INTRODUCTION

Standard Trane Insurance Ireland DAC ("Standard Trane", 'STIIDAC', 'the Company') has prepared this Solvency Financial Condition Report in accordance with the regulations set out in Articles 290-298 of the Solvency II Delegated Acts together with the Guidelines on reporting and public disclosure issued by EIOPA.

SUMMARY

This Report refers to the business of Standard Trane Insurance Ireland DAC, a captive insurer, authorised and supervised by the Central Bank of Ireland. It provides the reader with information on the Company's business and performance, system of governance, risk profile, valuation for solvency purposes and capital management for the reporting period ended 31 December 2020.

The Company has not renewed any insurance policies since 30 November 2007. When actively trading, the Company provides insurance cover for affiliated companies of Trane Technologies plc (formerly Ingersoll-Rand plc), a global industrial company headquartered in Ireland, in respect of marine, property and miscellaneous financial loss. Investment of Company funds is in line with the documented investment strategy, reflecting a 'prudent person' approach to the management of counterparty, concentration, interest rate and currency risk.

The Board has identified the key risks to which STIIDAC is exposed and established appropriate corporate governance, risk management and reporting mechanisms to ensure that the identified risks remain relevant, and that they are managed and reported on with appropriate levels of detail and frequency. The Company has established a comprehensive suite of risk policies and implemented a series of internal controls to ensure that STIIDAC can be managed in accordance with its governance and risk management systems. Documented escalation mechanisms are in place to ensure that any breaches in risk limits and tolerances, internal controls and governance requirements can be reported promptly to the appropriate individuals.

Risks to which the Company is exposed are well understood and are used to determine the level of solvency and capital required over a forward looking three-year business planning period. The results of this exercise are used to better inform decision making within the Company.

There were no material changes to STIIDAC's business and performance, system of governance, risk profile, valuation for solvency purposes and capital management over the reporting period.

The Solvency II Solvency Capital Requirement (SCR) of the Company has been calculated to be USD652k (2019:USD472k) and the Minimum Capital Requirement (MCR) as USD3.071k (2019:USD2.809k) based on the Company's Balance Sheet as at 31 December 2020; resulting is a Solvency Ratio of 105% (2019:110%) based on the available capital of USD3.224k (USD3.092k), which is in line with the Company's risk appetite. The Board of Directors is satisfied that the Company has adequate and appropriate capital to support its business plans. There were no instances of non-compliance with the capital requirements during the period.

A. BUSINESS & PERFORMANCE

A.1 Business

Standard Trane Insurance Ireland DAC was incorporated in Ireland in 2002 and in line with the requirements of the Companies Act 2014 converted to a designated activity company (DAC), limited by shares, effective 23 December 2015. The principal activity of the Company is the provision of insurance, for marine, property and miscellaneous financial loss, to affiliated companies of Trane Technologies plc (formerly Ingersoll-Rand plc). STIIDAC is a captive insurance undertaking, underwriting only the risks of its parent group.

The Company is a wholly owned subsidiary of Trane Technologies Irish Holdings Unlimited Company (formerly Ingersoll-Rand Irish Holdings Unlimited Company), an Irish company, and its ultimate parent is Trane Technologies plc (formerly Ingersoll-Rand plc). The Company's ownership structure is as below:

The operation of the Company is subject to the local regulatory requirements in Ireland within which it operates. Such regulations not only prescribe approval and monitoring of activities but also impose certain restrictive provisions, for example capital adequacy to minimize the risk of default and insolvency on the part of the Company to meet unforeseen liabilities as they arise.

Standard Trane incorporated in Ireland and is licensed by the Central Bank of Ireland ('CBI') as a captive insurance undertaking. The insurance supervision division at the CBI may be contacted at their offices in New Wapping Street, North Wall Quay, Dublin 1, Ireland. STIIDAC conducts all its business from its offices in Ireland.

Mazars is the appointed external auditor of the Company and is located at Harcourt Centre, Block 3 Harcourt Road, Dublin 2, Ireland.

The Company has not renewed any insurance policies since 30 November 2007. When actively trading, the Company is engaged exclusively in the underwriting of insurance risks of various firms in the Trane Technologies network.

The directors have assessed the going concern impact of COVID-19 on the Company's operations through conducting a rigorous assessment of the potential risk outcomes. The potential risks impacting the Company include: commercial, operational and economic risks. These factors have been considered by the directors as part of the Company's annual Own Risk and Solvency Assessment process, with the likely financial impact on profitability and solvency assessed in terms of the going concern basis of preparation of the financial statements.

