ANNEX I – QUANTITATIVE REPORTING TEMPLATES	30

SUMMARY

This Report refers to the business of Wagram Insurance Company DAC ('Wagram', 'the Company'), a captive insurer, authorised and supervised by the Central Bank of Ireland. It provides the reader with information on the Company's business and performance, system of governance, risk profile, valuation for solvency purposes and capital management for the reporting period ended 31 December 2024.

Wagram has prepared this report in accordance with the relevant articles of the Commission Delegated Regulation (EU) 2015/35, together with the Guidelines on reporting and public disclosure issued by EIOPA.

The Company's financial statements are prepared to 31 December 2024 and it reports its results in Euro.

The Company's business strategy is to provide insurance coverage to EDF group entities which are primarily domiciled in the European Union. The impact of insurance risk volatility on the Company's capital base is mitigated through the purchase of reinsurance from appropriate counterparties. Investment of Company funds is in line with the documented investment strategy, reflecting a 'prudent person' approach to the management of counterparty, concentration, interest rate and currency risk.

The Board has identified the key risks to which Wagram is exposed and established appropriate corporate governance, risk management and reporting mechanisms to ensure that the identified risks remain relevant, and that they are managed and reported on with appropriate levels of detail and frequency. The Company has established a comprehensive suite of risk policies and implemented a series of internal controls to ensure that Wagram can be managed in accordance with its governance and risk management systems. Documented escalation mechanisms are in place to ensure that any breaches in risk limits and tolerances, internal controls and governance requirements can be reported promptly to the appropriate individuals.

Risks to which the Company is exposed are well understood and are used to determine the level of solvency and capital required over a forward-looking three-year business planning period. The results of this exercise are used to better inform decision making within the Company.

The Company has signed up to the United Nations Principles for Sustainable Insurance (UN PSI) and established an action plan in relation to Climate Change and ESG, which is reviewed regularly by the Board and updated as required.

There were no material changes to Wagram's business and performance, system of governance, risk profile, valuation for solvency purposes and capital management over the reporting period.

As at 31 December 2024, the Company had eligible own funds of EUR 119,254,878 available to meet its Solvency Capital Requirement ('SCR') of EUR 50,077,392, resulting in a Solvency Ratio of 238%, which is in compliance with the regulatory solvency requirements per the Solvency II regulations. The Board of Directors is satisfied that the Company has adequate and appropriate capital to support its business plans. The Minimum Capital Requirement ('MCR') was also satisfactorily met at the period-end. There were no instances of non-compliance with the capital requirements during the period.

A. BUSINESS & PERFORMANCE

A.1 Business

Wagram Insurance Company DAC is incorporated in Ireland. Wagram is a captive insurance undertaking, underwriting only the risks of its parent group. The principal activity of the Company is the provision of insurance for Property Damage & Business Interruption, General Liability, Nuclear Third-Party Liability, Marine Transit, Construction All Risks, Cyber and Judicial Recourse cover to certain companies within the Electricité de France S.A group ('EDF').

The Company's business address and registered office is 9 Clanwilliam Terrace, Dublin 2, D02 H266, Ireland.

Wagram is authorised by the Central Bank of Ireland ('CBI'), under the European Union (Insurance and Reinsurance) Regulations 2015 (SI 485), to carry out the business of non-life insurance. The insurance supervision division at the CBI may be contacted at their offices in New Wapping Street, North Wall Quay, Dublin 1, Ireland.

Authorisation is in respect of the following classes:

- Class 7 – Goods in Transit
- Class 8 – Fire and Natural Forces
- Class 9 – Other damage to Property
- Class 10 – Motor Vehicle Liability
- Class 13 – General Liability
- Class 14 – Credit
- Class 16 – Miscellaneous Financial Loss

PwC Ireland is the appointed external auditor of the Company and is located at One Spencer Dock, N Wall Quay, North Wall, Dublin 1, Ireland.

The Company's immediate parent undertaking (100% ownership) is Société C3 which is incorporated in France. The Company purchases a portion of its reinsurance protection from Océane Re, domiciled in Luxembourg, which is also a wholly owned subsidiary of Société C3. The ultimate parent undertaking is Electricité de France S.A., incorporated in France. The Company has no related branches. A summary of the Company's ownership structure is outlined below:

Details on other Group subsidiaries and related undertakings are published within EDF's latest Annual Report and Financial Statements which are available to download at <https://www.edf.fr/en/the-edf-group/dedicated-sections/investors-shareholders/financial-and-extra-financial-performance/financial-results>

Wagram Insurance Company DAC

The majority (>95%) of business written by the captive relates to direct insurance of EDF's European operations. Rest-of-world risks are written through fronting insurers with the risk being ceded to Wagram. As a result, the principle of economic substance over legal form has been applied and these risks have been considered as direct insurance for the purposes of Solvency II.

The Company's insurance exposure is mitigated by setting limits of liability within its insurance programme and the purchase of reinsurance from a panel of highly rated reinsurers, terrorism pools, and from Océane Re, a fellow EDF subsidiary, incorporated and authorised as a reinsurance captive in Luxembourg.

The operation of the Company is subject to the local regulatory requirements in Ireland. Such regulations not only prescribe approval and monitoring of activities but also impose certain restrictive provisions, for example capital adequacy to minimise the risk of default and insolvency on the part of the Company to meet unforeseen liabilities as they arise.

Wagram conducts all of its significant business activities from its offices in Ireland with the support of its General Manager, Claims Manager, Insurance Manager and Chief Financial Officer, including:

- underwriting;
- premium invoicing and collection;
- claims reserving and payments; and
- investing.

There have been no significant events during the reporting period which have had a material impact on the Company, other than a continuing high level of claims incurred which is described in more detail in section A.2 below.

A.2 Underwriting Performance

Wagram's business is the provision of (re)insurance in a manner which enhances the risk management, economic and administrative efficiency of Electricité de France S.A. Insurance is provided under four lines of business:

- Marine, aviation and transport
- Fire and other damage to property
- General liability
- Miscellaneous Financial Loss

The Company's underwriting performance for these lines of business for the reporting period ended 31 December 2024 and the comparative period is set out below. Amounts are presented in Euro ('EUR'), which is the Company's functional currency:

	2024 EUR	2023 EUR
Gross Premiums Written	113,534,979	84,722,576
Reinsurers' Share	(57,521,296)	(50,397,787)
Net Premiums Written	56,013,683	34,324,789
Net Premiums Earned	57,561,705	42,912,017
Net Claims Paid	(20,643,356)	(38,150,079)
Net Change in Provision for Claims	(19,489,468)	6,700,880
Net Operating Expenses	(5,099,632)	(4,721,927)
Underwriting Result	12,329,249	6,740,891

The Underwriting Result is significantly higher than the prior year, with an overall increase of EUR 5.6m. This is attributable to a significant increase in net earned premium, which more than offsets the increased claims cost and operating expenses. The net claims incurred is EUR 8.6m higher than the prior year due to adverse development on the prior underwriting year as well as high claims in the current year. A summary of the movement for net incurred claims is shown below. Additionally, a full split of the 2024 underwriting result is shown in the following Quantitative Reporting Templates appended to this report; S05.01.02 – Premiums, Claims and Expenses, and S.05.02.01 – Premiums, Claims and Expenses by Country.

