INTRODUCTION

Acadia International Insurance DAC (“Acadia” or “the Company”) has prepared the below Solvency and Financial Condition Report (“SFCR”) on a solo basis in accordance with the regulations set out in Articles 292 –297 of the Solvency II Delegated Acts together with the Guidelines on reporting and public disclosure issued by EIOPA.

SUMMARY

This Report refers to the business of Acadia, a captive insurer, authorised and supervised by the Central Bank of Ireland. It provides the reader with information on the Company’s business and performance, system of governance, risk profile, valuation for solvency purposes and capital management for the reporting period ended 30 June 2022.

The Board of Directors has identified the key risks to which Acadia is exposed and established appropriate corporate governance, risk management and reporting mechanisms to ensure that the identified risks remain relevant, and that they are managed and reported on with appropriate levels of detail and frequency. The Company has established a comprehensive suite of risk policies and implemented a series of internal controls to ensure that Acadia can be managed in accordance with its governance and risk management systems. Documented escalation mechanisms are in place to ensure that any breaches in risk limits and tolerances, internal controls and governance requirements can be reported promptly to the appropriate individuals.

Risks to which the Company is exposed are well understood and are used to determine the level of solvency and capital required over a forward-looking three-year business planning period. The results of this exercise are used to better inform decision making within the Company.

As at 30 June 2022, the Company had eligible own funds of US\$27.85m (2021: US\$25.91m) available to meet its Solvency Capital Requirement (“SCR”) of US\$15.87m (2021: US\$16.93m); resulting in a Solvency Ratio of 175% (2021: 153%) which is considerably higher than the Company’s risk appetite of 120%. The Board of Directors is satisfied that the Company has adequate and appropriate capital to support its business plans. The Minimum Capital Requirement (“MCR”) of US\$3.97m (2021: US\$4.40m) was also satisfactorily met at the period-end. There were no instances of non-compliance with the capital requirements during the period. The Company’s profit after tax for the period was US\$2.02m (2021: US\$1.24m).

During the period, there were no material changes to the Company’s business/performance, system of governance, risk profile, valuation for solvency purposes or capital management.

Some figures in the tables in this report are rounded to the nearest USD 1,000. Consequently, some totals may not be the sum of the individual items due to rounding.

A. BUSINESS & PERFORMANCE

A.1 Business

Acadia is a Captive Insurance Company regulated by The Central Bank of Ireland (“CBI”). The insurance supervision division at the CBI may be contacted at their offices in New Wapping Street, North Wall Quay, Dublin 1, Ireland. The Company is engaged exclusively in the underwriting on a direct insurance and reinsurance basis of property, liability and aviation liability risks, providing coverage to Parker Hannifin entities worldwide, particularly in the United States of America, Germany and France. The Company is a wholly-owned subsidiary of Parker Hannifin Corporation, 6035 Parkland Blvd, Cleveland, Ohio 44124-4141, which is incorporated in the United States of America.

As a captive insurer, the main trends and factors that contribute to Acadia’s performance and financial position over the business planning period are aligned to the overall risk appetite and risk management practices of the Parker Hannifin group (“the Group”). Acadia is a strategic element within Parker Hannifin’s global insurance arrangements. Decisions on the nature and quantum of risks to be underwritten are made by the Company’s Board of Directors based on Acadia’s own risk appetite and an economic evaluation of those risks from the perspective of profitability, capital and solvency requirements. Claims volatility is managed by the Company through the purchase of appropriate levels of reinsurance taking account of both claims severity and frequency.

Post-year end, Parker Hannifin acquired Meggitt PLC on 13 September 2022. It is anticipated that Meggitt PLC risks will be incorporated within Acadia’s existing insurance programmes in 2023.

There were no significant legal or regulatory issues impacting the Company during the period.

External Audit services are provided to Acadia by Mazars Chartered Accountants & Statutory Audit Firm located at Mazars, Harcourt Centre, Block 3 Harcourt Road, Dublin 2, Ireland, and the signing partner is Mr. Rob Hamill.

In respect of relevant quantitative information for this report please see the Annual QRT extract in Appendix 1.

A.2 Underwriting Performance

The principal risks and uncertainties that the Company faces are, by the very nature of the business, those for which it provides or has provided insurance cover. The Company seeks to ensure that it collects sufficient premium income to meet the cost of potential claims over time, but the uncertainty surrounding the severity and frequency of claims can lead to significant variation in the Company's performance in the short term. Whilst considerable judgment is involved, the Board of Directors adopt an appropriately prudent approach to the provision and valuation of adequate insurance reserves, with annual support and certification being provided by an external actuary.

The Group strategy is to maintain a level of risk within Acadia that provides Parker Hannifin with an optimal insurance structure. It is therefore accepted that, in accordance with its business plan, the best strategic operating options available are for Acadia to write a number of lines of insurance business, insuring Parker Hannifin:

- Property Damage/Business Interruption ("PDBI")
- General Liability
- Aviation Products Liability
- Directors' and Officers' Liability

All policies are subject to original policy deductibles, sub-limits and individual aggregates. There are also reinsurance layers for the General Liability programme, with the excess layers of the programme 100% reinsured, and the Property Damage/Business Interruption programme, of which Acadia retains a portion. Reinsurance for 100% of the programme is also purchased for the Aviation Products Liability line of business.

Claims are paid by Acadia up to agreed single loss limits and aggregates, in excess of deductibles.

Premiums written relate to business incepted during the financial year.

Provision is made for notified losses on all underwriting years. Provisions are calculated gross of any reinsurance recoveries with a separate estimate being made of amounts recoverable from reinsurers.

The Company's underwriting performance for the underwritten lines of business for the reporting period ended 30 June 2022 and the comparative period is set out below. Amounts are presented in US Dollars (USD), which is the Company's functional currency:

In US\$'000	30 Jun 2022	30 Jun 2021
Gross premiums earned	22,798	21,381
Outward reinsurance premiums earned	(19,585)	(18,708)
Net premiums earned	3,213	2,673
Allocated investment return transferred to the technical account	2	6
Gross claims paid	(1,721)	(4,838)
Claims Recovered/Recoverable from reinsurers	-	2,321
Net claims paid	(1,721)	(2,517)

Change in gross provision for claims	644	2,160
Provision for claims – recoverable from reinsurers	1,063	(330)
Change in net provision for claims	<u>1,707</u>	<u>1,830</u>
Net operating expenses	(736)	(688)
Underwriting profit	<u>2,465</u>	<u>1,304</u>

Gross premiums earned comprise related party liability, marine, property damage and business interruption, and aviation products liability risks located worldwide. All premiums resulted from contracts of insurance concluded in the Republic of Ireland. Gross premiums written for the period ended 30 June 2022 amounted to US\$25.85m (2020: US\$21.42m).

Gross premiums written split by line of business:

In US\$'000	30 Jun 2022	30 Jun 2021
Gross premiums written		
Fire and Other damage to Property	11,260	9,876
Marine, Aviation and Transport	-	-
General Liability	14,585	11,544
Total	<u>25,845</u>	<u>21,420</u>

Premium pricing is re-assessed annually based upon market pricing. This takes account of the underlying risks to be insured, historical claims performance, the pricing of reinsurance in the market and the relevant costs associated with the administration of the programme. Total gross premiums written in the 2021/22 underwriting year increased by US\$4.43m:

- General Liability increased by US\$3.04m due to an increase in gross limit written, increasing from US\$210m in 2021, to US\$250m in 2022.
- Fire and Other damage to Property premium increased by US\$1.38m due to insurance market factors

Gross claims paid during the financial year ended 30 June 2022 totalled US\$1.72m (2021: US\$4.84m), almost entirely attributable to the North Haven, USA property damage/business interruption claim, with net claims paid/payable of US\$1.72m (2021: US\$2.52m). As at 30 June 2022, the Company held gross claims provisions of US\$16.30m (2021: US\$16.95m), and net claims provision of (US\$2.00m) (2021: (US\$0.3m)).