As at year end the Company's net asset position is US\$3,224k and solvency coverage ratio is 105%. By virtue of the strength of its net asset position, the directors have concluded that there is a reasonable expectation that the Company has adequate resources to continue in operational existence for a period of no less than 12 months from the date of approval of these financial statements. Furthermore, the directors are not aware of any material uncertainties that may cast significant doubt upon the Company's ability to continue as a going concern. Thus, they continue to adopt the going concern basis in preparing the annual financial statements.

There have been no significant events during the reporting period which have had a material impact on the Company.

The Company has no employees and no remuneration was therefore paid.

A.2 Underwriting Performance

Standard Trane has not renewed any insurance policies since 30 November 2007, due to group restructuring, which resulted in most of the insured entities being sold off. Since then, however, the Directors have remained open to writing new insurance policies in the future, thus view the Company as a going concern.

A.3 Investment Performance

In line with the Company's documented investment policy, the Company allocates its investment portfolio in cash and short-term deposits. Income arising from investment activities for the reporting period was USD\$17k (2019: USD\$67k).

The Company has no investments in securitised asset classes and all investment income is recognised in the Company's income statement.

A.4 Performance of other activities

STIIDAC does not engage in any activities other than those associated with captive insurance and has not entered into any leasing agreements.

A.5 Any other information

Marsh Management Services (Dublin) Limited (MMSD), of which Mr Gerard Connell an employee acted as director to the company during the year. A management fee is paid by Standard Trane to

MMSD for services provided. MMSD replaced Aon Insurance Managers (Dublin) Limited as captive managers in February 2020.

Since the start of 2020 there has been an outbreak of a new virus, the Coronavirus (Covid-19). On 11 March the World Health Organisation declared the outbreak a pandemic. Many countries including Ireland have reacted to contain and delay the spread of the virus. The board is monitoring the developing situation and assessing the commercial, operational and economic risks to the business as part of their ongoing risk management. The government guidance is being applied to ensure the ongoing health and wellbeing of our staff and clients is maintained.

B. SYSTEM OF GOVERNANCE

B.1 General information on the system of governance

In order to meet the requirements for sound corporate governance, ensure efficient conduct of business and to protect the interests of the Company's stakeholders, the Company has a comprehensive Governance and Risk Management system in place.

The Board of the Company acknowledges its responsibility to ensure that risks are fully understood and appropriately managed and has taken appropriate steps to ensure that risk management, reporting and control processes have been put in place in a manner which reflects the nature and scale of the captive's activities.

The Governance and Risk Management System of the Company may be described as relying on four cornerstones:

- 1) Governance Framework, aligned with the Company's strategic objectives, providing top level oversight by the Board, clear ownership and accountability for risks, as well as clear escalation and reporting channels.
- 2) Risk Management Framework, which details the Company's strategic objectives in documented Risk Policies. For each risk, limits and operational checkpoints as well as functional identification, mitigation and monitoring processes are documented.
- 3) A series of Internal Controls, defining the architecture of processes required to manage the Company in accordance with its governance and risk management framework.
- 4) A Risk Register combining operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's global strategy objectives.

There have been no material changes to this structure in the period. Standard Trane implemented the above framework in advance of the inception of Solvency II to ensure compliance.

Given the limited scale and complexity of the Company, and having reviewed the risks facing the Company thoroughly, the Board are satisfied that the current system of governance in place is adequate.

The various functions assisting the Board, including the Compliance Function, have defined lines of reporting directly to the Board. In relation to any violation of relevant law by the Company the Compliance Function as well as reporting to the Board, will, in certain circumstances, also be required to report to outside bodies such as the Central Bank of Ireland.

The Board undertake responsibility for performing the equivalent function of an Audit Committee in relation to the reporting period ended 31 December 2020.

Key Functions

The key functions of Risk Management, Internal Audit, Actuarial, Compliance and Operations have clear and defined lines of reporting directly to the Board. This is facilitated by the straightforward nature of the Company's structure and fit-for-purpose documented policies and procedures which are clearly communicated and well understood by all relevant parties. The Board has ensured that the key functions are appropriately resourced and have the necessary authority and operational independence to perform their roles. The Company engaged Marsh Management Services (Dublin) Limited ('MMSD') for the provision of management services, under the terms of an outsourced service and management agreement which is overseen by the Board of Directors.

Remuneration and material transactions

The members of the Board of Directors receive no remuneration for their services as directors to the Company. There are no employees and consequently no remuneration is paid.

Other than transactions which arise in the normal course of business, the Company had no other material transactions during the reporting period with members of the shareholder group and none with members of the Board of Directors, apart from that disclosed in section A5 above.

B.2 Fit and proper requirements

The 'Fit and proper' requirement is the standard required by the Central Bank of Ireland when appointing pre-approved controlled function holders. Standard Trane has documented its Fitness & Probity policy setting out the Company's approach to the selection and assessment of the persons who effectively run the Company or are responsible for other key functions.

