SUMMARY

This Report refers to the business of adidas International Re DAC ('adidas International Re', 'the Company'), a captive composite reinsurer, authorised and supervised by the Central Bank of Ireland. It provides the reader with information on the Company's business and performance, system of governance, risk profile, valuation for solvency purposes and capital management for the reporting period ended 31 December 2023.

adidas International Re has prepared this report in accordance with the relevant articles of the Commission Delegated Regulation (EU) 2015/35, together with the Guidelines on reporting and public disclosure issued by EIOPA.

The Company's business strategy is to provide reinsurance coverage for certain employee benefits, property, marine, liability and supplier failure risks of adidas, one of the world's largest sportswear companies. The impact of insurance risk volatility on the Company's capital base is mitigated through the purchase of retrocession from appropriate counterparties. Investment of the Company's funds is in line with the documented investment strategy, reflecting a 'prudent person' approach to the management of counterparty, concentration, interest rate and currency risk.

The Board has identified the key risks to which adidas International Re is exposed and established appropriate corporate governance, risk management and reporting mechanisms to ensure that the identified risks remain relevant and that they are managed and reported on with appropriate levels of detail and frequency. The Company has established a comprehensive suite of risk policies and implemented a series of internal controls to ensure that adidas International Re can be managed in accordance with its governance and risk management systems. Documented escalation mechanisms are in place to ensure that any breaches in risk limits and tolerances, internal controls and governance requirements can be reported promptly to the appropriate individuals. Risks to which the Company is exposed are well understood and are used to determine the level of solvency and capital required over the business planning period and to better inform decision-making within the Company.

There were no material changes to adidas International Re's business and performance, system of governance, risk profile, and valuation for solvency purposes over the reporting period.

As at 31 December 2023, the Company had eligible own funds of €37.0m (2022: €37.8m) available to meet its Solvency Capital Requirement ('SCR') of €15.7m (2022: €14.9m), resulting in a Solvency Ratio of 235% (2022: 253%) which is in compliance with the regulatory solvency requirements per the Solvency II regulations. The Board of Directors is satisfied that the Company has adequate and appropriate capital to support its business operations. The Minimum Capital Requirement ('MCR') was also satisfactorily met at the year-end. There were no instances of non-compliance with the capital requirements during the period.

A. BUSINESS & PERFORMANCE

A.1 Business

adidas International Re DAC was incorporated in Ireland in 2002, and in line with the requirements of the Companies Act 2014, converted to a designated activity company ('DAC'), limited by shares, effective 23 June 2016. adidas International Re is a captive composite reinsurance undertaking, underwriting only the risks of adidas. adidas International Re conducts all of its significant business activities from its offices in Ireland, including:

- underwriting;
- premium invoicing and collection;
- claims reserving and payments; and
- investing.

The Company's operating and registered address is Third Floor, The Metropolitan Building, James Joyce Street, Dublin 1, Ireland.

adidas International Re is authorised by the Central Bank of Ireland ('CBI'), under the European Union (Insurance and Reinsurance) Regulations 2015, to carry out the business of life and non-life reinsurance.

Grant Thornton is the appointed external auditor of the Company and is located at 13-18 City Quay, Dublin 2, Ireland.

The insurance supervision division at the CBI may be contacted at their offices in New Wapping Street, North Wall Quay, Dublin 1, D01 F7X3, Ireland.

The Company has underwritten employee benefits risks of adidas' employees on a reinsurance basis worldwide since 2003. The risks relate to employee death, disability, medical costs, or accident and are written on a country-by-country basis. The majority of the reinsurance treaties renew on 1 January each year.

The Company has also entered into reinsurance agreements covering specific retention on the risks below:

- Property
- Marine
- Liability
- Supplier Failure

The Company reinsures risks within Europe, North, South & Central America, the Middle East, Asia, Australia, and New Zealand.

adidas International Re DAC

adidas International Re is a 100% subsidiary of adidas International B.V., a company incorporated in the Netherlands.

The Company's ultimate parent undertaking is adidas AG, a publicly traded, German-domiciled company listed on the "Deutsche Börse" stock exchange in Frankfurt. The Group structure is outlined below:

Details on other Group subsidiaries and related undertakings are published in the adidas Annual Report and Financial Statements, 2023, which is available to download at <https://www.adidas-group.com/en/>

The operation of the Company is subject to the local regulatory requirements in Ireland within which it operates. Such regulations not only prescribe approval and monitoring of activities but also impose certain restrictive provisions, for example, capital adequacy, to minimise the risk of default and insolvency on the part of the Company to meet unforeseen liabilities as they arise.

There have been no significant events during the reporting period which have had a material impact on the Company.

A.2 Underwriting Performance

The principal risks and uncertainties that the Company faces are, by the very nature of the business, those for which it provides or has provided reinsurance cover. The Company seeks to ensure that it collects sufficient premium income to meet the cost of potential claims over time. Still, the uncertainty surrounding the severity and frequency of claims can lead to significant variation in the Company's performance in the short term.

Whilst considerable judgement is involved, the Directors adopt an appropriately prudent approach to providing and valuing adequate reinsurance reserves, with annual support provided by the external actuary who serves as the Head of the Actuarial Function.

The Company has implemented various risk mitigation measures to limit the Company's exposure and reduce the volatility of its losses, hence, to underwrite performance. adidas International Re purchases multi-line multi-year retrocession protection to assist with balance sheet protection.

adidas International Re DAC

Since the Company prepares its financial statements in accordance with FRS 102, the underwriting performance information outlined in this section is on an FRS 102 basis.

(€)	2023	2022
Gross premiums earned	45,639,132	38,400,093
Outward reinsurance premiums earned	(4,500,500)	(4,500,000)
Earned premiums, net of reinsurance	41,139,132	33,900,093
Gross claims incurred	(26,916,943)	(36,248,810)
Claims incurred – recoverable from reinsurers	(5,659,613)	5,659,613
Claims incurred, net of reinsurance	(32,576,556)	(30,589,197)
Allocation of investment income to the technical account	516,387	54,384
Operating Expenses incurred	(6,229,749)	(5,247,074)
Other Technical charges, net of reinsurance		
Technical profit	2,779,214	(1,881,794)

Proportional reinsurance premiums split by line of business are as follows:

(€'000)	2023	2022	Variance
Line of Business			
Marine, Aviation & Transport	5,734	4,723	1,011
Fire & Other Damage to Property	5,325	4,379	946
General Liability	651	672	(21)
Miscellaneous Financial Loss	801	796	5
Medical Expense Insurance	28,628	23,330	5,298
Total Earned Premium, Net of Reinsurance	41,139	33,900	7,239

Premiums written relate to business incepted during the financial year and have resulted from contracts of reinsurance concluded in the Republic of Ireland.