Below table presents the gross claims and the provision for claims split by line of business:

Gross claims incurred	30 Jun 2022	30 Jun 2021
Fire & Other Damage to Property	(301)	(2,618)
General Liability	(776)	(60)
Marine, Aviation and Transport	-	-
Total	<u>(1,077)</u>	<u>(2,678)</u>

Net operating expenses for the year amounted to US\$0.74m (2021: US\$0.69m).

Provision is made for notified losses on all underwriting years and calculated gross of any reinsurance recoveries with a separate estimate being made of amounts recoverable from reinsurers.

Profit after tax for the period ended 30 June 2022 amounted to US\$2.02m (2021: US\$1.24m).

A.3 Investment Performance

The Company allocates its investment portfolio in three distinct portfolios, as detailed below;

BlackRock Liquidity Fund: The Company invests in BlackRock's Institutional US Dollar Ultra Short Bond Fund. The custodian of the Fund is J.P. Morgan Administrative Services (Ireland) Limited. The Fund aims to generate income and a reasonable degree of liquidity consistent with low volatility of capital, through the maintenance of a portfolio of high quality short to medium term fixed income securities including money market instruments and securities which pay income according to a floating rate of interest and asset backed securities ("ABS"). The Fund's assets will be rated high quality at the time of purchase and it will only invest in securities which have a residual maturity of 2 years or less at time of purchase.

Cash Pooling Accounts: Since 2017 Acadia has participated in a cash pooling arrangement with Parker Hannifin rather than investing in separate fixed deposits. The Company now receives monthly interest based on daily calculated balances on the funds it holds in its USD and Euro accounts.

Intercompany Loan: Available funds are invested, as deemed prudent by the Board of Directors, in an intercompany loan with Parker Hannifin EMEA Sàrl, a wholly owned subsidiary of Parker Hannifin Corporation. Since 2020 the intercompany loan is under a parental guarantee by Parker Hannifin.

The investment gain for the year to 30 June 2022 amounted to US\$43k (which includes interest income and unrealised gains on investments), compared to US\$83k in 2021.

The Company has no investments in securitised asset classes and all investment income is recognised in the Company's income statement.

A.4 Performance of other activities

Acadia does not engage in any activities other than those associated with captive insurance and has not entered into any leasing agreements.

A.5 Any other Information

The Board of Directors had considered possible material or adverse effects the current military conflict in Ukraine could have on the business. The Board of directors have not identified any additional exposures for the Company arising from the military conflict in the Ukraine, however, will continue to monitor the situation as it develops.

B. SYSTEM OF GOVERNANCE

B.1 General information on the system of governance

In aiming to meet the requirements for sound corporate governance, ensuring efficient conduct of business and to protect the interests of the Company's stakeholders, the Company has a comprehensive Governance and Risk Management system in place.

It is the responsibility of the Board of Directors to ensure that risks are fully understood and appropriately managed in accordance with this framework. Risk management, reporting and auditing processes will reflect the requirements set out in the Governance Manual.

The Governance and Risk Management System of the Company may be described as relying on four cornerstones:

- 1) Governance Framework, aligned with the Company's strategic objectives, providing top level oversight by the Board of Directors, clear ownership and accountability for risks, as well as clear escalating and reporting channels.
- 2) Risk Management System which details the Company's strategic objectives in documented Risk Policies. For each risk, limits and operational checkpoints as well as functional identification mitigation and monitoring processes are documented.
- 3) A series of Internal Controls, defining the architecture of processes required to manage the Company in accordance with its Governance and risk management framework.
- 4) A Risk Register combining operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's global strategy objectives.

There have been no material changes to this structure in the period. Acadia implemented the above framework in advance of the inception of Solvency II ("SII") to ensure compliance.

In order to achieve the Company's objectives, the Board of Directors has established a system of governance with the following core components:

- the Board of Directors is the focal point of the governance system and is ultimately accountable and responsible for the performance and conduct of the Company and, as such, must have at its disposal all required capabilities to achieve its duties;
- all authority emanates from the Board of Directors and responsibilities are delegated in such a manner so as to ensure that no one individual has unfettered powers of decision;
- an appropriate segregation of duties in order to enable the Risk Management, Internal Audit, Actuarial and Compliance Function to perform independent risk and business control mitigation, monitoring and reporting tasks;
- a meaningful and practical approach in documenting policies and strategies to formalise all processes in an efficient and fit-for-purpose manner; and
- structured reporting processes to enable an appropriate escalation of risks and issues to the Board of Directors in order to ensure a clear and comprehensive information process allowing the Board of Directors to conduct business in an efficient and prudent manner in line with the strategic objectives.

Given the limited scale and complexity of the Company, and having reviewed the risks facing the company thoroughly, the Board of Directors are satisfied that the system of governance in place is adequate.

The Board of Directors undertakes responsibility for performing the equivalent function of an Audit Committee in relation to the reporting period ended 30 June 2022.

Key Functions

The key functions of Risk Management, Internal Audit, Actuarial, Compliance and Operations have clear and defined lines of reporting directly to the Board of Directors. This is facilitated by the straightforward nature of the Company's structure and fit-for-purpose documented policies and procedures which are clearly communicated and well understood by all relevant parties. The Board of Directors has ensured that the key functions are appropriately resourced and have the necessary authority and operational independence to perform their roles. The Company has engaged Aon Insurance Managers (Dublin) Limited ("AIMD") for the provision of management services, under the terms of an outsourced service and management agreement which is overseen by the Board of Directors.

Remuneration and material transactions

Other than transactions which arise in the normal course of business, the Company had no other material transactions during the reporting period with members of the shareholder group and none with members of the Board of Directors.

Given the scale and complexity of the Company, and having reviewed the risks facing the Company thoroughly, the Board of Directors are satisfied that the system of governance in place is adequate.

The various functions assisting the Board of Directors, including the Compliance Function, have defined lines of reporting directly to the Board of Directors. In relation to any violation of relevant law by the Company the Compliance Function as well as reporting to the Board of Directors, will, in certain circumstances, also be required to report to outside bodies such as the CBI.

B.2 Fit & Proper

The 'Fit and Proper' requirement is the standard required by the CBI when appointing pre-approved controlled function holders. Acadia is satisfied that appointed individuals performing controlled functions meet all relevant regulatory requirements.

In selecting individuals as directors or function holders, the Company takes account of the following factors:

- specific requirements of the role
- the skills, experience and relevant qualifications of the proposed individual
- results of due diligence enquiries
- conflicts of interest
- time requirements and other commitments
- competence and integrity
- financial soundness

Acadia is satisfied that appointed individuals performing controlled functions meet all relevant regulatory requirements and have a suitable level of training and qualification in order to enable the Directors to carry out their respective duties.

The Compliance function adopts appropriate controls in the registration of its individuals across the Group ensuring that identified individuals meet the regulators' fit and proper criteria at the point of registration.

Roles and Responsibilities Detail		
Key Roles	Outsourcing	Responsible
Board of Directors	No	Jennifer Chester (Chairman) Jim Meehan (appointed 30 th September 2021) Oleg Williamson (resigned 29 th April 2022) Jane de Barra Murphy
Risk Management Function	Yes (External) No	AIMD Simon Huttley (Head of Risk Management Function)
Compliance Function	Yes (External)	AIMD
Operations - Underwriting/Claims Management	Yes (External)	AIMD in conjunction with Parker Hannifin
Operations - Finance and Accounting	Yes (External)	AIMD
Operations – Investment	Yes (External)	AIMD
Operations – Administration	Yes (External)	AIMD
Internal Audit Function	Yes (External) No	Aon Commercial Services Ireland Limited Oleg Williamson (Head of Internal Audit Function) (resigned 29 th April 2022)
Actuarial Function	Yes (External)	Aon UK Actuarial & Analytics – Kim Burgess (Head of Actuarial Function)

B.3 Risk Management System including the own risk and solvency assessment

The Company's Risk Management System:

- sets out the level of risk acceptable by the Company (Risk Appetite and risk tolerance);
- identifies the risks which represent a threat to the achievement of its strategic objectives;
- identifies, defines and regularly measures key risk indicators enabling an efficient monitoring of risks;
- defines the appropriate actions to reduce the Company's risk exposure;
- ensures the risk management framework is implemented in day-to-day business processes; and
- regularly reviews controls and mitigation actions to ensure that they remain relevant and effective.