In selecting individuals as directors or function holders, the Company takes account of the following factors:

- specific requirements of the role
- the skills, experience and relevant qualifications of the proposed individual
- results of due diligence enquiries
- conflicts of interest
- time requirements and other commitments
- competence and integrity
- financial soundness

Consideration is given to ensuring an appropriate mix of knowledge, skills and experience across the Board of Directors and for those roles where specialist skills are required e.g. Head of Actuarial Function, only those individuals possessing the pertinent qualifications and expertise will be considered.

Standard Trane is satisfied that appointed individuals performing controlled functions meet all relevant regulatory requirements and have a suitable level of training and qualification in order to enable them to carry out their respective duties.

For those roles which are prescribed by the CBI as Controlled Functions (CFs) and Pre-approval Controlled Functions (PCFs), the Compliance function adopts appropriate control and due diligence processes in the selection and vetting of such individuals to ensure that they meet the regulator's fit and proper criteria. Written approval from the CBI is obtained prior to the appointment of PCFs. Appointed individuals are required to maintain on-going compliance with the Standards of Fitness & Probity and the guidance issued by the CBI. This is assessed by the Company on an annual basis.

B.3 Risk Management System including the own risk and solvency assessment

The Company's Risk Management System:

- sets out the level of risk acceptable by the Company (Risk Appetite and risk tolerance);
- identifies the risks which represent a threat to the achievement of its strategic objectives;
- identifies, defines and regularly measures key risk indicators enabling an efficient monitoring of risks;
- defines the appropriate actions to reduce the Company's risk exposure;
- ensures the risk management framework is implemented in day-to-day business processes; and
- regularly reviews controls and mitigation actions to ensure that they remain relevant and effective.

In order to achieve these objectives, the Risk Management System of the Company has been clearly documented and specified through specific risk management policies for each key risk category. Should the Company decide to reactivate, its key risks will change significantly. However, as the Company currently writes no business, the key risk categories for which it has set up specific control and monitoring mechanisms are:

- Asset Liability Management ("ALM")
- Investment
- Liquidity and concentration
- Operational
- Strategic

In addition to these, an outsourcing policy defining the key rules and criteria to be followed by each service provider has been determined.

Own Risk and Solvency Assessment

Standard Trane performs an Own Risk and Solvency Assessment ('ORSA') process annually in order to provide its Board of Directors with a forward-looking risk and capital assessment. The adequacy of the available capital, the Risk Appetite Framework and the appropriateness of the risk limits is assessed for the business planning period, considering the evolving risk profile. To this end, risks and scenarios

to which the Company is exposed during the business planning period and which may affect the capacity to meet its insurance obligations or pose a threat to the achievement of its business objectives are taken into account. The approach used by the Company may be summarised as follows:

Define the Stress Scenarios

Stress testing and scenario analysis are used to assess whether the available and future capital are sufficient in expected and stressed situations. The appropriateness of the risk limits is also assessed by stress testing and sensitivity analysis.

Stress the Financial Plan

Stress test scenarios are embedded into the projected financial plan under Solvency II GAAP. Related SCR/MCR and solvency ratios are then calculated for each year, resulting in the Stressed Financial Plan and the solvency impact of validated scenarios. The tasks of this process are conducted by the Actuarial Function and validated by the Risk Management Function.

Assess prospective solvency needs on the basis of the Stressed Financial Plan

The Risk Management Function identifies potential additional mitigation actions to reduce the potential impact of the Stress Scenarios. The main purpose of this stage is to identify and assess any relevant complementary controls, mitigation actions or review of the Risk Appetite in order to match prospective solvency needs with capital position. Any remaining solvency gap will be covered through a relevant capital plan, i.e. defining the measures to restore the Company's solvency margin should the assumed scenarios occur.

Produce the ORSA Report

The ORSA report will bring clarity over projected risk assessments and solvency needs to different stakeholders through dedicated sets of information in line with their expectations. The ORSA report is reviewed and approved by the management annually.

The ORSA report provides clarity over projected risk assessments and solvency needs to three different stakeholders:

Stakeholder	Expectation	ORSA Report
Board of Directors	Matching projected risks vs the Risk Appetite framework.	Provides a clear and prospective understanding of critical risk exposures and their relationship with Risk Appetite boundaries.
Shareholders	Detailed and prospective understanding about the risk of bankruptcy and potential need for future additional capital.	Provides a plan for capital needs on the time horizon of the financial planning.