Provision is made for notified losses on all underwriting years. Provisions are calculated gross of any reinsurance recoveries, with a separate estimate of amounts recoverable from reinsurers. Claims incurred by line of business are set out below:

(€'000)	Net Claims Paid, Net of Reinsurance			Movement in Claims Provisions		
Line of Business	2023	2022	Variance	2023	2022	Variance
Marine, Aviation & Transport	(5,813)	(3,688)	(2,125)	2,401	(5,290)	7,691
Fire & Other Damage to Property	(1,577)	(2,319)	742	(1,073)	1,094	(2,167)
General Liability	(2,608)	(78)	(2,530)	2,275	(3,067)	5,342
Miscellaneous Financial Loss	-	-	-	(223)	298	(521)
Medical Expense Insurance	(23,769)	(18,061)	(5,708)	(2,190)	521	(2,711)
Total	(33,767)	(24,146)	(9,621)	1,190	(6,444)	7,634

The profit after tax for the year ended 31 December 2023 amounted to €2,148k (2022: loss €601k).

A.3 Investment Performance

The Company allocates its investment portfolio as described below:

Cash and cash equivalents – Comprise of cash in hand and other short-term, highly liquid investments that are readily convertible to cash and are subject to an insignificant risk of changes in value.

Deposits with credit institutions – The Company holds short-term, fixed deposits with preapproved credit institutions.

Investment Funds - Investments in money market funds are held at market value.

The short-term maturities of the above asset classes and the business's liquidity requirements ensure that funds do not need to be withdrawn prior to maturity to settle liabilities.

Intercompany Loan - Available funds are invested, as deemed prudent by the Board of Directors, in three intercompany loans with adidas AG. The interest income earned for the financial year ended 31 December 2023 amounted to €352k (2022: €23k).

A return of €270k (2022: negative €70k) was earned on cash and investment funds. Interest income of €274k (2022: €149k) was earned on funds withheld by ceding undertakings.

The Company has no investments in securitised asset classes, and all investment income is recognised in the Company's income statement.

A.4 Performance of other activities

adidas International Re does not engage in any activities other than those associated with captive reinsurance and has not entered into any leasing agreements.

A.5 Any other information

The Company recorded a foreign exchange loss of €606k (2022: €1,148k gain).

On 24 February 2022, Russia commenced an invasion of Ukraine. The invasion has had a significant impact on several financial markets. While the Company provides some insurance cover to risks situated in the Ukraine, these exposures have been assessed as not material. The Board of directors has not identified any additional exposures for the Company arising from the military conflict in the Ukraine.

In addition, the conflict in the Middle East is set to continue to impact the global economy. The Company's marine cargo reinsurance program currently only provides cover for shipments via the Red Sea on a case by case basis, with each shipment requiring a special declaration to be submitted to the reinsured. The Board of directors will continue to monitor the situation as it develops.

B. SYSTEM OF GOVERNANCE

B.1 General information on the system of governance

To meet the requirements for sound corporate governance, ensure efficient conduct of business, and protect the interests of the Company's stakeholders, the Company has a comprehensive Governance and Risk Management system in place.

The Board of Directors of the Company ('the Board') acknowledges its responsibility to ensure that risks are fully understood and appropriately managed and has taken appropriate steps to ensure that risk management, reporting, and control processes have been put in place in a manner which reflects the nature and scale of the captive's activities.

The Governance and Risk Management System of the Company may be described as relying on four cornerstones:

- 1) Governance Framework, aligned with the Company's strategic objectives, providing top-level oversight by the Board, clear ownership, accountability for risks, and clear escalation and reporting channels.
- 2) Risk Management Framework details the Company's strategic objectives in documented Risk Policies. Each risk, limit, and operational checkpoint, as functional identification, mitigation, and monitoring processes documented.
- 3) A series of Internal Controls defining the architecture of processes required to manage the Company in accordance with its governance and risk management framework.
- 4) A Risk Register combining operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's strategic objectives.

To achieve the Company's objectives, the Board has established a system of governance with the following core components:

- the Board of Directors is the focal point of the governance system and is ultimately accountable and responsible for the performance and conduct of the Company and, as such, must have at its disposal all required capabilities to achieve its duties;
- all authority emanates from the Board of Directors, and responsibilities are delegated in such a manner to ensure that no one individual has unfettered powers of decision;
- an embedded Compliance Function aiming to ensure the continuous compliance of the Company with all applicable legal, regulatory and administrative requirements;
- an appropriate segregation of duties to enable the Risk Management, Internal Audit, Actuarial and Compliance Function to perform risk and business control mitigation, monitoring and reporting tasks;
- a meaningful and practical approach in documenting policies and strategies to formalise all processes in an efficient and fit-for-purpose manner; and
- structured reporting processes to enable an appropriate escalation of risks and issues to the Board of Directors to ensure a clear and comprehensive information process allowing the Board to conduct business efficiently and prudently in line with the strategic objectives.

According to these principles, the chosen governance model is one of "three lines of defence", which is illustrated as follows:

The Board undertake responsibility for performing the equivalent function of an Audit Committee in relation to the reporting period ended 31 December 2023.

This structure has remained the same in the period. Given the limited scale and complexity of the Company, and having reviewed the risks facing the Company thoroughly, the Board is satisfied that the system of governance in place is adequate.

Key Functions

The key functions of Risk Management, Internal Audit, Actuarial, Compliance and Operations have clear and defined lines of reporting directly to the Board. This is facilitated by the straightforward nature of the Company's structure and fit-for-purpose documented policies and procedures, which are clearly communicated and well-understood by all relevant parties. The Board has ensured that the key functions are appropriately resourced and have the necessary authority and operational independence to perform their roles. The Company has engaged Aon Insurance Managers (Dublin) Limited ('AIMD') for the provision of management services under the terms of an outsourced service and management agreement which the Board of Directors oversees.

Remuneration and material transactions

The members of the Board of Directors, with the exception of the Independent Non-Executive Director, receive no remuneration for their services as directors to the Company. There are no employees, and consequently, no remuneration is paid.

As a captive reinsurer, all the Company's inward premium flows and outward claims payments relate to reinsured risks of the shareholder group. The Company also has three intercompany loans advanced to adidas AG. Other than these transactions, which arise in the normal course of business, the Company had no material transactions during the reporting period with members of the shareholder group and none with members of the Board of Directors.

B.2 Fit and proper requirements

The Company has documented its Fitness & Probity policy specifying the Company's approach to selecting and assessing the persons who effectively run the Company or are responsible for other key functions.