The overriding goal of the Company's risk management strategy is to control and to achieve, as much as possible, a reduction in the Company's risk exposure as a means of minimising the impact of unexpected events, in order to increase the likelihood of achieving the Company's strategic and business objectives.

In order to achieve these objectives, the Risk Management System of the Company has been clearly

documented and specified through risk management policies for each key risk category. The key risk categories for which the Company has set up specific control and monitoring mechanisms are:

- Underwriting/Reserving
- Asset Liability Management ("ALM")
- Investment
- Liquidity and concentration
- Operational
- Reinsurance and other risk mitigation techniques
- Strategic

In order to achieve these objectives, the Risk Management System of the Company has been clearly documented and specified through risk management policies to each key risk category.

In addition to these policies, an outsourcing policy defining the key rules and criteria to be respected by a service provider has been determined.

Own Risk and Solvency Assessment

The Company performs an Own Risk and Solvency Assessment ("ORSA") process annually in order to provide its Board of Directors with a forward-looking risk and capital assessment. The adequacy of the available capital, the Risk Appetite Framework and the appropriateness of the risk limits is assessed for the business planning period, considering the evolving risk profile. To this end, risks and scenarios to which the Company is exposed during the business planning period and which may affect the capacity to meet its insurance obligations or pose a threat to the achievement of its business objectives are taken into account.

Define the Stress Scenarios

Stress testing and scenario analysis are used to assess whether the available and future capital are sufficient in expected and stressed situations.

As part of ORSA process, the Company selects the appropriate stress and scenario tests as determined by the Board of Directors to be appropriate for the Company.

Stress the Financial Plan

Stress test scenarios are embedded into the projected financial plan under Solvency II GAAP. Related SCR (the amount of funds that Acadia is required to hold under the European Union's Solvency II directive in order to have a 99.5% confidence they could survive the most extreme expected losses over the course of a year) / (similar to SCR, but with a confidence level of 85%) and solvency ratios are then calculated for each year, resulting in the Stressed Financial Plan and the solvency impact of validated scenarios. The tasks of this process are conducted by the Actuarial Function and validated by the Risk Management Function.

Assess prospective solvency needs on the basis of the Stressed Financial Plan

The Risk Management Function identifies potential additional mitigation actions to reduce the potential impact of the Stress Scenarios. The main purpose of this stage is to identify and assess any

relevant complementary control, mitigation actions or review of the Risk Appetite in order to match prospective solvency needs with capital position. Any remaining solvency gap will be covered through a relevant capital plan, i.e. defining the measures to restore the Company's solvency margin should the assumed scenarios occur.

Produce the ORSA Report

The ORSA report will bring clarity over projected risk assessments and solvency needs to three different stakeholders.

Stakeholder	Expectation	ORSA Report
Board of Directors	Matching projected risks vs the Risk Appetite framework.	Will provide a clear and prospective understanding of critical risk exposures and their relationship with Risk Appetite boundaries.
Shareholders	Detailed and prospective understanding about the risk of bankruptcy and potential need for future additional capital.	Will provide a plan for capital needs on the time horizon of the financial planning.
Supervisory Authority	Detailed and prospective understanding of potential ORSA deviations compared to the SCR under Pillar I.	Will gather information about: projected Solvency ratios; - explanations about deviations due to specific critical risks exposures.

The ORSA process described above ensures that ORSA is integrated in the decision-making and business planning process. Furthermore, monitoring procedures as set out in the risk management policies ensures that risk exposures are measured on a regular basis triggering exception reports for the Board of Directors.

In line with CBI requirements the Head of Actuarial Function provides an Actuarial Opinion to the Board of Directors in respect of the ORSA at the same time the results of the ORSA process are presented to the Board of Directors.

The capital risk appetite for Acadia is to sustain its capital at a level sufficient to meet the Solvency Capital Requirement at all times with a buffer of 20%. The Board of Directors maintains a prudent approach to capital to ensure that Acadia is in a comfortable position to meet its SCR obligation.

Should Acadia find itself in the position where capital would need to be replenished, Parker Hannifin Corporation would provide additional capital to ensure that SCR compliance can be demonstrated. Parker Hannifin Corporation is expected to continue to have ample capacity to provide this support to Acadia.

B.4 Internal Control System

The Internal Control System embedded in the Company's operations is a mix of processes and procedures undertaken by all stakeholders within the Company to provide reasonable assurance that the strategic objectives will be achieved.

In order to achieve the aforementioned objectives, the Internal Control framework of the Company is structured around five complementary components;

Component	Contents
1) Control environment	A strong "risk and control" culture is embedded within the Company's operations through the continuous oversight of the Board of Directors and the communication to all internal stakeholders of all governance and risk principles through the present manual.
2) Risk assessment	Procedures and policies are detailed and formalized in order to disclose the way of identifying, managing, controlling, mitigating and reporting issues relating to each risk category.
3) Reporting channels	Clear and structured reporting processes are in place enabling the Board of Directors to have access to relevant, complete, reliable, correct and timely communication related to internal as well as external events.
4) Monitoring process	The appropriate escalation of significant issues to the Board of Directors, the ongoing involvement of all internal stakeholders as well as the Internal Audit process enables the Company to continuously monitor and adapt when necessary its Internal Control System.
5) Control activities	The Company developed a comprehensive set of preventative, detective or corrective control actions embedded in its daily operations, as formalized hereafter.

Detailed Processes and Embedded Control Activities

In order to set out how the Internal Control System is implemented, the Company's processes and related control activities are documented, monitored and reviewed on a regular basis.

These items are designed by the Risk Management Function, approved by the Board of Directors and evaluated by the Internal Audit Function. They are reviewed as often as necessary, but at a minimum once a year.

As described, each of the macro-process is detailed in key processes and workflow processes aimed at describing how the tasks and actions composing the given process are shared between the key functions of the Company and at clarifying related roles, responsibilities and embedded control activities.

There is no other material information regarding the system of governance of the Company to be noted.

Compliance Function

The Company has a dedicated Head of Compliance reporting directly into the Board of Directors.

- The Compliance Function is an integral component part of the internal control system of the Company and is responsible for compliance with the internal control system. The elements of the internal control system are laid out in the Corporate Governance Framework document.

- The Compliance Function will identify and communicate throughout the Company the laws, regulations and codes of conduct to which the Company is subject. The Compliance Function will seek to embed compliance with these laws, regulations and codes of conduct in the way the Company does business.
- The Compliance Function will maintain a comprehensive compliance risk management control and reporting system in conjunction with the Risk Management Function to assist in managing the Compliance Risk faced by the Company.
- Any violation of relevant law by the Company will be investigated and followed up by the Compliance Function and reported to the Board of Directors, and in certain circumstances to outside bodies such as the CBI.
- The Compliance Function will consider possible future changes in the legal environment and their potential effect on the Company.
- The Compliance Function will present an annual Compliance Plan, outlining specific areas which it will focus on during a particular year.
- Finally, the Compliance Function will promote a culture of compliance throughout the Company.

B.5 Internal Audit Function

Purpose & Objectives

The purpose of the Internal Audit Function is to serve as an independent Function that objectively evaluates and recommends improvements to the Company's Internal Control System by facilitating an objective and independent assessment.

It assists the Company to accomplish its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control and governance processes employed by the Company.

The Board of Directors is keen to develop effective policies and practices and take appropriate corrective action in response to weaknesses identified by internal and external auditors.

Independence and Impartiality

The Company's Internal Audit Function must be independent of the activities audited and must also be independent from the operational Functions and the Board of Directors.