Supervisory Authority	Detailed and prospective understanding of potential ORSA deviations compared to solvency capital requirements	Gathers information about: projected Solvency ratios; - explanations about deviations due to specific critical risks exposures.
-----------------------	---	---

The ORSA-Process described above ensures that ORSA is integrated into the decision-making and business planning process. Furthermore, monitoring procedures as set out in the risk management policies ensures that risk exposures are measured on a regular basis triggering exception reports for the Board.

In line with CBI requirements, the Head of Actuarial Function has provided an Actuarial Function report to the Board of Directors, which incorporates the results of the ORSA. Following feedback and approval from the Board, the Company's ORSA report is finalised and results submitted to the CBI within 2 weeks.

The capital risk appetite for Standard Trane is to sustain its capital at a level sufficient to meet the Solvency Capital Requirement (SCR) and Minimum Capital Requirement (MCR) at all times. As the Company currently does not write any business, its MCR is greater than its SCR and so, unlike most companies, the MCR becomes the relevant requirement. The Board of Directors maintains a prudent approach to capital to ensure that STIIDAC is in a comfortable position to meet this obligation.

Should Standard Trane find itself in the position where capital would need to be replenished, the shareholder would provide additional capital to ensure that SCR/MCR compliance can be demonstrated. Given the continued strength of its financial performance, Trane Technologies is expected to continue to have ample capacity to provide this support to Standard Trane.

B.4 Internal Control System

The Internal Control System embedded in the Company's operations is a mix of processes undertaken by all stakeholders within the Company to provide reasonable assurance that the strategic objectives will be achieved.

In order to achieve the aforementioned objectives, the Internal Control framework of the Company is structured around five complementary components.

Component	Contents
1) Control environment	A strong "risk and control" culture is embedded within the Company's operations through the continuous oversight of the Board of Directors and the communication to all internal stakeholders of all governance and risk principles through the Company's governance manual.

2) Risk assessment	Procedures and policies are detailed and formalised in order to disclose the way of identifying, managing, controlling, mitigating and reporting issues relating to each risk category.
3) Reporting channels	Clear and structured reporting processes are in place enabling the Board of Directors to have access to relevant, complete, reliable, correct and timely communication related to internal as well as external events.
4) Monitoring process	The appropriate escalation of significant issues to the Board of Directors, the ongoing involvement of all internal stakeholders as well as the Internal Audit process enables the Company to continuously monitor and adapt when necessary its Internal Control System.
5) Control activities	The Company has developed a comprehensive set of preventive, detective or corrective control actions embedded in its daily operations.

In order to set out how the Internal Control System is implemented, the Company's processes and related control activities are documented, monitored and reviewed on a regular basis.

These items are designed by the Risk Management Function, approved by the Board of Directors and evaluated by the Internal Audit Function. They are reviewed as often as necessary but at least annually.

Compliance Function

The Compliance Function is an integral component of the Company's governance system. The Company has a dedicated Head of Compliance reporting to the Board of Directors.

The responsibilities of the Compliance Function include:

- utilisation of compliance management practices that contribute to the use of sound, responsible and sustainable business practices by the Company;
- presentation of an annual compliance plan to the Board of Directors, outlining specific areas which it will focus on during a particular year;
- promotion of a culture of compliance within the organisation;
- maintenance of a comprehensive compliance risk management control and reporting system in conjunction with the Risk Management Function to assist in managing the compliance risk faced by the Company;
- consideration of possible future changes in the legal environment and their potential effect on the Company as well as providing regular compliance and regulatory updates to the Board of Directors;
- identification and communication throughout the Company the laws, regulations and codes of conduct to which the Company is subject and assisting to embed compliance with these in the way the Company does business; and
- investigation and follow up of compliance breaches, ensuring timely reporting to the Board and in certain circumstances to outside bodies such as the CBI.

B.5 Internal Audit Function

Purpose and Objectives

The purpose of the Internal Audit Function is to serve as an independent function that objectively evaluates and recommends improvements with respect to the Company's Internal Control System by facilitating an objective and independent assessment of the processes and controls in place.

It assists the Company in accomplishing its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes employed by the Company. The audit approach is risk based and in line with an annual audit plan which is provided by the Head of Internal Audit to the Board of Directors.

The Internal Audit Function and the appointed Head of Internal Audit report directly to the Board of Directors.

Independence and Impartiality

The Company's Internal Audit Function has been established to be independent of the activities audited, the operational functions and the Board of Directors.

The Internal Audit Function is free to report its findings and appraisals and to disclose them to the Board as required. This principle of independence the Internal Audit Function entails that Internal Audit Function operates under direct control of the Board of the Company.

B.6 Actuarial Function

The Actuarial Function is carried out by Marsh Ltd providing a named individual as the Head of Actuarial Function (HoAF).