Over 95% of the gross premium written relates to EDF entities within Europe. From a claims perspective, while there was a net reduction on 2021 and 2022 underwriting years, property claims for the 2023 year exhibited a significant deterioration on a gross basis and the 2024 year showed similarly high gross numbers. Both of these years breached the aggregate, thereby involving reinsurers but capping the Company's net exposure.

Premiums written relate to business incepted during 2024. The increase in premium written relates primarily to an increase in property premium written, some liability renewals and construction policies for renewable energy projects. There is a commensurate change to the gross premiums earned during the period. The gross earned premiums are split by line of business below:

	2024 EUR	2023 EUR
Fire and other damage to property insurance	95,381,565	84,037,998
General Liability Insurance	63,105,042	61,001,182
Marine, aviation and transport insurance	588,781	558,000
Miscellaneous Financial Loss	0	65,502

The net claims incurred by line of business is set out below:

2024 EUR	Fire and other damage to property insurance	General Liability Insurance	Marine, aviation and transport insurance	Miscellaneous Financial Loss
Net Claims Paid	(19,726,789)	(439,433)	(477,134)	0
Net Change in Provision for Claims	(21,221,104)	2,396,058	(664,422)	0
Net Incurred Claims	(40,947,893)	1,956,625	(1,141,556)	0

2023 EUR	Fire and other damage to property insurance	General Liability Insurance	Marine, aviation and transport insurance	Miscellaneous Financial Loss
Net Claims Paid	(38,067,343)	0	(82,736)	0
Net Change in Provision for Claims	9,811,354	(2,680,898)	(337,776)	(91,800)
Net Incurred Claims	(28,255,989)	(2,680,898)	(420,512)	(91,800)

Net claims paid in the period are lower than the prior year as no large claims were settled in the period. The significant increase in net claims incurred is primarily due to higher incurred claims in relation to the Property Damage losses in 2024. There was a release of reserves in relation to historical general liability claims related to French government subsidies for photovoltaic installations in 2010 and 2011.

Premium pricing is re-assessed annually, taking into account the underlying risks to be insured, historical claims performance, the pricing of reinsurance in the market and the relevant costs associated with the administration of the programme.

A.3 Investment Performance

Following a change in the Company's documented investment policy, an investment manager was appointed in May 2021 to manage a portfolio of investments, primarily government and corporate bonds, which replaced many of the existing Money Market Funds and bank deposits. Income arising from investment activities for the reporting period was EUR 2,024k (2023: EUR 1,818k). In addition there was an unrealised investment gain of EUR 5,723k on the revaluation of the investments (2023: 5,003k).

The Company has no direct investments in securitised asset classes and all investment income is recognised in the Company's income statement.

A.4 Performance of other activities

Wagram does not engage in any activities other than those associated with captive insurance and has not entered into any leasing agreements other than the lease of the premises from which it operates.

A.5 Any other information

The Company recorded a foreign exchange gain of EUR 1,766 during the reporting period (2023: foreign exchange loss of EUR 129,250) due primarily to holding US Dollar assets for the payment of US Dollar denominated reinsurance premiums.

Nothing has occurred since the balance sheet date that would have a material impact on the results outlined in these financial statements or on the Company's SCR.

B. SYSTEM OF GOVERNANCE

B.1 General information on the system of governance

In order to meet the requirements for sound corporate governance, ensure efficient conduct of business and protect the interests of the Company's stakeholders, the Company has a comprehensive Governance and Risk Management system in place. This Governance and Risk Management framework ensures the strategic guidance of the Company is clearly described, allows for effective monitoring of management by the Board and sets out the Boards accountability to key stakeholders.

The Board of the Company acknowledges its responsibility to ensure that risks are fully understood and appropriately managed and has taken appropriate steps to ensure that risk management, reporting and control processes have been put in place in a manner which reflects the nature and scale of the captive's activities. The Board is the focal point of the governance system and is ultimately accountable and responsible for the performance and conduct of the Company. The Company employs a General Manager, Claims Manager, Insurance Manager and Chief Financial Officer to assist the Board in its duties.

The Governance and Risk Management System of the Company may be described as relying on four cornerstones:

- 1) Governance Framework, aligned with the Company's strategic objectives, providing top level oversight by the Board, clear ownership and accountability for risks, as well as clear escalation and reporting channels.
- 2) Risk Management Framework which details the Company's strategic objectives in documented Risk Policies. For each risk, limits and operational checkpoints as well as functional identification, mitigation and monitoring processes are documented.
- 3) A series of Internal Controls, defining the architecture of processes required to manage the Company in accordance with its governance and risk management frameworks.
- 4) A Risk Register combining operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's global strategy objectives.

The Board annually reviews the governance framework, the risk appetite framework setting out tolerance limits and operational limits for all risk categories, the risk management policies for all risk categories and the risk register for the Company. There have been no material changes to this structure in the period.

In order to achieve the Company's objectives, the Board has established a system of governance with the following core components:

- the Board of Directors is the focal point of the governance system and is ultimately accountable and responsible for the performance and conduct of the Company and, as such, must have at its disposal all required capabilities to achieve its duties;
- all authority emanates from the Board of Directors and responsibilities are delegated in such a manner as to ensure that no one individual has unfettered powers of decision;
- an embedded Compliance Function aiming to ensure the continuous compliance of the Company with all applicable legal, regulatory and administrative requirements;
- an appropriate segregation of duties in order to enable the Risk Management, Internal Audit, Actuarial and Compliance Function to perform independent risk and business control mitigation, monitoring and reporting tasks;
- a meaningful and practical approach in documenting policies and strategies to formalise all processes in an efficient and fit-for-purpose manner; and
- structured reporting processes to enable an appropriate escalation of risks and issues to the Board of Directors in order to ensure a clear and comprehensive information process allowing the Board to conduct business in an efficient and prudent manner in line with the strategic objectives.

According to these principles, the chosen governance model is one of "three lines of defence" which is illustrated as follows:

The Board undertake responsibility for performing the equivalent function of an Audit Committee in relation to the reporting period ended 31 December 2024.

The Board members have:

- The necessary knowledge, skills, experience, expertise, competencies, professionalism, fitness, probity and integrity to carry out their duties;
- A full understanding of the nature of the Company's business, material activities and related risks;
- A full understanding of their individual direct and indirect responsibilities and collective responsibilities; and
- An understanding of the Company's financial statements and key performance drivers.

The Board comprises the following senior personnel who have been selected to ensure that the Company is being run by individuals of appropriate expertise and integrity and who meet the criteria set out above:

- Brice Alleman
- Stéphane Yvon
- Pascal Martinetto
- Tanguy Gaidoni
- Caitríona Somers
- Michael Spellman

There have been no material changes in the system of governance since the prior reporting period. Having reviewed the risks facing the Company thoroughly, the Board is satisfied that the system of governance in place is adequate.