The Internal Audit Function is free to report its findings and appraisals and to disclose them to the Board of Directors as required. This principle of independence of the Internal Audit Function entails that the Internal Audit Function operates under the direct control of the Board of Directors.

B.6 Actuarial Function

The Actuarial Function is carried out by Aon UK Actuarial & Analytics who provides a nominated individual to act as Head of Actuarial Function.

Role and Responsibilities of the Actuarial Function include:

- Coordination of the calculation of technical provisions;

- Identify any inconsistency with the requirements set out in Articles 76 to 85 of the Solvency II Directive for the calculation of technical provisions and propose corrections as appropriate;
- Explain any material effect of change of data, methodologies or assumptions between valuation dates on the amount of technical provisions if already calculated on a Solvency II basis;
- Assess the consistency of the internal and external data used in the calculation of technical provisions against the data quality standards as set out in Article 82 of the Solvency II Directive. Where relevant, the Actuarial Function should provide recommendations on internal procedures to improve data quality so as to ensure that the undertaking is in compliance with the relevant Solvency II requirements;
- The Actuarial Function, when providing its opinion on the Underwriting Policy and the reinsurance arrangements, to take into consideration the interrelations between these and the technical provisions;
- Report in writing at least annually to the Board of Directors of the undertaking. This report should document all material tasks that have been undertaken by the Actuarial Function, their results, clearly identifying any deficiencies and giving recommendations as to how such deficiencies could be remedied, in particular:
 - i. Technical Provisions Coordination of calculation
 - ii. Methodologies & assumptions
 - iii. Data sufficiency & quality
 - iv. Experience analysis
 - v. Report to the Board of Directors on reliability & adequacy
 - vi. Opinion on Underwriting policy
 - vii. Opinion on Reinsurance arrangements.
- Contribute to the effective implementation of the Risk Management System, in particular:
 - i. With regard to risk modelling underlying the calculation of the SCR (defined previously) and MCR;
 - ii. Contributing to the ORSA process.
- Think critically and organize the execution of actuarial approaches; and
- Provide an actuarial opinion to the Board of Directors in respect of the ORSA

The person in charge of the Actuarial Function shall meet all the following criteria:

- Be a duly qualified actuary;
- Have experience of more than five years in the field of insurance and / or reinsurance.

The Head of Actuarial Function is a pre-approval controlled function (“PCF”) under the Central Bank Reform Act 2010 (Sections 20 and 22) Regulations 2011.

The Head of Actuarial Function reports to the Board of Directors and issues a report in writing at least annually documenting all of the material tasks that have been undertaken by the Actuarial Function during the reporting period.

In establishing the Company’s Actuarial Function, the Board of Directors has ensured that the persons involved have the requisite qualifications and demonstrable experience in the area of non-life

reserving and are fully conversant with the Solvency II requirements for the calculation of Technical Provisions.

B.7 Outsourcing

All functions and activities of the Company are eligible to be outsourced provided that specific criteria are satisfied in each instance.

The Board of Directors is responsible for the approval and termination of all outsourcing arrangements of critical or important functions or activities. Critical or important functions or activities include key functions relating to the Company's System of Governance and all functions within the Company that are fundamental to carry out its core business. The Board of Directors is responsible for ensuring notification to the CBI is made in a timely manner prior to the outsourcing of critical or important functions or activities, and thereafter where there have been material developments in relation to the service provider.

The objectives of Acadia's Outsourcing Policy are to ensure that the outsourcing of critical or important operational Functions or activities does not lead to:

- Reduction in the Board of Directors' and, where applicable, a relevant sub-committee's responsibility for, or influence over, key Functions of the Company;
- Material impairment of the quality of the Company's System of Governance;
- Any impairment of the Company's ability to meet its regulatory requirements;
- Non-adherence to the Company's approved policies and procedures;
- Undue increases in operational risk or cost;
- Material impairment of the Company's ability to fulfil its obligations to stakeholders, nor impede effective supervision by regulators;
- Conflicts of Interest;
- Breach of the Company's data protection obligations.

All Functions and activities of the Company are eligible to be outsourced provided that each of the criteria detailed above are satisfied in each instance. Sub-outsourcing is also allowable only in exceptional circumstances, on the condition that the sub-outsourced service provider satisfies the above criteria and subject to approval from the Board of Directors.

The Board of Directors is responsible for the approval of and termination of all outsourcing arrangements of critical or important Functions or activities. Critical or important Functions or activities include key Functions of the Company's System of Governance and all Functions within the Company that are fundamental to carry out its core business.

The Board of Directors must decide whether arrangements with third parties are deemed to fall within the scope of this outsourcing policy. The provision of services which do not form part of the Company's core activities need not be included within the scope of this policy.

The Board of Directors is responsible for ensuring notification to the supervisory authorities is made in a timely manner prior to the outsourcing of critical or important Functions or activities, and thereafter where there have been material developments in relation to the service provider.

The Board of Directors is responsible for reviewing the performance of outsourced service providers against the agreed Service Level Agreements (“SLA”).

The Board of Directors is responsible for assessing the risks associated with the outsourcing of critical or important Functions or activities.

Critical or important function	Outsourced Service Provider	Jurisdiction
Underwriting administration	AIMD	Ireland
Claims administration	AIMD	Ireland
Finance and accounting	AIMD	Ireland
Compliance Function	AIMD	Ireland
Risk Management Function	AIMD, reporting to Simon Huttley as Head of Function.	Ireland
Actuarial Function	Aon UK Actuarial & Analytics	United Kingdom
Internal Audit Function	Aon Commercial Services Ireland Limited	Ireland

B.8 Any other Information

Acadia has no other information to report in relation to System of Governance.

In respect of relevant quantitative information for this report please see the Annual QRT extract in Appendix 1.

C. RISK PROFILE

The Risk Appetite Framework adopted by the Board of Directors sets out the level of risk that the Company is prepared to accept in the pursuit of its strategic objectives. It sets out:

- the Company's overall attitude to risk taking and the expectations of shareholders;
- the Company's tolerance to loss of capital, profit volatility and other specified measures; and
- the risk limits that are acceptable in terms of exposures to different types of risk.

The Company's Risk Register combines operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's strategic objectives.

The Board of Directors' annual ORSA process is based on the Company's current and expected risk profile over the business planning period and supports the Board of Directors in achieving its strategic objectives by taking a structured and combined approach of strategy, risk management and capital management.

C.1 Underwriting Risk

The Company underwrites contracts that transfer insurance risk. The risk under any insurance contract is the possibility that the insured event occurs and the uncertainty that the Company will have sufficient assets to satisfy the amounts payable under the contract. The Company seeks to ensure that it collects sufficient premium income to meet the cost of potential claims over time, but the uncertainty surrounding the severity and frequency of claims can lead to significant variation in the Company's performance in the short term. Whilst considerable judgment is involved, the Board of Directors ensure that suitable processes are in place to ensure the reliability, sufficiency and adequacy of both the statistical and accounting data to be considered in the loss reserve estimation and recording process and to detail the Company's approach to the calculation of technical provisions.

Given the Company is providing insurance for losses directly above local deductibles, the primary risk mitigation technique utilised is the purchase of loss reinsurance as this provides balance sheet protection, from claims severity, in an economically and administratively efficient manner. The effectiveness of these reinsurance arrangements is assessed on a quarterly basis through the preparation of the Company's financial accounts and reviewed at an overall level as part of the considerations for premium pricing on an annual basis. The primary focus of the Company's reinsurance strategy is on the security and financial stability of reinsurers selected. It is expected that these arrangements will continue over the business planning period.

Annual support and certification are provided by an Actuarial Function. There have been no material changes to underwriting risk during the reporting period.

The sensitivity analysis below is performed for conservative movements in the ultimate loss ratios ("ULRs") used in the estimation of the claims reserve with all other assumptions held constant, showing the impact on gross and net claims reserve and Profit Before Tax ("PBT") for the year.