Role and Responsibilities of the Actuarial Function include the below, some items listed are not required in years where no business is underwritten:

- coordination of the calculation of technical provisions in conjunction with other outsourced actuarial resources;
- identify any inconsistency with the requirements set out in Articles 76 to 85 of the Solvency II Directive for the calculation of technical provisions and propose corrections as appropriate;
- ensuring the appropriateness of the methodologies, underlying models and assumptions made in the calculation of technical provisions;
- explain any material effect of change of data, methodologies or assumptions between valuation dates on the amount of technical provisions if already calculated on a Solvency II basis;
- assess the consistency of the internal and external data used in the calculation of technical provisions against the data quality standards as set out in Article 82 of the Solvency II Directive. Where relevant, the Actuarial Function will provide recommendations on internal procedures to improve data quality so as to ensure that the undertaking is in a position to comply with the related Solvency II requirements when implemented;
- calculation of the Solvency and Minimum Capital Requirements at the balance sheet date;

- ensuring results of technical provisions can efficiently feed into solvency capital calculations and Quantitative Reporting Templates (QRTs) on both a quarterly and annual basis;
- report in writing at least annually to the Board of Directors. The report should document all material tasks that have been undertaken by the Actuarial Function, and include:
 - i. Details of the Technical Provisions
 - ii. Methodologies & assumptions
 - iii. Data sufficiency & quality
 - iv. Experience analysis
 - v. Report to the Board on reliability & adequacy
 - vi. Opinion on the Technical Provisions
 - vii. Opinion on Underwriting policy
 - viii. Opinion on the ORSA
 - ix. Opinion on Reinsurance arrangements
 - x. Any deficiencies identified and give recommendations as to how such deficiencies could be remedied.
- contributing to the effective implementation of the Risk Management System, in particular:
 - i. with regard to risk modelling underlying the calculation of the SCR and MCR;
 - ii. contribute to the ORSA process;
 - iii. think critically and organise the execution of actuarial approaches.

The HoAF should meet all the following criteria:

- be a duly qualified Actuary;
- have experience of more than five years in the field of insurance and/or reinsurance.

The Head of Actuarial Function is a pre-approval-controlled function (PCF) under the Central Bank Reform Act 2010 (section 20 & 22) Regulations 2011.

B.7 Outsourcing

The objectives of Standard Trane's Outsourcing Policy are to ensure that the outsourcing of critical or important operational Functions or activities does not lead to:

- Reduction in the Board's responsibility for, or influence over, key Functions of the Company;
- Material impairment of the quality of the Company's System of Governance;
- Any impairment of the Company's ability to meet its regulatory requirements;
- Non-adherence to the Company's approved policies and procedures;
- Undue increases in operational risk or cost;
- Material impairment of the Company's ability to fulfil its obligations to stakeholders, nor impede effective supervision by regulators;
- Conflicts of Interest;
- Breach of the Company's data protection obligations.

All functions and activities of the Company are eligible to be outsourced provided that each of the criteria detailed are satisfied in each instance. Sub-outsourcing is allowable only in exceptional

circumstances, on the condition that the sub-outsourced service provider satisfies the above criteria and subject to approval from the Board of Directors.

The Board is responsible for the approval and termination of all outsourcing arrangements of critical or important functions or activities. Critical or important functions or activities include key functions relating to the Company's system of Governance and all functions within the Company that are fundamental to carry out its core business. The Board is responsible for ensuring notification to the CBI is made in a timely manner prior to the outsourcing of critical or important functions or activities, and thereafter where there have been material developments in relation to the service provider.

The Board is responsible for assessing the risks associated with the outsourcing of critical or important functions or activities, carrying out the appropriate due diligence on the outsourced service provider and for reviewing the performance of outsourced service providers against their agreed and documented Service Level Agreements ('SLA').

The management of the Company is coordinated and carried out at its place of business in Ireland. STIIDAC engages outsourced service providers in order to access the expertise and strength and depth of resources necessary to manage the specific requirements of a regulated captive insurance company operating on a global basis.

The following critical or important functions / activities are outsourced:

Critical or important function	Outsourced Service Provider	Jurisdiction
Underwriting/claims administration	N/A (if reactivated, MMSD)	Ireland
Finance and accounting	MMSD	Ireland
Compliance Function	MMSD	Ireland
Actuarial Function	Marsh Limited	United Kingdom
Internal Audit Function	Trane Technologies	Belgium and Ireland
Investment and administration	MMSD	Ireland

B.8 Any other information

The Board is satisfied, based on its assessment of the frameworks which have been established and are in use, that the Company's system of governance is appropriate and adequate for the nature, scale and complexity of the risks inherent in its business operations.