In selecting individuals as directors or function holders, the Company takes into account the following factors:

- specific requirements of the role
- the skills, experience, and relevant qualifications of the proposed individual
- results of due diligence enquiries
- conflicts of interest
- time requirements and other commitments
- competence and integrity
- financial soundness

Consideration is given to ensuring an appropriate mix of knowledge, skills and experience across the Board of Directors. For roles requiring specialist skills, e.g., Head of Actuarial Function, only those individuals possessing the pertinent qualifications and expertise will be considered.

For those roles which the CBI prescribes as Controlled Functions (CFs) and Pre-approval Controlled Functions (PCFs), the Compliance Function adopts appropriate control and due diligence processes in the selection and vetting of such individuals to ensure that they meet the regulator's fit and proper criteria. Written approval from the CBI is obtained prior to the appointment of PCFs. Appointed individuals are required to maintain ongoing compliance with the Standards of Fitness & Probity and the guidance issued by the CBI. The Company assesses this on an annual basis.

B.3 Risk Management System including the own risk and solvency assessment

The Company has taken appropriate actions to:

- embed risk management as a key function within its governance structure; and
- develop and maintain effective processes and reporting procedures to identify, measure, monitor, manage and report continuously the risks to which the Company is exposed.

Risk refers to the effect of uncertainty on the Company's ability to meet its objectives. Risk management is a systematic approach to protect the business resources and income against losses and unexpected events so that the objectives of the Company can be achieved without unnecessary disruption.

The Company's Risk Management System:

- sets out the level of risk acceptable by the Company (Risk Appetite and risk tolerance);
- identifies the risks which represent a threat to the achievement of its strategic objectives;
- identifies, defines and regularly measures key risk indicators enabling efficient monitoring of risks;
- defines the appropriate actions to reduce the Company's risk exposure;
- ensures the risk management framework is implemented in day-to-day business processes; and
- regularly reviews controls and mitigation actions to ensure that they remain relevant and effective.

The Company's Risk Management System has been clearly documented and specified through specific risk management policies for each key risk category to achieve these objectives. The key risk categories for which the Company has set up specific control and monitoring mechanisms are:

- Underwriting/Reserving
- Asset Liability Management ("ALM")
- Investment
- Liquidity and concentration
- Operational
- Reinsurance and other risk mitigation techniques
- Strategic

In addition, an outsourcing policy defining the key rules and criteria to be followed by each service provider has been documented.

Own Risk and Solvency Assessment

The Company annually performs its Own Risk and Solvency Assessment ('ORSA') process to provide its Board of Directors with a forward-looking risk and capital assessment. The adequacy of the available capital, the Risk Appetite Framework and the appropriateness of the risk limits are assessed for the business planning period, considering the evolving risk profile. To this end, risk, and scenarios to which the Company is exposed during the business planning period and which may affect the capacity to meet its reinsurance obligations or threaten the achievement of its business objectives are taken into account.

Stress testing and scenario analysis are used to assess whether the available and future capital are sufficient in both expected and stressed situations. Business projections, stresses and scenarios are compiled by the Operations Functions with input and agreement from the Board of Directors to ensure that these are appropriate for the Company.

Capital and solvency projections are conducted by the Actuarial Function and validated by the Risk Management Function. Where applicable, any future additional capital needs will be identified and aligned to the Company's capital management plan, i.e., defining the measures to restore the Company's solvency margin should the assumed scenarios occur.

In line with CBI requirements, the Head of Actuarial Function provides an actuarial opinion to the Board of Directors in respect of the ORSA once the results of the ORSA process are presented to the Board for review and challenge. Following feedback and approval from the Board, the Company's ORSA report is finalised, and the results are submitted to the CBI within two weeks.

The ORSA report provides clarity over projected risk assessments, and solvency needs to three different stakeholders:

Stakeholder	Expectation	ORSA Report
Board of Directors	Matching projected risks vs, the Risk Appetite framework.	Provides a clear and prospective understanding of critical risk exposures and their relationship with Risk Appetite boundaries.
Shareholders	Detailed and prospective understanding about the risk of bankruptcy and potential need for future additional capital.	Provides a plan for capital needs on the time horizon of the financial planning.
Supervisory Authority	Detailed and prospective understanding of potential ORSA deviations compared to solvency capital requirements	Gathers information about: • projected Solvency ratios; and • explanations about deviations due to specific critical risks exposures.

The ORSA process described above ensures that the ORSA is integrated in the Company's decision-making and business planning process. Furthermore, monitoring procedures as set out in the risk management policies ensure that risk exposures are measured on a regular basis triggering exception report to the Board.

The capital risk appetite for adidas International Re is to sustain its capital at a level sufficient to always meet the Regulatory Solvency Capital Requirement. The Board of Directors maintains a prudent approach to capital to ensure that adidas International Re is in a comfortable position to meet this obligation.

B.4 Internal Control System

The Internal Control System embedded in the Company's operations is a mix of processes undertaken by all stakeholders within the Company to provide reasonable assurance that the strategic objectives will be achieved.

To achieve the aforementioned objectives, the Internal Control framework of the Company is structured around five complementary components.

Component	Contents
1) Control environment	A strong "risk and control" culture is embedded within the Company's operations through the continuous oversight of the Board of Directors and the communication to all internal stakeholders of all governance and risk principles through the Company's governance manual.
2) Risk assessment	Procedures and policies are detailed and formalised to disclose the way of identifying, managing, controlling, mitigating, and reporting issues relating to each risk category.
3) Reporting channels	Clear and structured reporting processes are in place enabling the Board of Directors to have access to relevant, complete, reliable, correct, and timely communication related to internal as well as external events.
4) Monitoring process	The appropriate escalation of significant issues to the Board of Directors, the ongoing involvement of all internal stakeholders as well as the Internal Audit process enables the Company to continuously monitor and adapt when necessary, its Internal Control System.
5) Control activities	The Company has developed a comprehensive set of preventive, detective or corrective control actions embedded in its daily operations.

To set out how the Internal Control System is implemented, the Company's processes and related control activities are documented, monitored, and reviewed on a regular basis.

These items are designed by the Risk Management Function, approved by the Board of Directors, and evaluated by the Internal Audit Function. They are reviewed as often as necessary but at least annually.

Compliance Function

The Company has outsourced its Compliance Function to its Insurance Managers. The Insurance Managers have appointed a Head of Compliance who is responsible for overseeing all compliance activities and ensuring the Compliance Function of the Company is adequately resourced. The Compliance Function reports to the Board at each and every Board meeting on its activities.

The responsibilities of the Compliance Function include:

- utilisation of compliance management practices that contribute to the use of sound, responsible and sustainable business practices by the Company;
- presentation of an annual compliance plan to the Board of Directors, outlining specific areas which it will focus on during a particular year;
- promotion of a culture of compliance within the organisation;
- maintenance of a comprehensive compliance risk management control and reporting system in conjunction with the Risk Management Function to assist in managing the compliance risk faced by the Company;

- consideration of possible future changes in the legal environment and their potential effect on the Company as well as providing regular compliance and regulatory updates to the Board of Directors;
- identification and communication throughout the Company the laws, regulations, and codes of conduct to which the Company is subject and assisting to embed compliance with these in the way the Company does business; and
- investigation and follow up of compliance breaches, ensuring timely reporting to the Board and in certain circumstances to outside bodies such as the CBI.