Key Functions

The key functions of Risk Management, Internal Audit, Actuarial, Compliance and Operations have clear and defined lines of reporting directly to the Board. This is facilitated by the straightforward nature of the Company's structure and fit-for-purpose documented policies and procedures which are clearly communicated and well understood by all relevant parties. The Board has ensured that the key functions are appropriately resourced and have the necessary authority and operational independence to perform their roles. Management of the Company is effected through its General Manager supported by the Claims Manager, Insurance Manager and CFO. The key functions of Actuarial, Internal Audit and Compliance are outsourced to service providers with appropriate expertise in line with the Company's outsourcing policy.

Remuneration and material transactions

With the exception of the Independent Non-Executive Director ('INED'), members of the Board of Directors receive no remuneration for their services as directors to the Company.

As a captive insurer, all inward premium flows and claims payments relate to insured risks of the shareholder group. In addition, the Company purchases reinsurance from a fellow subsidiary. Other than these transactions which arise in the normal course of business, the Company had no material transactions during the reporting period with members of the shareholder group and none with members of the Board of Directors.

B.2 Fit and proper requirements

Wagram has documented its Fitness & Probity policy setting out the Company's approach to the selection and assessment of the persons who effectively run the Company or are responsible for other key functions.

In selecting individuals as directors or function holders, the Company takes account of the following factors:

- specific requirements of the role
- the skills, experience and relevant qualifications of the proposed individual
- results of due diligence enquiries
- conflicts of interest
- time requirements and other commitments
- competence and integrity
- financial soundness

Consideration is given to ensuring an appropriate mix of knowledge, skills, diversity and experience across the Board of Directors and for those roles where specialist skills are required e.g. Head of

Actuarial Function, only those individuals possessing the pertinent qualifications and expertise will be considered.

For those roles which are prescribed by the CBI as Controlled Functions (CFs) and Pre-approval Controlled Functions (PCFs), the Company adopts appropriate control and due diligence processes in the selection and vetting of such individuals to ensure that they meet the regulator's fit and proper criteria. Written approval from the CBI is obtained prior to the appointment of PCFs. Appointed individuals are required to maintain on-going compliance with the Standards of Fitness & Probity and the guidance issued by the CBI.

Wagram is satisfied that appointed individuals performing controlled functions meet all relevant regulatory requirements and have a suitable level of training and qualification in order to enable them to carry out their respective duties. This is assessed by the Company on an annual basis.

B.3 Risk Management System including the Own Risk and Solvency Assessment

The Company has taken appropriate actions in order to:

- embed risk management as a key function within its governance structure; and
- develop and maintain effective processes and reporting procedures to identify, measure, monitor, manage and report, on a continuous basis, the risks to which the Company is exposed.

Risk refers to the effect of uncertainty on the Company's ability to meet its objectives. Risk management is a systematic approach to protect the business resources and income against losses and unexpected events so that objectives of the Company can be achieved without unnecessary disruption.

The Company's Risk Management System:

- sets out the level of risk acceptable by the Company (Risk Appetite and risk tolerance);
- identifies the risks which represent a threat to the achievement of its strategic objectives;
- identifies, defines and regularly measures key risk indicators enabling an efficient monitoring of risks;
- defines the appropriate actions to reduce the Company's risk exposure;
- ensures the risk management framework is implemented in day-to-day business processes; and
- regularly reviews controls and mitigation actions to ensure that they remain relevant and effective.

In order to achieve these objectives, the Risk Management System of the Company has been clearly documented and specified through specific risk management policies for each key risk category. The key risk categories for which the Company has set up specific control and monitoring mechanisms are:

- Underwriting/Reserving
- Asset Liability Management ("ALM")
- Investment
- Liquidity and concentration
- Operational
- Reinsurance and other risk mitigation techniques
- Strategic

In addition to these, an outsourcing policy defining the key rules and criteria to be followed by each service provider has been determined.

Own Risk and Solvency Assessment

The Company performs an Own Risk and Solvency Assessment ('ORSA') process annually in order to provide its Board of Directors with a forward-looking risk and capital assessment. The adequacy of the available capital, the Risk Appetite Framework and the appropriateness of the risk limits is assessed for the business planning period, considering the evolving risk profile. To this end, risks and scenarios to which the Company is exposed during the business planning period and which may affect the capacity to meet its insurance obligations or pose a threat to the achievement of its business objectives are taken into account.

Stress testing and scenario analysis are used to assess whether the available and future capital are sufficient in both expected and stressed situations. Four year business projections, stresses and scenarios are compiled by the Operations Functions with input and agreement from the General Manager, the Board of Directors and the Head of Actuarial Function to ensure that these are appropriate for the Company.

Capital and solvency projections are conducted by the Actuarial Function, reviewed by the General Manager and CFO and validated by the Risk Management Function. Where applicable, any future additional capital needs will be identified and aligned to the Company's capital management plan i.e. defining the measures to restore the Company's solvency margin should the assumed scenarios occur.

In line with CBI requirements, the Head of Actuarial Function provides an actuarial opinion to the Board of Directors in respect of the ORSA and the results of the ORSA process are presented to the Board for review and challenge. Following feedback and approval from the Board, the Company's ORSA report is finalised and results submitted to the CBI within 2 weeks.

The ORSA report provides clarity over projected risk assessments and solvency needs to three different stakeholders:

Stakeholder	Expectation	ORSA Report
Board of Directors	Matching projected risks vs the Risk Appetite framework.	Provides a clear and prospective understanding of critical risk exposures and their relationship with Risk Appetite boundaries.
Shareholders	Detailed and prospective understanding about the risk of insolvency and potential need for future additional capital.	Provides a plan for capital needs on the time horizon of the financial planning.
Supervisory Authority	Detailed and prospective understanding of potential ORSA deviations compared to solvency capital requirements	Gathers information about projected Solvency ratios: - explanations about deviations due to specific critical risk exposures.

The ORSA process described above ensures that the ORSA is integrated in the Company's decision-making and business planning process. Furthermore, monitoring procedures as set out in the risk management policies ensure that risk exposures are measured on a regular basis which could trigger exception reports to the Board.

The capital risk appetite for Wagram is to sustain its capital at a level sufficient to meet the Regulatory Solvency Capital Requirement at all times. The Board of Directors maintains a prudent approach to capital to ensure that Wagram is in a comfortable position to meet this obligation.

EDF would always seek to be in a position to take prompt corrective action to replenish capital to an appropriate level in Wagram so that solvency capital compliance can be demonstrated. EDF is expected to continue to have sufficient capacity to provide this support to Wagram.

B.4 Internal Control System

The Internal Control System embedded in the Company's operations is a mix of processes undertaken by all stakeholders within the Company to provide reasonable assurance that the strategic objectives will be achieved.

In order to achieve the aforementioned objectives, the Internal Control framework of the Company is structured around five complementary components.