There are no other material items to report in this section.

C. RISK PROFILE

The Risk Appetite Framework adopted by the Board sets out the level of risk that the Company is prepared to accept in the pursuit of its strategic objectives. It sets out:

- the Company's overall philosophy to risk taking and the expectations of shareholders; • the Company's tolerance to loss of capital, profit volatility and other specified measures; and
- the risk limits that are acceptable in terms of exposures to different types of risk.

The Company's Risk Register combines operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's strategic objectives.

The Board's annual ORSA process is based on the company's current and expected risk profile over the business planning period and supports the Board in achieving its strategic objectives by taking a structured and combined approach of strategy, risk management and capital management.

C.1 Underwriting risk

Standard Trane has not written any business since November 2007 and all insurance liabilities have been settled. The Company has obtained an exemption from the Central Bank of Ireland in relation to the requirement to conduct an actuarial evaluation in relation to claims reserves.

C.2 Market risk

The risk of future changes in market prices, which would result in devaluation of investable assets, may result from several factors, including, but not limited to, value, liquidity, duration, composition, interest rates, foreign exchange rates and market fluctuations.

STIIDAC has an investment strategy in place in line with its Risk Appetite Framework and the related 'Prudent Person' regulatory requirements. The Company endeavours to:

- prudently invest with consideration of the prevailing financial market environment;
- ensure the Company invests appropriately so as not to result in the Company failing to meet its Solvency Capital Requirements;
- ensure that the Company holds assets of sufficient value and liquidity to meet all liabilities as they become due;
- maximise investment return within the levels of risk as defined by the Company's Risk Appetite;
- ensure compliance with the Liquidity Strategy and Policy;
- ensure compliance with the Asset-Liability Management Strategy and Policy; and
- ensure effective risk management of investments at all times, with due consideration of the risks associated with investments and procedures to monitor, manage and report these risks in a timely manner as part of the Company's overall Risk Management System.

Interest rate risk is the risk that the value of future cash flows of a financial instrument will fluctuate because of changes in interest rates. The company manages interest rate risk, in accordance with its policy on managing credit risk (below).

Standard Trane Insurance Ireland DAC

The Company is exposed to currency risk to the extent its assets and liabilities are denominated in a currency different from its functional currency. The Company's reporting currency is USD. As it is domiciled in Ireland, and currently does not write any business, its transactions are mainly carried out in Euro with a small amount in US Dollars (US\$). The company has a Euro bank account which had a balance of EUR 6,589 as at 31 December 2020 (2019: EUR 25,107). This account is maintained with a minimum Euro balance, which is held to cover any Euro payments, with transfers made from the USD account as required.

Regarding concentration risk, the Company has two counterparties that are subject to concentration risk. The rating of counterparties (Citibank and BNP Paribas) is reviewed every quarter. The overall concentration risk charge in the solvency capital calculation is \$649k.

C.3 Credit risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. The assets that are exposed to credit risk are:

Cash and cash equivalents

The Company has identified credit risks associated with the cash and deposits it has placed with third party banking and investing institutions. The Company manages these risks by establishing an investment policy which is reviewed on a regular basis by the Board.

Deposits with Credit Institutions.

Deposits with credit institutions comprise short term fixed deposits with an original maturity of three months or less the withdrawal of which are subject to time restrictions. Carrying amounts approximate fair value due to the short-term nature and high liquidity of the instruments.

C.4 Liquidity risk

The Company is exposed if proceeds from financial assets are not sufficient to fund obligations. The Company can be exposed to daily calls on its available investment assets, principally from insurance claims if it reactivates. Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet cash commitments associated with financial obligations.

The Company has determined that liquidity risk does not represent a significant exposure to its business. This assessment is based on the fact that the Company has its investments held in highly rate deposits which the Company deems to be very liquid. Investments are in compliance with the Company's investment guidelines.

There is no expected profit included in future premiums calculations.

C.5 Operational risk

Operational risk is the risk of loss arising from system failure, human error, fraud, or external events. When controls fail to perform, operational risk can cause damage to reputation, have legal or regulatory implications, or can lead to financial loss. The Company have a rigorous control framework and monitoring process in place to manage operational risk. Controls include effective segregation of duties, access controls, authorisation and reconciliation procedures, staff education, and assessment

Standard Trane Insurance Ireland DAC

processes. Outsourced activities are monitored and managed in the same manner in line with the Outsourcing policy.

The Company cannot expect to eliminate all operational risk, but by initiating a rigorous control framework and by monitoring and responding to potential risks, the Company is able to manage the risk.

In addition, Standard Trane is subject to Internal and External Audit review.