B.5 Internal Audit Function

Purpose and Objectives

The purpose of the Internal Audit Function is to serve as an independent function that objectively evaluates and recommends improvements with respect to the Company's Internal Control System by facilitating an objective and independent assessment of the processes and controls in place.

It assists the Company in accomplishing its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes employed by the Company. The audit approach is risk based and in line with an annual audit plan which is provided by the Head of Internal Audit to the Board of Directors.

The Internal Audit Function and the appointed Head of Internal Audit report directly to the Board of Directors.

Independence and Impartiality

The Company's Internal Audit Function has been established to be independent of the activities audited, the operational functions and the Board of Directors.

The Internal Audit Function is free to report its findings and appraisals and to disclose them to the Board as required. This principle of independence ensures that the Internal Audit Function reports directly to the Board of the Company.

B.6 Actuarial Function

The Company has established an effective Actuarial Function, including a nominated Head of Actuarial Function ('HoAF') approved by the CBI, which carries out the following key tasks:

- coordination of the calculation of technical provisions in conjunction with other outsourced actuarial resources.
- ensuring the appropriateness of the methodologies, underlying models and assumptions made in the calculation of technical provisions.
- assessment of the sufficiency and quality of the data used in the calculation of technical provisions. Where relevant, the Actuarial Function will provide recommendations on internal procedures to improve data quality.
- estimation of Solvency II technical provisions (both claims and premium provisions)
- comparison of best estimates against experience.

- reporting to the Board of Directors on the calculation, reliability, and adequacy of technical provisions.
- calculation of the Solvency and Minimum Capital Requirements at the balance sheet date.
- ensuring results of technical provisions can efficiently feed into solvency capital calculations and Quantitative Reporting Templates (QRTs) on both a quarterly and annual basis.
- contributing to the effective implementation of the Risk Management System, in particular:
 - i. with regard to risk modelling underlying the calculation of the Solvency and Minimum Capital Requirements; and
 - ii. the application of stress scenarios to the solvency calculations as part of the Company's ORSA process.
- provision of opinions on:
 - Technical provisions
 - Solvency position
 - Underwriting Policy
 - Reinsurance arrangements
 - ORSA

The HoAF reports to the Board of Directors and issues a report in writing at least annually documenting all of the material tasks that have been undertaken by the Actuarial Function during the reporting period.

In establishing the Company's Actuarial Function, the Board of Directors has ensured that the persons involved have the requisite qualifications and demonstrable experience in the area of non-life reserving and are fully conversant with the Solvency II requirements for the calculation of Technical Provisions.

B.7 Outsourcing

All functions and activities of the Company are eligible to be outsourced provided that specific criteria are satisfied in each instance.

The Board is responsible for the approval and termination of all outsourcing arrangements of critical or important functions or activities. Critical or important functions or activities include key functions relating to the Company's System of Governance and all functions within the Company that are fundamental to carry out its core business. The Board is responsible for ensuring notification to the CBI is made in a timely manner prior to the outsourcing of critical or important functions or activities, and thereafter where there have been material developments in relation to the service provider.

The objectives of adidas International Re's Outsourcing Policy are to ensure that the outsourcing of critical or important operational functions or activities does not lead to:

- Reduction in the Board's responsibility for, or influence over, key functions of the Company.
- Material impairment of the quality of the Company's System of Governance.
- Any impairment of the Company's ability to meet its regulatory requirements.
- Non-adherence to the Company's approved policies and procedures.
- Undue increases in operational risk or cost.
- Material impairment of the Company's ability to fulfil its obligations to stakeholders.
- Conflicts of Interest.
- Breach of the Company's data protection obligations.

The Board is responsible for assessing the risks associated with the outsourcing of critical or important functions or activities, carrying out the appropriate due diligence on the outsourced service provider and for reviewing the performance of outsourced service providers against their agreed and documented Service Level Agreements ('SLA').

The management of the Company is coordinated and carried out at its place of business in Ireland. adidas International Re engages outsourced service providers to access the expertise and strength and depth of resources necessary to manage the specific requirements of a regulated captive reinsurance company operating on a global basis.

The following critical or important functions / activities are outsourced:

Critical or important function	Outsourced Service Provider	Jurisdiction
Underwriting and claims administration	Aon Insurance Managers (Dublin) Limited (AIMD)	Ireland
Finance and accounting	AIMD	Ireland
Compliance Function	AIMD	Ireland
Risk Management Function	AIMD	Ireland
Actuarial Function	Barnett Waddingham LLP	United Kingdom
Internal Audit Function	adidas and Aon Commercial Services Ireland Limited	Germany and Ireland

B.8 Any other material information

The Board is satisfied, based on its assessment of the frameworks which have been established and are in use, that the Company's system of governance is appropriate and adequate for the nature, scale, and complexity of the risks inherent in its business operations.

There are no other material items to report in this section.

C. RISK PROFILE

The Risk Appetite Framework adopted by the Board sets out the level of risk that the Company is prepared to accept in the pursuit of its strategic objectives. It sets out:

- the Company's overall philosophy to risk taking and the expectations of shareholders;
- the Company's tolerance to loss of capital, profit volatility and other specified measures; and
- the risk limits that are acceptable in terms of exposures to different types of risk.

The Company's Risk Register combines operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's strategic objectives.

The Board's annual ORSA process is based on the Company's current and expected risk profile over the business planning period and supports the Board in achieving its strategic objectives by taking a structured and combined approach of strategy, risk management and capital management.

C.1 Underwriting risk

The Company underwrites contracts that transfer insurance risk. The risk under any reinsurance contract is the possibility that the insured event occurs and the uncertainty that the Company will have sufficient assets to satisfy the amounts payable under the contract. The Company seeks to ensure that it collects sufficient premium income to meet the cost of potential claims over time, but the uncertainty surrounding the severity and frequency of claims can lead to variation in the Company's performance over the short term. Whilst considerable judgement is involved, the Directors ensure that suitable processes are in place to ensure the reliability, sufficiency, and adequacy of the statistical and accounting data to be considered in both premium pricing and loss reserving exercises.

As the Company is a captive reinsurer, it is effectively reinsuring the risks of one customer, its parent group, and thus is exposed to risk concentration. However, diversification is achieved through the varying geographical locations of the underlying risks.