Component	Contents
1) Control environment	A strong "risk and control" culture is embedded within the Company's operations through the continuous oversight of the Board of Directors and the communication to all internal stakeholders of all governance and risk principles through the Company's governance manual.
2) Risk assessment	Procedures and policies are detailed and formalised in order to disclose the way of identifying, managing, controlling, mitigating and reporting issues relating to each risk category.
3) Reporting channels	Clear and structured reporting processes are in place enabling the Board of Directors to have access to relevant, complete, reliable, correct and timely communication related to internal as well as external events.
4) Monitoring process	The appropriate escalation of significant issues to the Board of Directors, the ongoing involvement of all internal stakeholders as well as the Internal Audit process enables the Company to continuously monitor and adapt when necessary its Internal Control System.
5) Control activities	The Company has developed a comprehensive set of preventive, detective or corrective control actions embedded in its daily operations.

In order to set out how the Internal Control System is implemented, the Company's processes and related control activities are documented, monitored and reviewed on a regular basis.

These items are designed by the Risk Management Function, approved by the Board of Directors and evaluated by the Internal Audit Function. They are reviewed as often as necessary but at least annually.

Compliance Function

The Compliance Function is an integral component of the Company's governance system. The Company has a dedicated Head of Compliance reporting to the Board of Directors, who coordinates the activities of the Compliance Function.

The responsibilities of the Compliance Function include:

- utilisation of compliance management practices that contribute to sound, responsible and sustainable business practices by the Company;
- presentation of an annual compliance plan to the Board of Directors, outlining specific areas which it will focus on during a particular year;
- promotion of a culture of compliance within the organisation;
- maintenance of a comprehensive compliance risk management control and reporting system in conjunction with the Risk Management Function to assist in managing the compliance risk faced by the Company;

- consideration of possible future changes in the legal environment and their potential effect on the Company as well as providing regular compliance and regulatory updates to the Board of Directors;
- identification and communication throughout the Company of the laws, regulations and codes of conduct to which the Company is subject and assisting to embed compliance with these in the way the Company does business; and
- investigation and follow up of compliance breaches, ensuring timely reporting to the Board and in certain circumstances to outside bodies such as the CBI.

B.5 Internal Audit Function

Purpose and Objectives

The purpose of the Internal Audit Function is to serve as an independent function that objectively evaluates and recommends improvements with respect to the Company's Internal Control System by facilitating an objective and independent assessment of the processes and controls in place.

It assists the Company in accomplishing its objectives by bringing a systematic, disciplined approach to evaluate and improve the effectiveness of risk management, control, and governance processes employed by the Company. The audit approach is risk based and in line with an annual audit plan which is provided by the Head of Internal Audit to the Board of Directors.

The Internal Audit Function and the appointed Head of Internal Audit report directly to the Board of Directors.

Independence and Impartiality

The Company's Internal Audit Function has been established to be independent of the activities audited, the operational functions and the Board of Directors.

The Internal Audit Function is free to report its findings and appraisals and to disclose them to the Board as required. This principle of independence ensures that the Internal Audit Function reports directly to the Board of the Company.

B.6 Actuarial Function

The Company has established an effective Actuarial Function, including a nominated Head of Actuarial Function ('HoAF') approved by the CBI, which carries out the following key tasks:

- coordinate the calculation of technical provisions;
- identify any inconsistency with the requirements set out in Articles 76 to 85 of the Solvency II Directive for the calculation of technical provisions and propose corrections as appropriate;
- explain any material effects of changes of data, methodologies or assumptions between valuation dates on the amount of technical provisions;
- assess the consistency of the internal and external data used in the calculation of technical provisions against the data quality standards as set out in Article 82 of the Solvency II Directive. Where relevant, the Actuarial Function will provide recommendations on internal procedures to improve data quality;
- take into consideration the interrelations between the Underwriting Policy, reinsurance arrangements and technical provisions, when providing its opinion;
- report in writing at least annually to the Board of Directors. The reporting should document all material tasks that have been undertaken by the Actuarial Function, and include:
 - details of the technical provisions
 - methodologies & assumptions
 - data sufficiency & quality
 - experience analysis
 - report to the Board on reliability & adequacy

- opinion on Underwriting Policy
 - opinion on reinsurance arrangements.
 - details of any deficiencies identified and recommendations as to how such deficiencies could be remedied
- contribute to the effective implementation of the risk management system in particular:
 - with regard to risk modelling underlying the calculation of the Solvency and Minimum Capital Requirement; and
 - the ORSA process.
- think critically and organise the execution of actuarial approaches
- provide an Actuarial Opinion to the Board of Directors in respect of the ORSA

In establishing the Company's Actuarial Function, the Board of Directors has ensured that the persons involved have the requisite qualifications and demonstrable experience in the area of non-life reserving and are fully conversant with the Solvency II requirements for the calculation of Technical Provisions.

B.7 Outsourcing

All functions and activities of the Company are eligible to be outsourced provided that specific criteria are satisfied in each instance.

The Board is responsible for the approval and termination of all outsourcing arrangements of critical or important functions or activities. Critical or important functions or activities include key functions relating to the Company's System of Governance and all functions within the Company that are fundamental to carrying out its core business. The Board is responsible for ensuring notification to the CBI is made in a timely manner prior to the outsourcing of critical or important functions or activities, and thereafter where there have been material developments in relation to the service provider.

The objectives of Wagram's Outsourcing Policy are to ensure that the outsourcing of critical or important operational functions or activities does not lead to:

- Reduction in the Board's responsibility for, or influence over, key functions of the Company;
- Material impairment of the quality of the Company's System of Governance;
- Any impairment of the Company's ability to meet its regulatory requirements;
- Non-adherence to the Company's approved policies and procedures;
- Undue increases in operational risk or cost;
- Material impairment of the Company's ability to fulfil its obligations to stakeholders;
- Conflicts of Interest;
- Breach of the Company's data protection obligations.

The Board is responsible for assessing the risks associated with the outsourcing of critical or important functions or activities, carrying out the appropriate due diligence on the outsourced service provider and for reviewing the performance of outsourced service providers against their agreed and documented Service Level Agreements ('SLA').

The management of the Company is coordinated and carried out at its place of business in Ireland. Wagram engages outsourced service providers as necessary in order to access the expertise and strength and depth of resources necessary to manage the specific requirements of a regulated captive insurance company operating on a global basis.

The following critical or important functions / activities are outsourced:

Critical or important function	Outsourced Service Provider	Jurisdiction
Compliance Function	Aon Insurance Managers (Dublin) Ltd	Ireland
Head of Compliance Function	Joan Moore, AIMD	Ireland
Actuarial Reserving	Barnett Waddingham	UK
Head of Actuarial Function	Fearghas MacGregor, Barnett Waddingham	UK
Internal Audit Function	Forvis Mazars	Ireland
Head of Internal Audit Function	Danon Jones, Forvis Mazars	Ireland
Investment Management	Allianz Global Investors	Germany

B.8 Any other information

The Board is satisfied, based on its assessment of the frameworks which have been established and are in use, that the Company's system of governance is appropriate and adequate for the nature, scale and complexity of the risks inherent in its business operations.