STIIDAC maintains a regulatory dialogue with the CBI to mitigate the risk of any potential sanction or compliance breach as well as using expert, industry leading, service providers to provide its outsourced functions which helps avoid any material error or delay. In order to ensure the quality of the outsourced functions is as high as possible, STIIDAC puts in place service level agreements outlining key performance indicators against which its outsourced service providers can be monitored and assessed.

C.6 Other material Risks

Strategic Risk

Strategic risk is the risk of loss arising from adverse business decisions, improper implementation of decisions, or lack of responsiveness to industry changes i.e. the risk associated with implementing the wrong strategy or failing to correctly implement the chosen strategy.

The control and monitoring actions/principles underlying the strategic risk management of the Company are:

- Review at least annually of the appropriateness of the high level overall objectives for the Company; the major risks facing the Company; the Risk Appetite for each of these major risks identified. The Board of Directors will ensure continuing appropriateness, at least annually and revisions shall be affected where necessary.
- Ensure the Company strategy is implemented correctly including approval, review and, monitoring of agreed Key Performance Indicators for the Company.
- Ensure all plans are regularly reviewed to ensure that Risk Tolerances are not exceeded individually or in total.

Sensitivity Risk

The Company does not have any sensitivity risk as it does not have any unpaid claim liabilities.

No other material risks have been identified

C.7 Any other information

There are no other material items to report in this section.

D. VALUATION FOR SOLVENCY PURPOSES

D.1 Assets

Standard Trane prepares its financial statements on a going concern basis in compliance with FRS 102 issued by the Financial Reporting Council, and in accordance with the provisions of the Companies Act, 2014 and the European Union (Insurance Undertakings: Financial Statements) (Amendment) Regulations, 2016.

There is one difference between the financial statement basis and the Solvency II valuation rules. This difference is driven by the requirement for all assets and liabilities to be valued on a market consistent fair value basis under Solvency II.

At the end of the current reporting period STIIDAC has total assets valued at USD 3,290k for solvency purposes. This total comprises the following categories of assets:

- Deposits other than cash equivalents USD 3,187k

This amount represents short term deposits with an original maturity of three months or less and is stated at market value for both solvency and financial statement purposes, the only difference being the inclusion of accrued interest in the above balance. Accrued interest is disclosed as a separate line item in the financial statements.

- Cash and cash equivalents USD 78k

Cash and cash equivalents comprise cash at banks. Carrying amounts approximate fair value due to the liquid nature of the assets. There are no valuation adjustments for solvency purposes.

- Receivables (trade, not reinsurance) USD 25k

Receivables (trade, not reinsurance) relates to a refund of corporation tax over-paid.

Information on how the Company invests its assets and manages risk in this area, including how it achieves compliance with the 'prudent person principle', is set out in Sections C2 – C4 above. Operational risks relating to the Company's assets are managed according to the control framework described in Section B4 above.

D.2 Technical Provisions

Standard Trane has not renewed any insurance policies since 30 November 2007; therefore, it does not hold Technical Provisions and has received an exemption from the Central Bank of Ireland to not calculate these.

D.3 Other liabilities

Payables (trade, not insurance) of USD 66k comprise purely of accrued expenses and are classified as payables for solvency purposes. There is an immaterial difference between the figures in the financial statements and the solvency II figures due to the application of discounting to the accruals balance.

D.4 Alternative methods for valuation

No alternative methods were used.

D.5 Any other information

There is no other information to report.

E. CAPITAL MANAGEMENT

E.1 Own funds

The Company has put in place a Capital Management policy to ensure that 'Own Fund' items, both at issue and subsequently, meet the requirements of the Solvency II capital regime. The objectives of the policy are to ensure that on an on-going basis the Company has:

- own fund items available to meet its capital requirements; and
- developed processes to ensure the appropriateness of its own fund items.

As part of the annual review of the medium-term capital plan, the Company reviews the level, composition and classification of own fund items to ensure they continue to meet its own solvency needs, and its regulatory obligations in respect of Solvency Capital Requirement (SCR) and Minimum Capital Requirement (MCR). A 3 year forward looking time horizon is used for business planning purposes and any anticipated changes to the Company's business and risk profile are factored into the ORSA process to assess the solvency and capital needs over this business planning period. It is intended that the Company's capital needs will be managed out of its existing pool of own funds and the efficient management of the Company's insurance business. Should additional funds be required outside of that, they will be advanced by the shareholder.

The Company's own funds consist of the following items:

- Issued Share Capital,
- Retained Earnings.

Any change to the share capital requires the approval of the Shareholder and the Board. Retained earnings are adjusted on a quarterly basis to take account of the profits/losses earned in the period together with any Solvency II valuation adjustments.