The principal assumptions underlying the Company's estimation of liabilities is that the Company's future claims development will follow a similar pattern to past claims development experience. Additional qualitative judgements are used to assess the extent to which past trends may not apply in the future, for example, isolated large claim occurrences, economic conditions, internal factors such as portfolio mix, policy conditions and claims handling procedures. Judgement is further used to assess the extent to which external factors, such as judicial decisions and government legislation affect the estimates, especially taking account of the longer-term nature of the risks which the Company underwrites.

The Company manages these risks through the setting of appropriate policy limits and having adequate retrocession arrangements in place. The Company also monitors emerging issues and factors in their potential impact on the Company's pricing and claims reserving.

The primary risk mitigation technique utilised is the purchase of retrocession, as this provides balance sheet protection, from both claims' severity and frequency, in an economically and administratively efficient manner. The effectiveness of these retrocession arrangements is assessed on a quarterly basis through the preparation of the Company's management accounts and reviewed at an overall

level on an annual basis. The primary focus of the Company's retrocession strategy is on the security and financial stability of reinsurers selected.

The Company takes all reasonable steps to ensure that it has appropriate information regarding its underwriting exposures.

Annual support and certification are provided by the Company's Actuarial Function.

Sensitivity analysis is also performed for underwriting risks by selecting conservative movements of gross and net claims reserves for financial statements purposes and holding all other assumptions constant.

(€)	Gross Loss reserves	Ceded loss reserves	Impact on PBT for the year	Impact on Equity for the year
31-Dec-23				
Increase in loss reserves by 10%	4,345,794	(743,480)	(3,602,314)	(3,152,025)
Decrease in loss reserves by 10%	(4,345,794)		4,345,794	3,802,570
31-Dec-22				
Increase in loss reserves by 10%	4,464,752	-	(4,464,752)	-
Decrease in loss reserves by 10%	(4,464,752)	-	4,464,752	-

There were no material changes to the measures used to assess the underwriting risk exposure or the material risks over the reporting period. The impact of the gross loss reserves is mitigated by the reinsurance agreements in place.

C.2 Market risk

The risk of future changes in market prices, which would result in devaluation of investable assets, may result from several factors, including, but not limited to, value, liquidity, duration, composition, interest rates, foreign exchange rates and market fluctuations. The Company diversifies its portfolio to reduce the exposure to market fluctuations and market risk concentrations.

adidas International Re has an investment strategy in place in line with its Risk Appetite Framework and the related 'Prudent Person' regulatory requirements. The Company endeavours to:

- prudently invest with consideration of the prevailing financial market environment;
- ensure the Company invests appropriately so as not to result in the Company failing to meet its Solvency Capital Requirements;
- ensure that the Company holds assets of sufficient value and liquidity to meet all liabilities as they become due;
- maximise investment return within the levels of risk as defined by the Company's Risk Appetite;
- ensure compliance with the Liquidity Strategy and Policy;
- ensure compliance with the Asset-Liability Management Strategy and Policy; and
- ensure effective risk management of investments at all times, with due consideration of the risks associated with investments and procedures to monitor, manage and report these risks in a timely manner as part of the Company's overall Risk Management System.

Interest rate risk arises on the return on the Company's investments including cash, call deposits, investment funds and the intercompany loans. The Company does not have significant interest rate risk as it primarily invests in short term instruments.

Diversification is achieved through investing in a mix of assets. The concentration risk capital charge decreased slightly on the prior year mainly from the decrease in total amount of assets considered in the concentration submodule. This increase was within the risk appetite set by the Board.

The Company is exposed to currency risk to the extent its assets and liabilities are denominated in a currency different from its functional currency. The Company seeks to mitigate currency risk by matching the assets and liabilities which arise in different currencies. The Company is exposed to foreign currency movements on the settlement of premiums and for claims up to the value of the denominated exposure held by the Company.

There were no material changes to the measures used to assess the market risk exposure or the material risks, other than concentration risk, as noted above, over the reporting period.

C.3 Credit risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. The assets that are exposed to credit risk are:

- Cash and cash equivalents
- Deposits with credit institutions
- Investment funds
- Loans with Group undertakings
- Receivables from reinsurers

To manage these risks, funds are placed in accordance with established policies and with highly rated third-party institutions. The sensitivity of the Company's solvency requirements to changes in the credit profile of its asset portfolio was assessed as part of the investment decision.

The Company recognises the credit risks associated with its reinsurance arrangements. The Company manages its reinsurance risks by establishing a reinsurance strategy and this strategy sets out the minimum requirements for any reinsurance counterparty.

The Company retrocedes a portion of risk to reinsurers. The purchase of retrocession does not relieve the Company of its obligation to its policyholders and accordingly, a credit risk exists to the extent that any retrocessionaire is unable to meet the obligations assumed under such retrocession agreements.

The Company mitigates this credit risk by reinsuring with counterparties who are considered appropriately credit worthy. Reinsurers that are not rated or do not fall within the pre-defined rating categories are approved on a case-by-case basis. The creditworthiness of reinsurers is monitored on a regular basis.

There were no material changes to the measures used to assess the credit risk exposure or the material risks over the reporting period.

C.4 Liquidity risk

The Company is exposed if proceeds from financial assets are not sufficient to fund obligations arising from its reinsurance contracts. The Company can be exposed to frequent calls on its available investment assets, principally from reinsurance claims. Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet cash commitments associated with financial obligations.

The Company has determined that liquidity risk does not represent a significant exposure to its business. This assessment is based on the fact that the Company holds its investments in highly liquid assets which it can access immediately or within a very short time frame without incurring material costs or penalties. Investments are in compliance with the Company's investment guidelines.

There were no material changes to the measures used to assess the liquidity risk exposure or the material risks over the reporting period.

The total amount of expected profits included in the future premiums is €6.3m (2022: €10.7m).

C.5 Operational risk

Operational risk is the risk of loss arising from system failure, human error, fraud, or external events. When controls fail to perform, operational risk can cause damage to reputation, have legal or regulatory implications, or can lead to financial loss. The Company has a rigorous control framework and monitoring process in place to manage operational risk. Controls include effective segregation of duties, access controls, authorisation and reconciliation procedures, staff education, and assessment processes. Outsourced activities are monitored and managed in the same manner in line with the Outsourcing policy.

The Company cannot expect to eliminate all operational risk, but by initiating a rigorous control framework and by monitoring and responding to potential risks, the Company is able to manage the risk.

In addition, adidas International Re is subject to Internal and External Audit review.

adidas International Re maintains a regulatory dialogue with the CBI to mitigate the risk of any potential sanction or compliance breach, as well as using expert, industry-leading service providers to provide its outsourced functions, which helps avoid any material error or delay. To ensure the quality of the outsourced functions is as high as possible, adidas International Re puts in place service-level agreements outlining key performance indicators against which its outsourced service providers can be monitored and assessed.