There are no other material items to report in this section.

C. RISK PROFILE

The Risk Appetite Framework adopted by the Board sets out the level of risk that the Company is prepared to accept in the pursuit of its strategic objectives. It sets out:

- the Company's overall philosophy to risk taking and the expectations of shareholders;
- the Company's tolerance to loss of capital, profit volatility and other specified measures; and
- the risk limits that are acceptable in terms of exposures to different types of risk.

The Company's Risk Register combines operational and risk management processes to deliver a descriptive analysis of material risks threatening at least one of the Company's strategic objectives.

The Board's annual ORSA process is based on the company's current and expected risk profile over the business planning period and supports the Board in achieving its strategic objectives by taking a structured and combined approach of strategy, risk management and capital management.

C.1 Underwriting risk

The principal risks and uncertainties that the Company faces are, by the very nature of the business, those for which it provides or has provided insurance cover. The risk under any insurance contract is the possibility that an insured event occurs, and uncertainty arises as to whether the Company will have sufficient assets to satisfy the amounts payable under the contract. The Company seeks to ensure that it collects sufficient premium income to meet the cost of potential claims over time, but the uncertainty surrounding the severity and frequency of claims can lead to variation in the Company's performance over the short term. Whilst considerable judgment is involved, the Directors ensure that suitable processes are in place to ensure the reliability, sufficiency and adequacy of the statistical and accounting data to be considered in both premium pricing and loss reserving exercises.

As the Company is a captive insurer, the Company is effectively insuring the risks of one customer, its parent group, and thus is exposed to risk concentration. However, some diversification is achieved through the number of unrelated lines of business and the varying geographical locations of the underlying risks.

The Company takes all reasonable steps to ensure that it has appropriate information regarding its underwriting exposures.

The principal assumption underlying the Company's estimation of liabilities is that the Company's future claims development will follow a similar pattern to past claims development. Additional qualitative judgements are used to assess the extent to which past trends may not apply in the future, for example, isolated large claim occurrences, economic conditions, climate change, internal factors such as portfolio mix, policy conditions and claims handling procedures. Judgement is further used to assess the extent to which external factors, such as judicial decisions and government legislation, affect the estimates. The claims reserves have been subject to independent high-level review by a professional actuary.

The Company manages these risks through its underwriting strategy of ensuring premiums are priced in line with market averages, arranging for an external qualified actuary to review the reserving adequacy of the Company on an annual basis, the setting of appropriate policy limits and putting adequate reinsurance arrangements in place. The Company also monitors emerging issues and factors in their potential impact on the Company's pricing and claims reserving.

The primary risk mitigation technique utilised is the purchase of a mixture of excess of loss, stop loss and quota share reinsurance as this provides balance sheet protection, from both claims severity and frequency, in an economically and administratively efficient manner. The effectiveness of these reinsurance arrangements is assessed on a quarterly basis through the preparation of the Company's financial accounts and reviewed at an overall level as part of the considerations for premium pricing on an annual basis. The primary focus of the Company's reinsurance strategy is on the security and financial stability of reinsurers selected.

As part of the Company's ORSA process, various stress and scenario tests incorporating differing claims experiences, both for Wagram and its primary reinsurer, Océane Re, were considered. While these scenarios resulted in a reduction in the Company's available capital, the regulatory solvency requirements were still achieved. In addition, the potential impact of climate change was considered.

Annual support and certification is provided by the Company's Actuarial Function. The Head of Actuarial Function is required to provide, annually, their opinion on the Company's technical provisions, solvency position, underwriting policy, reinsurance arrangements, and ORSA.

Sensitivity analysis is also performed for underwriting risks based on 10% movement in the loss reserves and holding all other assumptions constant.

The resultant impact on Gross and Net claims reserves and Profit before Tax ('PBT') for the financial period is shown below:

	Total Gross Technical Provisions For Claims Outstanding €	Total Net Technical Provisions For Claims Outstanding €	Impact on PBT for the year €
Increase in Reserves by 10%	248,812,661	131,591,875	(11,962,898)
Decrease in Reserves by 10%	203,573,995	107,666,079	11,962,898

C.2 Market risk

The risk of future changes in market prices, which would result in devaluation of investable assets, may result from several factors, including, but not limited to, value, liquidity, duration, composition, interest rates, foreign exchange rates and market fluctuations. The Company diversifies its portfolio to reduce the exposure to market fluctuations and market risk concentrations.

Wagram has an investment strategy in place in line with its Risk Appetite Framework and the related 'Prudent Person' regulatory requirements. The Company endeavours to:

- prudently invest with consideration of the prevailing financial market environment;
- ensure the Company invests appropriately so as not to result in the Company failing to meet its Solvency Capital Requirements;
- ensure that the Company holds assets of sufficient value and liquidity to meet all liabilities as they become due;
- maximise investment return within the levels of risk as defined by the Company's Risk Appetite;
- ensure compliance with the Liquidity Strategy and Policy;
- ensure compliance with the Asset-Liability Management Strategy and Policy; and
- ensure effective risk management of investments at all times, with due consideration of the risks associated with investments and procedures to monitor, manage and report these risks in a timely manner as part of the Company's overall Risk Management System.

Interest rate risk arises on the return on the Company's investments including cash and deposits with credit institutions. The sensitivity analysis of net income to fluctuation in interest rate is shown below:

12-month period	Estimated approximate effects on net income	
Sensitivity Test	31 December 2024 €'000	31 December 2023 €'000
Shift up 100 basis points	2,174	2,106
Shift down 100 basis points	(2,174)	(2,106)

The Company is exposed to currency risk to the extent its assets and liabilities are denominated in a currency different from its functional currency. The Company seeks to mitigate currency risk by

matching the assets and liabilities which arise in different currencies. The ultimate settlement of loss reserves may be in currencies other than Euro. The Company's exposure to foreign exchange risk arises mainly in respect of USD and the Company accordingly holds assets in USD to seek to hedge against potential currency risks arising from reinsurance premium payments and any loss reserves on a net of reinsurance basis.

There were no material changes to the measures used to assess the market risk exposure or the material risks over the reporting period.

C.3 Credit risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. The assets that are exposed to credit risk are:

- Cash and cash equivalents
- Investments and deposits with credit institutions
- Reinsurers' share of insurance liabilities (outstanding and settled)

The Company utilises custodians deemed to be of high credit quality to hold its cash and cash equivalents and deposits with credit institutions, and additionally has limits in place in relation to the amount of cash which can be held by any one financial institution.

Investments and deposits are managed under the Investment strategy (market risk). The Company recognises the credit risks associated with its reinsurance arrangements. The Company manages its reinsurance risks by establishing a reinsurance strategy and this strategy sets out the minimum requirements for any reinsurance counterparty.