The payment of dividends is considered on an annual basis by the Board as part of its medium-term capital assessment. Potential dividends will be considered as part of the Company's ORSA process to ensure that the Company will continue to meet its solvency needs over the business planning period.

Any other qualifying own fund item requires the review and approval of the Board. In such instances, the Board must ensure that the terms and conditions of any own fund item are clear and unambiguous in relation to the capital classification.

Own fund items at the end of reporting period and the prior year (unaudited) comparative period are as follows:

	2020	2019
	USD'000	USD'000
Ordinary paid up share capital	1,400	1,400

Standard Trane Insurance Ireland DAC		
Reconciliation reserve	1,824	1,692
Total Tier 1 capital	3,224	3,092
Total basic own funds	3,224	3,092

The movement in basic own funds during the reporting period reflects the charging of administration expenses during the year and the receipt of USD 300k in capital from the Shareholder converted to retained earnings.

At the end of the current reporting period eligible own funds available to meet the Company's SCR are USD 3,224k comprised solely of Tier 1 capital. Eligible own funds available to meet the Company's MCR are USD 3,224k, comprised solely of Tier 1 capital.

The equity position as shown in the Company's 2020 period-end financial statements has no difference against the basic own funds balance under Solvency II.

Standard Trane has no ancillary own funds and there are no transitional arrangements impacting its capital calculations.

E.2 Solvency capital requirement and minimum capital requirement

At the end of the current reporting period, Standard Trane's SCR and MCR have been calculated as USD 652k and USD 3,071k.

The SCR is intended to correspond to the capital the Company needs to hold in order to limit the probability of ruin, in the following 12 months, to 0.5%, i.e. ruin would occur less than once in every 200 years. The SCR calculated at the end of the current reporting period, relates to the capital required to support the business over the prospective 12 months; covering both existing liabilities and new liabilities arising expected to be written over the next 12 months. Based on the Company's eligible own funds of USD 3,224k, the Company has a solvency ratio at 31 December 2020 of 105%.

The SCR has been calculated using the standard formula and without the application of any undertaking specific parameters.

The split of SCR by risk modules is shown below, together with the prior year audited comparative:

Risk Charge	2020 USD'000	2019 USD'000	Change USD'000
Non-Life Underwriting Risk	-	-	-
Counterparty Default Risk	5	6	-1
Interest Rate Risk	16	17	-1
Spread Risk	45	43	2
Currency FX Risk	2	7	-5
Concentration Risk	649	468	181

Standard Trane Insurance Ireland DAC

<i>Diversification Benefit</i>	-61	-65	4
Market Risk	651	470	181
<i>Diversification Benefit</i>	-4	-4	0
BSCR	652	472	180
Operational Risk	-	-	-
Tax Adjustments	-	-	-
SCR	652	472	180
MCR	3071	2809	262
Available Capital	3224	3092	132
Surplus/Deficit	153	283	-130
Solvency Ratio	105%	110%	-5%

The key driver of the SCR is the Concentration Risk Charge. The Concentration Risk charge is driven by the assets held with BNP Paribas..

The MCR is calculated through a prescribed formula based on the net technical provisions (excluding the risk margin) and net written premium. It is also constrained to be between 25% and 45% of the SCR. Further to this, the Solvency II Directive states the MCR must have a minimum value of €1.2m, €2.5m, €3.6m or €3.7m depending on the type of risk being accepted by the entity. The minimum MCR for non-life insurance undertakings is €3.7m but is reduced to €2.5m if certain risk classes are not covered. In the case of Standard Trane, as a non-life captive insurer which has not written any business, this absolute floor is EUR 2.5m. Having carried out the calculations and applied the relevant limits, the resultant MCR for the Company is USD 3,071k (equivalent of the absolute floor translated at the period-end exchange rate). The movement in MCR from the prior year reflects the change in EUR/USD exchange rates over the period.

E.3 Use of duration-based equity risk sub module in calculation of the solvency capital requirement

There was no use of duration-based equity risk sub module in the calculation of the SCR.

E.4 Differences between the standard formula and any internal model used

STIIDAC used the standard formula in determining its SCR and MCR and did not rely on any internal model.

E.5 Non-Compliance with the Minimum Capital Requirement and noncompliance with the Solvency Capital Requirement

There are no instances of non-compliance with the MCR and SCR.

E.6 Any other material information

There is no other information to report.

E.7 Additional voluntary information

There is no additional voluntary information to report except to note that in accordance with Article 297 par2a we note that the SCR & MCR are still subject to supervisory assessment.

<i>Note: Tables within this report contain minor rounding differences in certain instances due to amounts being displayed as whole numbers or in thousands while the source workings underlying the annual reporting templates are calculated to two decimal places. These differences are immaterial.</i>