The Company does not consider that it is exposed to material residual risk in this area due to the formality that has been created around the Company's processes and procedures, including those for financial and regulatory reporting. There is no specific risk concentration associated with this category, as internal controls include appropriate segregation of duties.

There were no material changes to the measures used to assess the operational risk exposure or the material risks over the reporting period.

C.6 Other material risks

Strategic Risk

Strategic risk is the risk of loss arising from adverse business decisions, improper implementation of decisions, or lack of responsiveness to industry changes, i.e., the risk associated with implementing the wrong strategy or failing to correctly implement the chosen strategy.

The control and monitoring actions/principles underlying the strategic risk management of the Company are:

- Review at least annually of the appropriateness of the high-level overall objectives for the Company, the major risks facing the Company, the Risk Appetite for each of these major risks identified. The Board of Directors will ensure continuing appropriateness, at least annually and revisions shall be affected where necessary.
- Ensure the Company strategy is implemented correctly including approval, review and, monitoring of agreed Key Performance Indicators for the Company.
- Ensure all plans are regularly reviewed to ensure that Risk Tolerances are not exceeded individually or in total.

Sensitivity Risk

The Actuarial Function assesses annually the sensitivity of its estimate of the Company's unpaid claim liabilities of varying the key assumptions underlying its analysis. Given the nature of the Company's exposures, the key assumptions underlying the actuarial analysis are subject to a range of reasonable interpretations.

No other material risks have been identified.

C.7 Any other information

There are no other material items to report in this section.

D. VALUATION FOR SOLVENCY PURPOSES

D.1 Assets

adidas International Re prepares its financial statements on a going concern basis in accordance with Irish GAAP (accounting standards issued by the Financial Reporting Council of the UK and promulgated by the Institute of Chartered Accountants in Ireland and the Companies Act 2014). The entity financial statements comply with Financial Reporting Standard 102, the financial reporting standards applicable in the UK and Republic of Ireland (FRS 102) and Financial Reporting Standard 103 Insurance Contracts (FRS 103), and the Companies Act 2014. There are several differences between the financial statement basis and the Solvency II valuation rules. Most of these differences are driven by the requirement for all assets and liabilities to be valued on a market consistent fair value basis under Solvency II.

At the end of the current reporting period adidas International Re has total assets valued at €70m (2022: €71m) for solvency purposes. This total comprises the following categories of assets:

ASSETS (€)	Solvency II	Financial Statements	Difference
Other loans and mortgages (1)	59,307,043	59,295,411	11,632
Cash and cash equivalents (2)	5,161,968	5,161,968	0
Investment funds (3)	10,170,353	10,170,353	0
Accrued interest (1)	-	11,632	(11,632)
Insurance and intermediaries receivables (4)	-	5,115,701	(5,115,701)
Reinsurers share of technical provisions (5)	(4,750,000)	0	(4,750,000)
Receivables (trade, not insurance) (3)	276,984	276,984	0
Deferred acquisition costs (6)	0	72,000	(72,000)
Any other assets (3)	748	748	0
Total Assets	70,167,096	80,104,797	(9,937,701)

(1) Intercompany loans are stated at market value for both solvency and financial statement purposes, the only difference being the inclusion of accrued interest in the above balances on the Solvency II balance sheet. There are no valuation adjustments to funds withheld by cedants for solvency purposes.

(2) Cash and cash equivalents comprise cash at banks. Carrying amounts approximate fair value due to the liquid nature of the assets.

(3) There are no valuation adjustments for solvency purposes.

(4) Insurance and intermediary receivables comprise premium receivable from the cedants net of fronting costs. These future cash flows are treated as part of the calculation of technical provisions (Section D2 below).

(5) Reinsurers share of technical provisions is dealt with under Section D2 below.

Information on how the Company invests its assets and manages risk in this area, including how it achieves compliance with the 'prudent person principle', is set out in Sections C2 – C4 above. Operational risks relating to the Company's assets are managed according to the control framework described in Section B4 above.

(6) Deferred acquisition costs relate to those cedant fronting fees that are deferred over the remaining

policy period as at 31 December 2023. Such costs are treated as part of the calculation of technical provisions (Section D2 below).

D.2 Technical Provisions

Provision is made for notified losses on all underwriting years. Provisions are calculated gross of any reinsurance recoveries, with a separate estimate being made of amounts recoverable from reinsurers. The Company has regard to the gross and net loss positions as indicated by the claim circumstances reported to date, and loss projections carried out under the direction of the Head of Actuarial Function using actuarial techniques.

Reserves for reinsurance contract liabilities and reinsurance assets are based upon management's best estimate of the ultimate liabilities and are determined with the assistance of, and based on, the results of the analysis performed by the Actuarial Function. The reserves include estimates for both case reserves and losses incurred but not reported (IBNR).

The Solvency II Technical Provision is comprised of a Best Estimate of Liabilities (BEL) and a Risk Margin (RM). A reconciliation of the technical provisions in the financial statements to the technical provisions in the Solvency II balance sheet has been included below:

(€'000)	
Booked Local GAAP Claims Reserves	43,458
Removal of margin	(4,342)
Undiscounted best estimate claims	39,116
Expenses	774
Events Not In Data	1,101
Premium debtors not overdue	(1,905)
Discounting	(1,715)
Solvency II Claims Provision	37,372
Booked Unearned Premium Reserves	(1,728)
Gross undiscounted losses on unexpired risk	36,351
Premium receivables	(46,379)
Bound But Not Incepted (BBNI) expenses	5,664
Expenses	720
Events Not In Data	1,064
Discounting	(1,774)
Solvency II Premium Provision	(6,082)
Gross Solvency II Best Estimate	31,289
Reinsurer's share of Claims Provision	-
Reinsurer's share of Premium Provision	(4,750)
Allowance for Reinsurer default	-
Discounting	-
Ceded Solvency II Best Estimate	(4,750)
Net Solvency II Best Estimate	36,039
Risk Margin	1,354
Solvency II Technical Provisions	37,393

The Solvency II Technical Provisions by line of business are noted below:

(€'000) LOB	SII BE Claim Provision (Undiscounted)		SII BE Premium Provision (Undiscounted)		SII BE Total (Discounted)	Risk Margin	SII Technical Provisions
	Gross	Net	Gross	Net			
Fire & Other Damage to Property	3,893	3,893	(1,830)	(1,236)	2,309	113	2,422
General Liability	4,092	4,092	212	288	3,982	232	4,214
Marine, aviation & transport	9,208	9,208	(1,000)	(367)	8,282	251	8,533
Miscellaneous Financial Loss	636	636	(814)	(680)	(89)	2	(88)
Medical expense insurance	21,258	21,258	(878)	2,435	21,555	757	22,312
Total	39,087	39,087	(4,309)	441	36,039	1,354	37,393

The methodology used to calculate each of these elements of the technical provisions is discussed below.