The Company cedes a portion of risk to Océane Re, pools and a panel of commercial reinsurers in the normal course of business. The purchase of reinsurance does not relieve the Company of its obligation to its policyholders and accordingly a credit risk exists to the extent that any reinsurer is unable to meet the obligations assumed under such reinsurance agreements.

The Company mitigates this credit risk by reinsuring with counterparties who are considered appropriately credit worthy. Reinsurers that are not rated or do not fall within the pre-defined rating categories are approved on a case-by-case basis. The creditworthiness of reinsurers is monitored on a regular basis.

There were no material changes to the measures used to assess the credit risk exposure or the material risks over the reporting period.

C.4 Liquidity risk

The Company is exposed if proceeds from financial assets are not sufficient to fund obligations arising from its insurance contracts. The Company can be exposed to daily calls on its available investment assets, principally from insurance claims. Liquidity risk is the risk that an entity will encounter difficulty in raising funds to meet cash commitments associated with financial obligations.

The Company has determined that liquidity risk does not represent a significant exposure to its business. This assessment is based on the fact that the Company has its investments held in highly liquid assets which it can access immediately or within a very short time frame without incurring material costs or penalties. Investments are in compliance with the Company's investment guidelines.

There were no material changes to the measures used to assess the liquidity risk exposure or the material risks over the reporting period.

C.5 Operational risk

Operational risk is the risk of loss arising from system failure, human error, fraud, or external events. When controls fail to perform, operational risk can cause damage to reputation, have legal or regulatory

implications or can lead to financial loss. The Company has a rigorous control framework and monitoring process in place to manage operational risk. Controls include effective segregation of duties, access controls, authorisation and reconciliation procedures, staff education, and assessment processes. Outsourced activities are monitored and managed in the same manner in line with the Outsourcing policy.

The Company cannot expect to eliminate all operational risk but, by implementing a rigorous control framework and by monitoring and responding to potential risks, the Company is able to manage the risk. In addition, Wagram is subject to Internal and External Audit review.

Wagram maintains a regulatory dialogue with the CBI to mitigate the risk of any potential sanction or compliance breach as well as using expert, industry leading, service providers to provide its outsourced functions which helps avoid any material error or delay. In order to ensure the quality of the outsourced functions is as high as possible, Wagram puts in place service level agreements outlining key performance indicators against which its outsourced service providers can be monitored and assessed.

The Company does not consider that it is exposed to material residual risk in this area due to the formality that has been created around the Company's processes and procedures, including those for financial and regulatory reporting. There is no specific risk concentration associated with this category as internal controls include appropriate segregation of duties.

There were no material changes to the measures used to assess the operational risk exposure or the material risks over the reporting period.

C.6 Other material Risks

Strategic Risk

Strategic risk is the risk of loss arising from adverse business decisions, improper implementation of decisions, or lack of responsiveness to industry changes i.e. the risk associated with implementing the wrong strategy or failing to correctly implement the chosen strategy.

The control and monitoring actions/principles underlying the strategic risk management of the Company are:

- Review at least annually of the appropriateness of the high level overall objectives for the Company; the major risks facing the Company; the Risk Appetite for each of these major risks identified. The Board of Directors will ensure continuing appropriateness, at least annually and revisions shall be affected where necessary.
- Ensure the Company strategy is implemented correctly including approval, review and, monitoring of agreed Key Performance Indicators for the Company.
- Ensure all plans are regularly reviewed to ensure that Risk Tolerances are not exceeded, individually or in total.

Sensitivity Risk

The Actuarial function assesses the impact of varying the underlying assumptions on their Best Estimate of Wagram's unpaid claim liabilities on an annual basis.

There were no material changes to the measures used to assess the strategic or sensitivity risk exposure or the material risks over the reporting period.

No other material risks have been identified.

C.7 Any other information

There are no other material items to report in this section.

D. VALUATION FOR SOLVENCY PURPOSES

D.1 Assets

Wagram prepares its financial statements on a going concern basis in accordance with Financial Reporting Standards 102 & 103 (FRS 102 & 103) issued by the Financial Reporting Council, and promulgated for use in Ireland by Chartered Accountants Ireland. The company is also subject to the requirements of the Companies Acts 2014 and the European Union (Insurance Undertakings: Financial Statements) Regulations, 2015. The financial statements have been prepared under the historical cost convention.

At the end of the current reporting period Wagram has total assets valued at EUR 312,917,928 for solvency purposes. The main categories of assets in the total assets are as follows:

- Deposits other than cash equivalents EUR 16,850,000

This amount represents short term deposits stated at market value for both solvency and financial statement purposes.

- Financial Investments EUR 154,998,648

This amount is the market value of a Government and Corporate bond portfolio and a money market fund being an undertaking for a collective investment in transferable securities (UCITS).

- Non-life reinsurance recoverable EUR 88,869,408

These amounts are dealt with in Section D2 below as part of the explanation on the valuation of technical provisions.

- Cash and cash equivalents EUR 45,614,791

Cash and cash equivalents comprise cash at banks. Carrying amounts approximate fair value due to the liquid nature of the assets. There are no valuation adjustments for solvency purposes.

- Insurance and intermediaries receivables EUR 2,414,477

Being amounts not past-due for payment by policyholders, reinsurers, and other receivables linked to insurance business, that are included in cash-inflows of technical provisions in Section D2 below.

- Reinsurance receivables EUR nil

Being amounts due from reinsurers in respect of claims paid by the Company. Other amounts totalling EUR 10,113,455 included in the financial statements balance have been included in the technical provisions calculation in Section D2 below

- Other Assets EUR 4,144,816

This amount consists primarily of taxes prepaid to a European fiscal authority.

- Deferred acquisition costs EUR nil

Such amounts are not included as an asset in the Solvency II balance sheet as all cash flows are taken into account in the calculation of technical provisions.

Information on how the Company invests its assets and manages risk in this area, including how it achieves compliance with the 'prudent person principle', is set out in Sections C2 – C4 above. Operational risks relating to the Company's assets are managed according to the control framework described in Section B4 above.

D.2 Technical Provisions

The technical provisions of Wagram as at 31 December 2024, gross and net of reinsurance, are set out below in kEUR:

	Claims Provision	Premium Provision	Best Estimate	Risk Margin	Technical Provisions
Gross	204,094	(26,955)	177,139	9,831	186,970
Net	108,348	(20,079)	88,269	9,831	98,101

These amounts comply in all material respects with the relevant Solvency II requirements. The decrease in the gross technical provisions from the financial statements amount of EUR 256,620,961 relates to the expected profit associated with unearned and future premiums – the expected present value of the cash inflows exceeds that of the cash outflows.

The starting point for the calculation of the Solvency II technical provisions is the amounts which have been calculated for the financial statements reserving basis. Within the financial statements, full provision is made for the estimated cost of all claims notified but not settled at the period-end using the best information available at that time. Provision is made for the cost of claims incurred but not reported at the period-end and potential development on outstanding claims estimates (together regarded as IBNR reserves). In addition, an estimate is made for future claims handling expenses relating to claims outstanding at the period-end.