In US\$`000	Adjusted gross claims reserve	Adjusted net claims reserve	Adjusted PBT for the year	Adjusted Equity
30 June 2022				
Increase in ULR's by 10%	17,932	(2,203)	2,107	1,843
Decrease in ULR's by 10%	14,672	(1,803)	2,507	2,194
30 June 2021				
Increase in ULR's by 10%	18,641	(326)	1,388	1,215
Decrease in ULR's by 10%	15,251	(266)	1,448	1,267

C.2 Market Risk

The Company's principal transactions are carried out in US Dollars and its exposure to foreign exchange risk arises primarily with respect to Euro with a small amount of GBP and other currencies. The main foreign exchange risk arises from the receipt of premium and Insurance Premium Tax ("IPT") in other currencies. The Board of Directors has discussed options to mitigate foreign exchange rate fluctuations at recent meetings and has, in the past, considered participation in the parent company hedging program. There has been no material change to market risk during the reporting period.

Acadia has an investment strategy in place in line with its Risk Appetite Framework and the related 'Prudent Person' regulatory requirements. The Company endeavours to:

- prudently invest with consideration of the prevailing financial market environment;
- ensure the Company invests appropriately so as not to result in the Company failing to meet its SCR;
- ensure that the Company holds assets of sufficient value and liquidity to meet all liabilities as they become due;
- maximise investment return within the levels of risk as defined by the Company's Risk Appetite;
- ensure compliance with the Liquidity Strategy and Policy;
- ensure compliance with the ALM Strategy and Policy; and
- ensure effective risk management of investments at all times, with due consideration of the risks associated with investments and procedures to monitor, manage and report these risks in a timely manner as part of the Company's overall Risk Management System.

The Company is exposed to currency risk to the extent its assets and liabilities are denominated in a currency different from its functional currency which is US Dollars. The Company seeks to mitigate currency risk by matching the assets and liabilities which arise in different currencies in so far as is possible.

C.3 Credit Risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss.

The Company has identified credit risks associated with the cash and deposits it has placed with third party financial institutions. All investments undertaken are in line with the Company's Investment Policy, which is regularly reviewed by the Board of Directors. The requirements of the Company's

Investment Policy were met at all times during the financial year.

The Company also recognises the credit risks associated with its reinsurance arrangements. The Company manages its reinsurance risks by establishing a reinsurance strategy and this strategy sets out the required security ratings of its reinsurers and the procedures to follow if a financial strength rating of a minimum of A- is not met.

C.4 Liquidity Risk

Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet cash commitments associated with financial obligations. The Company has determined that liquidity risk does not represent a significant exposure to its business. This assessment is based on the fact that the Company has all of its investments held in bank deposits, intercompany loan or within a liquidity fund managed by Blackrock Asset Management. The Blackrock liquidity fund invests primarily in commercial paper, floating rate notes, certificates of deposit, and fixed rate bonds and cash deposits. Investments in the fund follow the Company's investment guidelines.

C.5 Operational Risk

Operational risk is the risk of loss arising from system failure, human error, fraud, or external events. When controls fail to perform, operational risk can cause damage to reputation, have legal or regulatory implications, or can lead to financial loss. The Company cannot expect to eliminate all operational risk, but by initiating a rigorous control framework and by monitoring and responding to potential risks, the Company is able to manage the risk. Controls include effective segregation of duties, access controls, authorisation and reconciliation procedures, staff education, and assessment processes. The Company assessed the potential impact of the new General Data Protection Regulation ("GDPR") before its introduction in May 2018.

C.6 Other Material Risk

Strategic Risk

Strategic risk is the risk of loss arising from adverse business decisions, improper implementation of decisions, or lack of responsiveness to industry changes i.e. the risk associated with implementing the wrong strategy or failing to correctly implement the chosen strategy.

The control and monitoring actions/principles underlying the strategic risk management of the Company are:

- Review at least annually the appropriateness of the high level overall objectives for the Company; the major risks facing the Company; the Risk Appetite for each of these major risks identified. The Board of Directors will ensure continuing appropriateness, at least annually and revisions shall be affected where necessary.
- Ensure the Company Strategy is implemented correctly including approval, review and monitoring of agreed Key Performance Indicators for the Company.

- Ensure all plans are regularly reviewed to ensure that Risk Tolerances are not exceeded individually or in total. Compare actual versus target performance on a regular basis (as defined for each objective) and produce a variance analysis explaining reasons for deviations.

Sensitivity Risk

Actuarial function assesses the impact of varying the underlying assumptions with respect to initial average severity and expected reported loss development on their Best Estimate of Acadia's unpaid claim liabilities and vary severity of -50%/+200% around the selected average severity as well as varying the paid and reported loss development patterns.

Concentration Risk

This risk module looks at the risk regarding accumulation of exposures with the same counterparty, where risk exposures in assets are grouped according to the counterparties involved. A concentration risk charge is generated if the exposure to a given counterparty is in excess of a defined proportion of total investable assets. The concentration risk threshold is based on asset type and credit rating. The excess exposure is then shocked by a factor, again based on asset type and credit rating, to generate the risk charge.

Acadia has one counterparty where the exposure is in excess of the concentration risk threshold. The table below illustrates this exposure;

In US\$000's

Counterparty	Market Value	Credit Rating*	Risk Charge
Parker Hannifin EMEA S.a.r.l.	13,442	BBB	3,539

*The credit rating applied is that of Parker Hannifin Corporation due to the parental guarantee which has been provided in support of the intercompany loan.

No other material risks have been identified.

Further quantitative detail on the risk is assessed and outlined in the Annual QRTs as set out in Appendix 1.

C.7 Any Other Information

No other material risks have been identified.

D. VALUATION FOR SOLVENCY PURPOSES

D.1 Assets

The recognition and valuation basis are in accordance with Solvency II Directives. The Company prepares its financial statements on a going concern basis in compliance with FRS 102, The Financial Reporting Standard applicable in the UK and Republic of Ireland (hereafter referred to as “Irish GAAP”) and FRS 103, Insurance Contracts, issued by the Financial Reporting Council and promulgated for use by the Institute of Chartered Accountants Ireland. The Company is also subject to the requirements of the Companies Act 2014 and the European Union (Insurance undertakings: Financial Statements) (Amendment) Regulations 2016.

Acadia has the following classes of assets;

- Cash and cash equivalents
- Investments (other than assets held for index-linked and unit-linked contracts)
- Loans
- Reinsurance recoverables
- Insurance & intermediaries receivables
- Reinsurance receivables
- Any other assets (referring to prepayments and/or corporation tax recoverable)

Cash and cash equivalents comprise cash at banks and in cash pooling arrangements whereas investments comprise the investment in the BlackRock USD liquidity fund. Carrying amounts approximate fair value due to the short-term nature and high liquidity of the instruments. The loans are intragroup which are measured at the undiscounted amount receivable. These balances are stated at market value for both solvency and financial statement purposes, the only difference being the inclusion of accrued interest in the financial statements, disclosed as a separate line item in the financial statements.

Insurance and intermediaries receivables relate to premiums and other exposures due from policyholders. Overdue premiums have been discounted on the Solvency II balance sheet by half a year as they are expected to be received within a year, and other exposures are reallocated to Solvency II technical provisions.

The valuation of the reinsurers’ share of insurance liabilities (‘reinsurance recoverables’ above) is detailed in the subsequent section, “Technical Provisions”. Reinsurance recoverables are held at the lower of cost or market value/realisable value.

Any other assets for the current year relate to prepayments, which are not allowed under Solvency II, the future cash flow of which has been discounted to derive a market value.

Acadia’s Solvency II balance sheet equity as of 30 June 2022 totals US\$27.85m. Provided on the next page is a reconciliation of Acadia’s FRS balance sheet equity as of 30 June 2022 totalling US\$27.17m and the Solvency II balance sheet equity.