Best Estimate Liability (BEL)

The BEL is the expected present value of the probability-weighted average of future cash-flows, using the relevant risk-free interest rate term structure.

Included within the BEL are the cashflows related to the IBNR and Claims reserves, as well as the cashflows in relation to the unearned and future premiums.

The RM is the cost of holding the SCR over the lifetime of the obligations. The Cost-of-Capital rate referred to in Article 77(5) of Directive 2009/138/EC shall be assumed to be equal to 6% (2022: 6%) (above risk free). The RM is calculated using a risk driver approach to project future capital requirements. Technical provisions are calculated gross of amounts recoverable from reinsurance contracts.

The key cashflows underlying adidas International Re's business, and therefore the BEL calculation, are:

- Premiums
- Friction Costs (relating to acquisition costs, including cedent's commission)
- Claims
- Future Expenses

All future cash flows need to be taken into account. There may be a number of possible cash flows stemming from events which have not yet been observed, and so are not included in the data used to calculate the technical provisions. These events not in data (ENIDs) need to be allowed for explicitly. Cash flows should not take investment returns into account, as the time value of money is included at the risk-free rate. Further, assumptions must be made for any future management actions of the company including any decisions with regard to, for example, risk mitigation techniques.

Premiums

Under Solvency II, technical provisions are calculated on a discounted cash flow basis so unpaid premium cash flows are included within the valuation, subject to contract boundaries and contractual obligations. This is because the technical provision should include all cash flows associated with claims. Premiums are allocated to the claim provision or premium provision, based on the exposure

period to which they relate. Premiums are only included within the technical provisions if they are within credit terms. If they are outside of credit terms (overdue) they should be considered as a debtor or creditor within the Solvency II balance sheet. In the Company's case, all debtors are treated within the premium provision, as they are considered not overdue. Under Solvency II's contract recognition basis, all premiums from the bound but non-incepted exposure are included in the technical provisions.

Claims

The BE of provisions for claims outstanding ("claims provisions") is the expected present value of all future claims payments and expenses arising from claims events that have occurred prior to or at the valuation date, including all incurred but not enough reserved ("IBNER") and incurred but not yet reported ("IBNYR") or incurred but not emerged ("IBNE") claims. This should also include all unpaid premium relating to earned exposures, which are within payment terms.

Claims payments are projected at annual intervals using the annual claims payment pattern derived from the historical claims data provided. The payments have subsequently been discounted to the valuation date using the relevant EIOPA risk-free rate curve at 31 December 2023, assuming future payments are made mid-year.

Expenses

The BE takes account of all cash flows arising from expenses (both allocated and overheads) that will be incurred in servicing existing reinsurance obligations during their lifetime. They are projected on an on-going business basis; that is, assuming that new business will be written in future. In addition, allowance is made for future inflation, consistent with the economic assumptions made elsewhere.

Expenses which cannot be directly allocated to claims are allocated to lines of business using realistic assumptions. In addition, expenses are allocated to claims provisions and premium provisions as appropriate.

Reinsurance Recoverable

As the gross technical provisions are calculated by underwriting year, the retrocession agreements relevant to all years were applied by the actuaries to all years to determine the reinsurance recoverable. Due to the relative simplicity of both inwards and outward programmes, this method is considered the most reliable and adequate.

Risk Margin

The risk margin covers the discounted cost of capital that would be needed to support the full run-off of the liabilities and is intended to represent the 'market premium' that would need to be paid to transfer the portfolio of liabilities to another party. It is determined using a cost-of-capital approach, where the cost-of-capital rate is the annual rate to be applied to the SCR in each period necessary to support the obligations over their lifetime.

For this exercise, the second simplification provided in TP 5.32 from technical specifications (EIOPA-14/209) published by the EIOPA is used.

Main Assumptions

There have been no material changes in the relevant assumptions made in the calculation of the technical provisions compared to the previous reporting period.

The methods used rely on several assumptions. Amongst these, every method relies, at least to some extent, on the assumption that patterns observed in the past will be repeated in the future. In adopting these methods, the actuaries are assuming that the extent of departure from these assumptions will not have a material effect on their estimates.

The Company records information a quarter in arrears. Claims data is utilised up to September 2023 with any large loss anomalies to be reported ad hoc, of which there were none.

Areas of uncertainty

- Estimates are “best estimates” in the sense that they represent the average of all possible outcomes.
- The actual amounts required to meet future claim payments may differ, even significantly, from our estimates. This estimation error can arise for several reasons, such as model specification error, parameter error and random error.

The Actuaries have employed techniques and assumptions that are appropriate for the purpose of this exercise, given the information currently available. However, future claims emergence may deviate, perhaps materially, from estimates. Models are simplified, cut down versions of reality which capture key features of the problem. Whilst aiding understanding this simplification adds uncertainty. Further uncertainty is created in using professional judgement; experienced professionals can quite reasonably look at the same facts and draw differing conclusions. Additionally, models are based on past experience, which is subject to random variation, as well as the inherent random variation in the insurance process. Where possible, an indication of the uncertainty has been provided in the estimates.

In calculating its technical provisions on a Solvency II basis, adidas International Re has not applied any of the following items:

- matching adjustment referred to in Article 77b of Directive 2009/138/EC;
- volatility adjustment referred to in Article 77d of Directive 2009/138/EC;
- transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC; and
- transitional deduction referred to in Article 308d of Directive 2009/138/EC.

D.3 Other liabilities

Aside from technical provisions, the valuation of which is detailed above in Section D2, adidas International Re has three other principal classes of liabilities:

(€'000)	Solvency II	Financial Statements	Difference
OTHER LIABILITIES			
Deferred tax liabilities	335	-	335
Insurance & intermediaries payables	-	-	-
Other liabilities	190	190	-
Total Liabilities	525	190	335

Deferred tax of €335k (2022: €755k) arises due to the valuation difference on the technical provisions and debtors between the Financial Statements Balance Sheet and the Solvency II Balance Sheet, multiplied by the applicable tax rate (12.5%). There is no deferred tax liability in the financial statements.

There is no difference between the valuation of the remaining liabilities for Solvency II purposes compared to Irish GAAP measurement principles which are deemed to approximate fair value. The only difference being the inclusion of negative accrued interest in the above balances on the Solvency II balance sheet.

D.4 Alternative methods for valuation

No alternative methods were used.

D.5 Any other information

No other information to report.

E. CAPITAL MANAGEMENT

E.1 Own funds

The Company has put in place a Capital Management policy to ensure that 'Own Fund' items, both at issue and subsequently, meet the requirements of the Solvency II capital regime. The objectives of the policy are to ensure that on an on-going basis the Company has:

- own fund items available to meet its capital requirements; and
- developed processes to ensure the appropriateness of its own fund items.