Provisions are calculated gross of any reinsurance recoveries with a separate estimate being made of amounts recoverable from reinsurers. The Company takes all reasonable steps to ensure that it has appropriate information regarding its claims exposures. In estimating the cost of claims notified but not paid, the Company has regard to claims circumstances as reported, any information available from loss adjusters and information on the cost of settling claims with similar characteristics in previous periods. IBNR provisions are established having regard for the results of a valuation on a best-estimate basis by an independent actuary together with a margin for uncertainty which has been determined by management.

Claims projections have been carried out using a range of standard actuarial methods, including the Development Factor Method (DFM), the Bornhuetter-Ferguson method (BF) and the expected loss ratio method. DFM involves the calculation of loss development factors from historical data which are then used to estimate the ultimate cost for years in which claims are still open. DFM assumes that past development patterns will continue to be appropriate for the future. BF involves a blend of DFM and an expected loss ratio method and is used for long-tail lines of business where data may be insufficient or immature. Under the expected loss ratio method, estimated ultimate losses are based upon a prior measure of anticipated losses, usually relative to a measure of exposure. An initial expected loss ratio (IELR) is selected and applied to the measure of exposure to determine ultimate losses for the period. This method has the advantage of stability over time but is less responsive to actual loss experience.

Solvency II requires undertakings to hold technical provisions which correspond to the amount they would have to pay to transfer their (re)insurance obligations immediately to another undertaking. This value comprises a **best estimate** and a **risk margin**, intended to represent a market consistent valuation. The technical provisions take account of the time value of money by discounting using a risk-free interest rate term structure as at the valuation date. There is no allowance for prudence in the calculation of best estimates.

The best estimate is calculated by considering all future cash inflows and outflows required to settle the existing (re)insurance obligations over their lifetime. It represents the mean outcome of all possible scenarios, taking account of how likely they are to occur and their potential variability. In this regard, the best estimate is a probability-weighted average of future cash flows, allowing for the time value of money.

The Solvency II best estimate is calculated gross with any recoverables calculated separately following the same methodology. The best estimate is made up of a claims provision and a premium provision, relating to past and future exposures respectively. An allowance has been made for reinsurer counterparty default. Claims payments in the claim and premium provisions have been projected at annual intervals using annual paid development patterns.

The Solvency II claims provision is equivalent to the expected net present value of the best estimate claims reserve, with allowances to allow for all possible outcomes through the inclusion of provisions for Events Not in Data (ENID) and the future expenses that will be incurred in servicing the existing insurance obligations. The claims provision also includes all unpaid premium relating to earned exposures that are within payment terms.

Under the Solvency II contract boundary definition, any policies which have been bound, even if unaccepted as at the valuation date, must be considered in the premium provision. The Solvency II premium provision is therefore equivalent to the expected net present value of the following cash inflows and outflows, relating to unearned exposure from accepted contracts and exposure from unaccepted contracts bound as at the valuation date:

- Cash flows from future premiums in relation to future claims;
- Cash flows arising from future claim events (e.g. claims payments);
- Cash flows arising from loss adjustment expenses in respect of claims events occurring after the valuation date;
- Cash flows arising from the ongoing administration of policies in-force as at the valuation date; and
- Cash flows arising from salvage and subrogation.

Wagram has included the risks accepting on 1 January 2025 in its calculation of the premium provision for the current reporting period. This is because the Company is obliged to accept this business as at the valuation date, having concluded its underwriting discussions at Board level and committed to the provision of coverage as part of EDF's property programmes and nuclear third-party liability programmes. As this business is expected to be profit making, the best estimate of premium provisions is a negative amount i.e. an asset rather than a liability.

Estimates are "best estimates" in the sense that they are intended to be a probability-weighted average of all possible outcomes. Wagram has employed techniques and assumptions that are appropriate for the purpose of calculating its Solvency II technical provisions. The actual amounts required to meet future claim payments may differ from estimates for a number of reasons, such as model specification error, parameter error and random error due to the inherent uncertainty in insurance. External environment risk factors may cause material deviations in estimates of technical provisions, including persistent negative interest rates, inflation and currency exchange rate fluctuations.

The Solvency II risk margin is intended to represent an amount that Wagram would be required to pay, in excess of the best estimate of the liabilities, for a third party to assume the risk of running off the existing liabilities. The actuarial calculation of the risk margin is consistent with the Solvency II regulations, applying a 6% cost of capital to the amount of capital required at the beginning of each year to support the run-off of the insurance obligations. These future costs of capital are then discounted to the valuation date and summed to calculate the amount of risk margin required.

Wagram Insurance Company DAC

The resultant differences between the value of technical provisions for solvency purposes and the financial statements at 31 December 2024 are shown below (EUR'000):

Solvency II v IFRS Technical Provisions 2023 in (€'000s)	Claims Provision	Premium Provision	Total
Reserves per Statutory Financial Statements – Gross	226,193	36,068	262,261
Margins	(20,616)	-	(20,616)
Removal of Future Profits	-	(26,639)	(26,639)
Premiums Receivable	(1,302)	(104,663)	(105,965)
Bound but not Incepted Adjustment	-	68,595	68,595
Non-ULAE expenses	3,222	3,610	6,832
Events Not In Data	5,128	1,726	6,854
Allowance for Discounting	(8,531)	(5,652)	(14,183)
Solvency II Technical Provision (ex. RM)	204,094	(26,955)	177,139
Risk Margin	-	-	9,831
Gross Solvency II Technical Provision	204,094	(26,955)	186,970
Recoverables from Reinsurance Contracts	(95,768)	6,876	(88,892)
Allowance for counterparty default risk	22		22
Net Solvency II TPs	108,348	(20,079)	98,100
Reserves per Statutory Financial Statements – Net	119,629	9,046	128,675

Information on how the Company manages risk in the area of underwriting and reserving is set out in Section C1 above. Operational risks relating to the Company's technical provisions and claims data are managed using the Control Framework described in Section B4 above.

The Company is satisfied that it has access to sufficient historical claims data on an annual basis for the calculation of its technical provisions and that this data is accurate and appropriate for the Company's needs. Claims management processes by the Company are appropriate and adequate given the nature of the underlying risks. Significant reporting delays are not experienced.

In calculating its technical provisions on a Solvency II basis, Wagram has not applied any of the following items:

- matching adjustment referred to in Article 77b of Directive 2009/138/EC;
- volatility adjustment referred to in Article 77d of Directive 2009/138/EC;
- transitional risk-free interest rate-term structure referred to Article 308c of Directive 2009/138/EC; and
- transitional deduction referred to in Article 308d of Directive 2009/138/EC.