Restatement of the Balance Sheet

Balance Sheet Items (In US\$000)	Statutory Returns	Solvency II	Movement
Investments (other than assets held for index-linked and unit-linked contracts)	8,841	8,841	-
Loans	13,442	13,442	-
Reinsurance recoverables	32,042	13,999	18,043
Insurance & intermediaries receivables	13,120	10,968	2,152
Reinsurance receivables	621	225	395
Cash and cash equivalents	-	(2,232)	2,232

Basic Own Funds	27,172	27,851	(678)

D.2 Technical Provisions

Provision is made for notified claims reserves and future claims on all underwriting years. Provisions are calculated gross of any reinsurance recoveries with a separate estimate being made of amounts recoverable from reinsurers. The Company has regard to the gross and net loss positions as indicated by the claim circumstances reported to date and loss projections carried out using actuarial evaluation.

Reserves for insurance contract liabilities and reinsurance assets are based upon management's best estimate of the ultimate liabilities and are determined with the assistance of the Head of Actuarial

Function. The reserves include estimates for both case reserves (and future claims handling expense) and losses incurred but not reported ("IBNR").

In arriving at these valuations, Acadia uses the following methodology and assumptions:

Best Estimate of Unpaid Claim Liabilities (IFRS)

The overall methodology for estimating Acadia's unpaid claim liabilities is based upon a combination of several actuarial valuation methods that, based on the Head of Actuarial Function's opinion, is believed to accurately reflect the reserve requirement for the individual policy year and line of business:

The Chain Ladder ("CL") Method: estimates the ratio by which cumulative claims to date will increase (or decrease) at annual intervals from the date of policy inception. The 12 to 24-month ratio (for example) is estimated by taking the average ratio observed in policies 24 months or more from their date of inception. This approach assumes the earliest year of origin to experience no future movement. Claims experience is not adjusted for past inflation.

The Loss Ratio Method: an exposure based expected loss approach that often applies the average ultimate loss ratio for earlier years of the portfolio to more recent exposures (e.g. turnover). It is sometimes referred to as the Initial Expected Loss Ratio ("IELR") method.

The Incurred Bornhuetter-Ferguson Method ("IBF"): a blended method of claims development where estimates of ultimate claims derived using a loss development (or Chain Ladder) method are blended with the estimates derived using alternative methods. It is often blended with estimates using the IELR method. A blended approach is preferred for recent, less-developed policy periods because using the chain ladder method in isolation can be particularly unstable. In addition, the use of a blended approach helps provide a smooth and consistent transition from past policy periods to partially complete and future periods.

The Generalised Cape Cod Method ("GCC"): a Bornhuetter-Ferguson methodology in which the exposure based ultimate claims estimates are derived by considering the ratios of the Chain Ladder ultimates to exposure measures. An expected ratio is calculated for each policy period based on a weighted average adjusted for any significant trend, using a decay factor of 75%. The weights used reflect the exposure, the claims development and the proximity to the policy period in question. The proportions developed (Bornhuetter-Ferguson weights) are used to blend the Chain Ladder estimated ultimate claims with the exposure-based estimates.

The Exposure Method: estimates the ultimate value of claims in a given underwriting or accident year in proportion to the exposure measure in that year (e.g. premium or sum insured) compared to other similar years. This is most commonly done by applying an average of the ultimate loss ratio observed in earlier years. This approach gives no recognition to the current level of claims reported in the year under consideration. It is influenced only by claims experience and exposure levels in neighbouring years.

The Head of Actuarial Function estimates ground-up gross ultimates (the sum total of paid claims, case estimates, cost of claims function related overhead costs (ULAE) and IBNR by policy year, allocating an IBNR and ULAE for each line of business and policy year for future claim development).

Acadia has not applied the matching adjustment, volatility adjustment, transitional risk-free interest rate term structure or the transitional deduction in calculating its technical provisions.

Key Assumptions

The Head of Actuarial Function has identified the following assumptions as being the most significant assumptions underlying our methodology:

1. The relatively few claims and lack of extensive development patterns add to the uncertainty of the Best Estimates;
2. That the Best Estimates are neither deliberately overstated nor deliberately understated, and that is equally likely for this to be understated as it is overstated;
3. That the employed techniques and assumptions employed are appropriate for the purpose of determining the Best Estimate, and that the actual amounts required to meet future claim payments may differ, due to the inherent uncertainty of insurance.
4. In order to derive the best estimate cash flows for claims arising from unearned business (both incepted and unincepted), a gross loss ratio has been applied to the corresponding premium exposure per line of business.

The Head of Actuarial Function has used the prior gross loss ratios from the statutory reserving element of this exercise, adding an allowance for ENID. The implicit assumption here is that the unearned exposures will experience similar losses to the historic exposures, with the Solvency II requirement to allow for ENIDs incorporated into the best estimate.

Solvency II Technical Provisions

Solvency II technical provisions are made up of the best estimate and risk margin.

The best estimate is calculated by considering all future cash inflows and outflows required to settle the existing (re)insurance obligations over their lifetime. It represents the mean outcome of all possible scenarios, taking account of how likely they are to occur and their potential variability. In this regard, the best estimate is a probability-weighted average of future cash flows. The best estimate should also allow for the time value of money. The Solvency II best estimate is calculated gross with any recoverables calculated separately following the same methodology. The gross best estimate is made up of a claim provision and a premium provision, relating to past and future exposures respectively.

The Solvency II claims provision is equivalent to the expected net present value of the best estimate claims reserve calculated, with additional allowances for a number of (re)insurance related cash flows, which are discussed in more detail below. The claims provision should also include all unpaid premium relating to earned exposures that are within payment terms.

Under the Solvency II contract boundary definition, any policies which have been bound, even if not incepted as at the valuation date, must be considered in the premium provision. The Solvency II premium provision is therefore equivalent to the expected net present value of the following cash inflows and outflows, relating to unearned exposure from incepted contracts and exposure from unaccepted contracts bound as at the valuation date:

- Cash flows from future premiums in relation to future claims;
- Cash flows arising from future claim events (e.g. claims payments);
- Cash flows arising from Allocated loss adjustment expenses and Unallocated loss adjustment expenses in respect of claims events occurring after the valuation date;
- Cash flows arising from the ongoing administration of policies in-force as at the valuation date; and
- Cash flows arising from salvage and subrogation.

For profit making business, the best estimate of premium provisions may be negative.

Estimates are “best estimates” in the sense that they are intended to be a probability-weighted average of all possible outcomes. Acadia has employed techniques and assumptions that are appropriate for the purpose of calculating its Solvency II technical provisions. The actual amounts required to meet future claim payments may differ from estimates for several reasons, such as model specification error, parameter error and random error due to the inherent uncertainty in insurance. External environment risk factors may cause material deviations in estimates of technical provisions, including persistent negative interest rates, inflation and currency exchange rate fluctuations.

Risk Margin

The Solvency II risk margin is intended to represent an amount that Acadia would be required to pay, in excess of the best estimate of the liabilities, for a third party to assume the risk of running off the existing liabilities. The actuarial calculation of the risk margin is consistent with the Solvency II regulations, applying a 6% cost of capital to the amount of capital required at the beginning of each year to support the run-off of the insurance obligations. These future costs of capital are then discounted to the valuation date and summed to calculate the amount of risk margin required.

Technical Provisions by Line of Business (US\$'000)

Line of Business (in US\$'000)	Best Estimate of Liability (Gross)	Best Estimate of Liability (Net)	Risk Margin	Total Gross Technical Provisions
Motor vehicle liability insurance	34	34	1	35

Fire and other damage to property insurance	10,010	2,340	465	10,475
General liability insurance	5,849	-479	427	6,276
Total	15,893	1,894	893	16,786

Statutory Reserving and Conversion to Solvency II Basis

Claim Provision

The Solvency II claim provision is equivalent to the expected net present value of the best estimate claims reserve, with additional allowances for a number of (re)insurance related cash flows, which are discussed in more detail below. The claim provision should also include all unpaid premium relating to earned exposures that are within payment terms. For Acadia, as at 30 June 2022, the unpaid inwards premium of \$10.8m, and the associated unpaid insurance premium tax receivable, all relate to PDBI policies and are not within credit terms. These therefore appear as a separate debtor item on the balance sheet rather than as part of the technical provisions. There are however \$5.0m of unpaid outward reinsurance premium and \$0.4m of reinsurance commission receivables which are included in the technical provisions. There are \$1.8m of unpaid inwards premiums, relating to the APL Primary and Excess classes and these are offset by the inclusion of unpaid outwards reinsurance premiums of \$1.7m, relating to the PDBI, GL Excess and APL Excess classes.