On an annual basis, the Company reviews the level, composition, and classification of own fund items to ensure they continue to meet its own solvency needs, and its regulatory obligations in respect of Solvency Capital Requirement ('SCR') and Minimum Capital Requirement ('MCR'). A 3-year forward-looking time horizon is used for business planning purposes and any anticipated changes to the Company's business and risk profile are factored into the ORSA process to assess the solvency and capital needs over the business planning period. It is intended that the Company's capital needs will be managed out of its existing pool of own funds and the efficient management of the Company's insurance business. Should additional funds be required outside of that, they will be advanced by the shareholder. There have been no material changes to this approach from the prior year.

The Company's own funds consist of the following items:

- Issued Share Capital; and
- Retained Earnings.

Any change to the share capital requires the approval of the Shareholder and the Board. Retained earnings are adjusted on a quarterly basis to take account of the profits/losses earned in the period together with any Solvency II valuation adjustments.

The payment of dividends is considered on an annual basis by the Board as part of its medium-term capital assessment. Potential dividends will be considered as part of the Company's ORSA process to ensure that the Company will continue to meet its solvency needs over the business planning period.

Any other qualifying own fund item requires the review and approval of the Board. In such instances, the Board must ensure that the terms and conditions of any own fund item are clear and unambiguous in relation to the capital classification.

The movement in basic own funds during the reporting period reflects increase in the reconciliation reserve realised by the Company due to more favourable claims performance in the period as adjusted for the valuation of net technical provisions on a market consistent fair value basis under Solvency II.

Own fund items at the end of reporting period and the prior year comparative period are as follows:

(€'000)	2023	2022
Shareholders' equity		
Ordinary paid-up share capital	635	635
Reconciliation reserve	36,364	37,071
Deferred tax assets	0	86
Total basic own funds	36,999	37,792

The movement in basic own funds reflects the decrease in the reconciliation reserve recorded in the reporting period. The reconciliation reserve represents the Company's retained profits as adjusted for Solvency II valuation principals. The adjustments which arise in the application of these principles are shown in the equity reconciliation below.

At the end of the current reporting period, eligible own funds available to meet the Company's SCR and MCR is €37.0 (2022: €37.8m), comprised solely of Tier 1 capital.

The equity position as shown in the Company's 2023 year-end financial statements can be reconciled to the basic own funds balance under Solvency II as follows:

€'000	2023
Equity per the Company's financial statements	34,657
Adjustments to technical provisions	12,614
Removal of reinsurance debtors and deferred acquisition costs	(9,937)
Deferred tax liability	(335)
Own funds (excess of assets over liabilities for solvency purposes)	36,999

Adjustments are made to technical provisions in line with the valuation methodologies set out in section D.2 above. This results in the removal of reinsurance debtor and deferred acquisition cost balances as the future cash flows in relation to these items are dealt with as part of the calculation of technical provisions. Deferred tax is provided on these adjustments at the applicable tax rate. These adjustments are reflected in the Company's reconciliation reserve.

The Company's own funds are not subject to transitional arrangements and the Company has no ancillary own funds. No deductions are applied to own funds and there are no material restrictions affecting their availability and transferability.

E.2 Solvency capital requirement and minimum capital requirement

At the end of the current reporting period, adidas International Re's SCR and MCR have been calculated as €15.7m (2022: 14.9m) and €5.4 (2022: €4.3m) respectively.

The SCR is intended to correspond to the capital the Company needs to hold in order to limit the probability of ruin, in the following 12 months, to 0.5%, i.e., ruin would occur less than once in every 200 years. The SCR calculated at the end of the current reporting period, relates to the capital required to support the business over the prospective 12 months; covering both existing liabilities and business written during 2023. Based on the Company's eligible own funds of €37.0m (2022: €37.8m), the Company has a solvency ratio at 31 December 2023 of 235% (2022: 253%).

The SCR has been calculated using the standard formula and without the application of any undertaking specific parameters.

The split of SCR by risk modules is shown below, together with the prior year comparative:

€'000	31-Dec-23	31-Dec-22	Variance
Market risk	8,763	8,825	(62)
Interest rate	1,698	1,891	(193)
Spread	923	852	71
Concentration	8,455	8,483	(28)
Counterparty Default risk	434	564	(130)
Health risk	6,281	5,404	877
Premium/Reserve	5,784	4,560	1,224
Lapse	-	-	-
CAT	1,399	1,977	(577)
Non-life risk	6,215	6,569	(354)
Premium/Reserve	6,136	6,416	(280)
Lapse	985	1,408	(423)
BSCR	14,689	14,529	160
Adj.	(335)	(755)	420
Op. risk	1,369	1,152	217
SCR	15,723	14,926	797
MCR	5,444	4,388	1,056
Eligible Capital	36,999	37,792	(793)
Solvency Ratio	235%	253%	(18%)

Some of the key drivers of the capital requirement for adidas International Re are:

- **Health underwriting risk**

There has been an increase in health underwriting risk of €877k. This is primarily due to the combination of higher loss reserves and an increase in earned premium which drive an increase in the premium and reserve risk.

This is partially offset by:

- **Non-life underwriting risk**

A decrease of €354k in non-life underwriting risk mainly driven by the decrease in lapse risk and premium and reserve risk. Both reductions are mainly due to reduced future premium for Supplier Failure, with two years remaining in the three year policy.

The MCR for adidas International Re is calculated in accordance with the standard formula. Setting the MCR involves these steps:

- Firstly, a factor-based calculation is applied using premiums and reserves as the drivers.
- The value of this calculation is either capped or floored such that the value of the MCR is between 25% and 45% of the value of the SCR.
- Finally, the Absolute Minimum Capital Requirement ('AMCR') is applied. This is a monetary floor on the value of the MCR. For reinsurance captives this is currently set at €1.3m (2022: €1.3m),
- adidas International Re's calculated MCR of €5.4m is higher than the AMCR,

E.3 Use of duration-based equity risk sub module in calculation of the solvency capital requirement

There was no use of duration-based equity risk sub module in the calculation of the SCR.

E.4 Differences between the standard formula and any internal model used

adidas International Re used the standard formula in determining its SCR and MCR and did not rely on any internal model.

E.5 Non-Compliance with the Minimum Capital Requirement and the Solvency Capital Requirement

There are no instances of non-compliance with the MCR and SCR.

E.6 Any Other Information

There is no other information to report.

E.7 Additional Voluntary Information

There is no additional voluntary information to report.

<i>Note: Tables within this report contain minor rounding differences in certain instances due to amounts being displayed as whole numbers or in thousands while the source workings underlying the annual reporting templates are calculated to two decimal places. These differences are immaterial.</i>