D.3 Other liabilities

Wagram has various non-technical liabilities at the end of the reporting period consisting of:

- Insurance & intermediaries payables of EUR 971,768 being amounts due to policyholders, insurers and other business linked to insurance, but that are not technical provisions.
- Reinsurance Payables of EUR 163,098 being amounts payable, past due to reinsurers (in particular current accounts) other than deposits linked to reinsurance business, which are not included in reinsurance recoverable.
- Payables (trade, not insurance) of EUR 2,698,000 are classified as payables for solvency purposes, this is the total amount trade payables, including amounts due to employees, suppliers, etc. and not insurance-related.
- Deferred tax of EUR 2,860,248 - the deferred tax liability arises as a result of the overall increase in the Company's available capital when moving from the financial statements basis of accounting to a Solvency II valuation. It is calculated by applying the prevailing corporation tax rate of 12.5% to the sum of all the other valuation adjustments explained in this Section D.
- Other liabilities of EUR nil.

D.4 Alternative methods for valuation

No alternative methods were used.

D.5 Any other information

There is no other information to report.

E. CAPITAL MANAGEMENT

E.1 Own funds

The Company has put in place a Capital Management policy to ensure that 'Own Fund' items, both at issue and subsequently, meet the requirements of the Solvency II capital regime. The objectives of the policy are to ensure that on an on-going basis the Company has:

- own fund items available to meet its capital requirements; and
- developed processes to ensure the appropriateness of its own fund items.

As part of the annual review of the medium-term capital plan, the Company reviews the level, composition and classification of own fund items to ensure they continue to meet its own solvency needs, and its regulatory obligations in respect of Solvency Capital Requirement (SCR) and Minimum Capital Requirement (MCR). A four year forward-looking time horizon is used for business planning purposes and any anticipated changes to the Company's business and risk profile are factored into the ORSA process to assess the solvency and capital needs over this business planning period. It is intended that the Company's capital needs will be managed out of its existing pool of own funds and the efficient management of the Company's insurance business. Should additional funds be required outside of that, they will be advanced by the shareholder. There have been no material changes to this approach from the prior year.

The Company's own funds consist of the following items:

- Issued Share Capital; and
- Retained Earnings.

Any change to the share capital requires the approval of the Shareholder and the Board. Retained earnings are adjusted on a quarterly basis to take account of the profits/losses earned in the period together with any Solvency II valuation adjustments.

The payment of dividends is considered on an annual basis by the Board as part of its medium-term capital assessment. Potential dividends will be considered as part of the Company's ORSA process to ensure that the Company will continue to meet its solvency needs over the business planning period.

Any other qualifying own fund item requires the review and approval of the Board. In such instances, the Board must ensure that the terms and conditions of any own fund item are clear and unambiguous in relation to the capital classification.

Total available own funds to meet the SCR at the end of reporting period and the prior year comparative period are EUR 119,254,878 and EUR 93,518,214 respectively, analysed as follows:

	2024 EUR	2023 EUR
Ordinary paid up share capital	1,000,000	1,000,000
Reconciliation reserve	118,254,878	92,518,214
Total basic own funds	<u>119,254,878</u>	<u>93,518,214</u>

The movement in basic own funds during the reporting period reflects the profitability of the Company as adjusted for the valuation of net technical provisions on a market consistent fair value basis under Solvency II. The reconciliation reserve represents the Company's retained profits as adjusted for Solvency II valuation principals. The adjustments which arise in the application of these principles are shown in the equity reconciliation below.

At the end of the current reporting period eligible own funds available to meet the Company's SCR and MCR are EUR 119,254,878, comprised of Tier 1 capital.

Wagram Insurance Company DAC

The equity position as shown in the Company's 2023 year-end financial statements can be reconciled to the basic own funds balance under Solvency II as follows:

Reconciliation between Financial Statements and Solvency II valuations	
	EUR 000s
Equity per the Company's financial statements	99,233
Adjustments to technical provisions	30,576
Adjustments to (re)insurance receivables/payable	(6,733)
Net deferred tax liability	(2,860)
Deferred acquisition costs	(961)
Own funds (excess of assets over liabilities for solvency purposes)	119,255

Adjustments are made to technical provisions in line with the valuation methodologies set out in section D.2 above. Accrued liabilities have been discounted. These adjustments are reflected in the Company's reconciliation reserve. A deferred tax liability is recognised due to the increase in available capital between the financial statements and the regulatory own funds. The amount represents 12.5% of the above adjustments and is considered fully recoverable in line with the Company's projections.

E.2 Solvency capital requirement and minimum capital requirement

At the end of the current reporting period, Wagram's SCR and MCR have been calculated as EUR 50,077,392 and EUR 13,181,386.

The SCR is intended to correspond to the capital the Company needs to hold in order to limit the probability of ruin, in the following 12 months, to 0.5%, i.e. ruin would occur less than once in every 200 years. The SCR calculated at the end of the current reporting period, relates to the capital required to support the business over the prospective 12 months; covering both existing liabilities and business written during 2024. Based on the Company's eligible own funds of EUR 119,254,878, the Company has a solvency ratio at 31 December 2024 of 238%.

The SCR has been calculated using the standard formula and without the application of any undertaking specific parameters.

The split of SCR by risk modules is shown below, together with the prior year comparative:

Risk Item		31/12/2024	31/12/2023
		EUR 000s	EUR 000s
Market Risk	Interest Rate Risk	86	2,134
	Spread Risk	3,252	4,123
	Currency Risk	303	51
	Concentration Risk	2,435	2,442
Non-Life Risk	Premium-Reserve Risk	35,005	27,028
	Catastrophe Risk	18,652	14,544
	Lapse Risk	9,973	2,568
Counterparty Default		9,609	8,541
Basic SCR		51,210	40,436
MCR		13,181	10,919
SCR		50,077	40,607
Solvency II Equity		119,255	93,518
Solvency Ratio		238%	230%

The Interest Rate Risk Charge has reduced materially due to the stabilisation of interest rates. A Lapse Risk Charge of €10 million has been included in the SCR. The charge has been set equal to the increase in basic own funds as a result of the discontinuance of 40% of insurance policies for which discontinuance would result in an increase in technical provisions (excluding risk margin). The Premium-Reserve Risk remains high due to increased premium risk on the premiums generated by the various multi-year policies and the increased value of claims provisions.

The MCR is calculated through a prescribed formula based on the net technical provisions (excluding the risk margin) and net written premium. It is also constrained to be between 25% and 45% of the SCR. Further to this, SI 485 sets out absolute minimum MCR values for non-life and life insurers,

reinsurers and captives. In the case of Wagram, as a non-life captive insurer writing liability business, this absolute floor is EUR 3,700,000.

E.3 Use of duration-based equity risk sub module in calculation of the solvency capital requirement

There was no use of duration-based equity risk sub module in the calculation of the SCR.

E.4 Differences between the standard formula and any internal model used

Wagram used the standard formula in determining its SCR and MCR and did not rely on any internal model.

E.5 Non-Compliance with the Minimum Capital Requirement and non-compliance with the Solvency Capital Requirement

There are no instances of non-compliance with the MCR and SCR.

E.6 Any other information

There is no other information to report.

<i>Note: Tables within this report contain minor rounding differences in certain instances due to amounts being displayed as whole numbers or in thousands while the source workings underlying the annual reporting templates are calculated to two decimal places. These differences are immaterial.</i>
