release of reserves following the better than expected claims experience over the last year. The net claims provision has decreased by USD 1.4m, resulting in a lower reserve risk charge. NICDAC has no exposure to catastrophe risk and has not written

any new business since the last active policy was cancelled on 30 June 2017. Therefore, the Company is not exposed to any premium risk, catastrophe risk or lapse risk charges.

Counterparty Default Risk: The decrease in counterparty default risk is due to reduction in cash at bank assets which have reduced.

The MCR is calculated through a prescribed formula based on the net technical provisions (excluding the risk margin) and net written premium. It is also constrained to be between 25% and 45% of the SCR. Further to this, SI 485 sets out absolute minimum MCR values for non-life and life insurers, reinsurers and captives. In the case of NICDAC, as a non-life captive insurer this absolute floor is EUR 3,700,000. Having carried out the calculations and applied the relevant limits, the resultant MCR for the Company is USD 4,150,253.

E.3 Use of duration-based equity risk sub module in calculation of the solvency capital requirement

There was no use of duration-based equity risk sub module in the calculation of the SCR.

E.4 Differences between the standard formula and any internal model used

NICDAC used the standard formula in determining its SCR and MCR and did not rely on any internal model.

E.5 Non-Compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

There are no instances of non-compliance with the MCR and SCR.

E.6 Any other information

There is no other information to report.

<i>Note: Tables within this report contain minor rounding differences in certain instances due to amounts being displayed as whole numbers or in thousands while the source workings underlying the annual reporting templates are calculated to two decimal places. These differences are immaterial.</i>