	30 June 2022			30 June 2021		
Claims Provision (US\$'000)	Gross	RI	Net	Gross	RI	Net
Year End Statutory Reserves	16,302	18,305	(2,003)	16,946	17,242	(296)
Prudence in Stat Reserves	(149)	-	(149)	(131)	-	(131)
SII Expenses	272	249	23	131	-	131
Allowance for ENIDs	153	-	153	253	230	23
Counterparty default	-	(25)	25	-	(18)	18
Unpaid claims cash flows	-	-	-	-	1,443	(1,443)
Unpaid expense cash flows	22	-	22	564	-	564
Unpaid premium cash flows	(1,837)	(1,696)	(141)	-	(2,823)	2,823
Unpaid reinsurance commission	-	97	(97)	(130)	-	(130)
Discounting	(1,349)	(1,445)	96	(349)	(334)	(15)
Net SII Best Estimate Claim Provisions	13,414	15,484	(2,070)	17,285	15,740	1,545

Premium Provision

The premium provision is the discounted best estimate of all future cash flows relating to future unexpired exposure arising from policies that the (re)insurer is legally obligated to at the valuation date. For profit making business, the best estimate of the premium provision may be negative if the premium is unpaid as it will more than offset the claim and expense payments.

As noted above, the unpaid inwards premiums relating to PDBI policies are outside credit terms as at 30 June 2022 and the unearned portion of these is therefore not included in the premium provision.

There are however unpaid outward premiums of \$3.3m, as well as the BBNI outwards reinsurance premium for the APL primary (\$4.1m) policy which is included in the premium provision.

	30 June 2022			30 June 2021		
Premium Provision (US\$'000)	Gross	RI	Net	Gross	RI	Net
Year End Statutory Reserves	16,164	13,737	2,427	13,117	10,753	2,364
Adjustment to best estimate (incl ENIDs)	(8,674)	(7,396)	(1,278)	(6,572)	(5,299)	(1,273)

Counterparty default	-	(12)	12	-	(8)	8
Unpaid premium cash flows	(4,256)	(7,408)	3,152	(3,624)	(11,405)	7,781
Unpaid reinsurance commission	41	295	(254)	(396)	-	(396)
Discounting	(917)	(702)	(215)	(209)	(175)	(34)
Net SII Best Estimate Premium Provisions	2,479	(1,485)	3,965	2,429	6,134	(3,705)

Assumptions

In order to derive the best estimate cash flows for claims arising from unearned business (both incepted and unincepted), a gross loss ratio has been applied to the corresponding premium exposure per line of business.

The prior gross loss ratios from the statutory reserving element of this exercise were used, adding an allowance for ENID. The implicit assumption here is that the unearned exposures will experience similar losses to the historic exposures, with the Solvency II requirement to allow for ENIDs incorporated into the best estimate.

The loss ratios used in this analysis are shown in the table below.

Line of Business	BE Loss Ratio	ENID Loading	SII Loss Ratio
Property	36.4%	2.5%	37.3%
Aviation Product Liability - Primary	48.4%	2.5%	49.6%
Aviation Product Liability - Excess	57.0%	2.5%	58.4%
General Liability - Primary	0.0%	2.5%	0.0%
Employment Practice Liability	100.0%	2.5%	102.5%
Global Excess General Liability	20.0%	2.5%	20.5%
Products Liability	45.0%	2.5%	46.1%
Auto Deductible Reimbursement	25.0%	2.5%	25.6%
Directors & Officers	89.8%	2.5%	92.0%
US Imports Liability	48.7%	2.5%	50.0%

Uncertainty Associated with Technical Provisions

Acadia has historically seen relatively low claim volumes; a result of this is that reserves can appear more volatile than with a larger book – just one extra claim either materialising or failing to materialise can have a relatively large impact. It also reduces the extent to which Acadia's data alone can be relied upon when making projections. In performing this analysis, actuaries have supplemented the claims

data with market benchmarks. Particularly where no or few claims have been reported, the actuaries are forced to place greater weight on prior assumptions and external data.

The Head of Actuarial Function's estimates are "best estimates" in the sense that they are the average of all possible outcomes.

In their judgement, they have employed techniques and assumptions that are appropriate for the purposes of this investigation, given the information currently available. The actual amounts required to meet future claim payments may differ from their estimates for several reasons, such as model specification error, parameter error and random error inherent uncertainty in insurance.

External environment risk factors may cause material deviations in our estimates of technical provisions. Significant external risk factors include:

- Inflation: any significant increase in the consumer price index could lead to the unallocated loss adjustment expenses ("ULAE") increasing by more than what had originally been forecast. Claims inflation could translate into future claims being settled at a higher level than in the past, notably for the Liability lines of business.
- Currency exchange rates: part of the premium received by Acadia is not in USD, therefore it could significantly alter in USD terms (compared to original expectations) if the USD exchange rate were to move away from the business plan estimate.
- Sudden changes in business volumes: since Acadia is a captive, it is often the case that a new line of business is added to its insurance programme depending on the needs of its parent company. However, this would be carried out with a prior assessment by Acadia's risk management function and approval by the Board of Directors.

D.3 Other Liabilities

Aside from Technical provisions, the valuation of which is detailed above, Acadia has the below other classes of liabilities;

- Insurance & intermediaries payables
- Reinsurance payable
- Payables (Trade, not insurance)
- Deferred tax liability
- Any other liabilities

Insurance & intermediaries payables relate to amounts payable for items such as commissions and premium taxes, which are reallocated to technical provisions under SII.

Reinsurance payable relates to ceded premium payable and have been included with technical provisions.

Payables (trade, not insurance) relate to amounts due that are not related to the insurance aspect of the Company. These can include expenses such as management fees, audit fees and actuarial fees. These have discounted the future cash flow to derive a market value.

Deferred tax liability is a Solvency II adjustment in relation to the recognised profit when restating the balance sheet on a Solvency II basis.

For other liabilities, the future cash flows have been discounted to derive a market value and the exposure related to unearned commissions is not allowed under Solvency II.

D.4 Alternative Methods of Valuation

No alternative methods were used.

D.5 Any Other Material Information

There is no other information to report

In respect of relevant quantitative information for this report please see Annual QRT extract in Appendix 1.

E. CAPITAL MANAGEMENT

E.1 Own Funds

The Company has put in place a Capital Management policy to ensure that 'Own Fund' items, both at issue and subsequently, meet the requirements of the Solvency II capital regime. The objectives of the policy are to ensure that on an on-going basis the Company has:

- own fund items available to meet its capital requirements; and
- developed processes to ensure the appropriateness of its own fund items.

As part of the annual review of the medium-term capital plan, the Company reviews the level, composition and classification of own fund items to ensure they continue to meet its own solvency needs, and its regulatory obligations in respect of SCR and MCR. A 3 year forward looking time horizon is used for business planning purposes and any anticipated changes to the Company's business and risk profile are factored into the ORSA process to assess the solvency and capital needs over this business planning period. It is intended that the Company's capital needs will be managed out of its existing pool of own funds and the efficient management of the Company's insurance business. Should additional funds be required outside of that, they will be advanced by the shareholder.

The Company's own funds consist of the following items:

- Issued Share Capital; and
- Retained Earnings.

Any change to the share capital requires the approval of the Shareholder and the Board of Directors. Retained earnings are adjusted on a quarterly basis to take account of the profits/losses earned in the period together with any Solvency II valuation adjustments.

The payment of dividends is considered on an annual basis by the Board of Directors as part of its medium-term capital assessment. Potential dividends will be considered as part of the Company's ORSA process to ensure that the Company will continue to meet its solvency needs over the business planning period.

Any other qualifying own fund item requires the review and approval of the Board of Directors. In such instances, the Board of Directors must ensure that the terms and conditions of any own fund item are clear and unambiguous in relation to the capital classification.

Own fund items at the end of the reporting period and the prior year comparative period are as follows:

In US\$'000	30 Jun 2022	30 Jun 2021
Ordinary paid up share capital	1,000	1,000
Reconciliation reserve	26,172	24,905
Total Tier 1 capital	27,172	25,905
 Total basic own funds	 27,172	 25,905

The movement in basic own funds during the reporting period reflects the profitability of the Company as adjusted for the valuation of net technical provisions on a market consistent fair value basis under Solvency II. The reconciliation reserve represents the Company's retained profits as adjusted for Solvency II valuation principals. The adjustments which arise in the application of these principles are shown in the equity reconciliation below.

At the end of the current reporting period eligible own funds available to meet the Company's SCR are US\$15.87m comprised solely of Tier 1 capital. Eligible own funds available to meet the Company's MCR are US\$3.97m comprised solely of Tier 1 capital.

The equity position as shown in the Company's 2022 year-end financial statements can be reconciled to the basic own funds balance under Solvency II as follows:

In US\$'000	30 Jun 2022
Equity per the Company's financial statements	27,172
Reinsurance recoverables	(18,043)
Adjustment to technical provisions	15,680
Prepayments and other adjustments	3,139
Net deferred tax liability	(97)
Own funds (excess of assets over liabilities for solvency purposes)	27,851

Noted below are the main adjustments to convert Acadia's Statutory balance sheet to a Solvency II balance sheet:

1. Reinsurance recoverables: This reduction has been driven mainly by the inclusion of future premium outwards (-\$9.1m), adjustment of UPR to best estimate losses (-\$7.4m), and discounting of cashflow (-\$2.1m). Also included are Solvency II adjustments for Allowance for Binary Events (\$0.2m), allowance for reinsurance default (-\$0.04m).

2. Technical provisions: This reduction has been driven by adjustment of UPR to best estimate losses (-\$8.7m), the inclusion of future premium inwards (-\$6.1m), discount of cashflow (-\$2.3m) and removal of prudence on reserves (-\$0.1m). These reductions have been partially offset by Solvency II

adjustments for expenses (\$0.3m), unpaid exposures (\$0.01m) and ENIDs (+\$0.3m), and the addition of the risk margin (+\$0.9m).

3. Prepayments and other adjustments: This represents the net total of the following items; Reinsurance Receivables (-\$0.4m), Reinsurance Payables (+\$5.0m) & IPT Payable (+\$0.022m) which are reallocated to Technical Provisions, Insurance Receivables (-\$2.15m) which are currently overdue and are discounted by half a year as they are expected to be received within a year and other exposures have been reallocated to Technical Provisions, the exposure related to Prepayments (-\$22k) and Unearned Commission (+\$0.66m) is removed as it has no expected future cashflows and is therefore not included on the Solvency II Balance Sheet.

4. Net deferred tax liability: A deferred tax liability is recognised in relation to the recognised profit when restating the Balance Sheet to be on a Solvency II basis.

Acadia has no ancillary own funds and there are no transitional arrangements impacting its capital calculations.

Solvency II own funds

Under Solvency II valuation principals, the eligible own funds available to meet the SCR and MCR is US\$27.85m. This is comprised solely of Tier 1 capital.

Acadia has no material ancillary own funds.

Capital management

The total capital of the Company as at 30 June 2022 consists of shareholder's equity of US\$27.17m (2021: US\$25.16m).

Management reviews capital on an on-going basis with a view to maintaining a level of capital sufficient to cover significant statement of financial position risks and regulatory requirements. As at 30 June 2022 the Company has adequate capital to meet these objectives.

E.2 Solvency Capital Requirement & Minimum Capital Requirement

Acadia's SCR as of 30 June 2022 totals US\$15.87m. Acadia's Solvency II recognized own funds totalling US\$27.85m is sufficient to meet its SCR and results in a Solvency Ratio of 175%. Acadia's MCR as of 30 June 2022 totals US\$3.97m. The MCR is calculated through a prescribed formula based on the net technical provisions (excluding the risk margin) and net written premium. It is also constrained to be between 25% and 45% of the SCR.

The following table provides the information on the inputs used to calculate the MCR:

In US\$'000	30 Jun 2022
Linear MCR	520
SCR	15,870
Combined MCR	3,967
Minimum Capital Requirement	3,967

This is broken down into the various components of risk on the next page.

Capital Charges	
Market Risk	The market risk charge has decreased by \$2.9m, predominantly driven by the decrease of \$13.4m in the value of the US\$ call deposit account, which had a negative balance of \$2.2m as at the valuation date. This call deposit account is one of two exposures that Acadia holds towards Parker Hannifin EMEA Sarl, a financial institution with no public credit rating. A parental guarantee is in place for funds held with Parker Hannifin EMEA Sarl, which allows Acadia to use Parker Hannifin's credit quality step of 3 for these accounts.
Counterparty Default Risk	The counterparty default risk has increased by \$0.5m, driven by an increase in the value of receivables that are outside of credit terms. This is partially offset by a reduction in the value of the financial risk mitigation arising from the benefit of the parental guarantee. This applies to exposures held towards Parker Hannifin EMEA Sarl, which have decreased in value since the previous year, and is subject to counterparty default risk.
Non-Life Underwriting Risk	The Premium/Reserve Risk has decreased by \$0.4m due to a decrease in net provisions for claims outstanding at the valuation date. This is largely attributable to a reduction in unpaid outwards reinsurance premium payable and a decrease in net best estimate reserves. Catastrophe Risk has increased by \$0.3m driven by an increase in the total sum insured under the property policy and an increase in the gross written premium for the property policy, impacting the natural catastrophe charge.

Acadia's SCR has decreased by US\$1.06m relative to its SCR as of 30 June 2022, driven predominantly by the decrease in a Concentration Risk \$2.97m, due to decrease in the value of the US\$ call deposit account, which had negative value as of yearend. The decrease is offset by an decrease in the Company's diversification benefit, which stands at -US\$4.1m and slight increase in the Non-life Underwriting Risk as well as Counterparty Default Risk.

Individual movements in capital charges are outlined in the table below:

Risk Charge In US\$'000	30 June 2022	30 June 2021	Movement
Premium/Reserve Risk	500	917	-417
Catastrophe Risk	10,054	9,709	345

Available Capital	27,851	25,905	1,946
Surplus/Deficit	11,981	8,971	3,010
Solvency Ratio	175%	153%	22%

Data

Estimates are based on:

- information contained in Acadia's 30 June 2022 financial statements
- Actuarial estimates of Acadia's unpaid claim liabilities as of 30 June 2022.

Methodology

The Company calculates the SCR using the standard formula. The actuarial calculation is based on application of the Solvency II regulations as detailed in the Commission Delegated Regulation (EU) 2015/35 as published on October 10, 2014 ("Delegated Acts").

It does not use simplifications or undertaking specific parameters when calculating the risk modules and sub-modules of the standard formula.

E.3 Use of Duration Based Equity Risk Sub Model in calculation of the SCR

There was no use of duration based equity risk sub model in the calculation of the SCR

E.4 Differences between the Standard Model & Any Internal Model

Acadia used the Standard Model in determining the SCR and MCR and did not rely on any internal model.

E.5 Non-Compliance with MCR and SCR

There are no issues with non-compliance with the MCR and SCR.

E.6 Any Other Material Information

There is no other information to report.

E.7 Additional Voluntary Information

There is no additional voluntary information to report.

In respect of relevant quantitative information for this report please see Annual QRT extract in Appendix 1.

The following additional details taken from the Annual Quantitative Reporting Templates are appended to this report:
