

Retail Interest Rates – April 2023

14 June 2023

Household Lending Interest Rates

- The **weighted average interest rate on new Irish mortgage agreements**¹ at end-April 2023 was 3.63 per cent (Chart 1), an increase of 9 basis points compared to the previous month and up 86 basis points in annual terms. In the same monthly period, the equivalent euro area average rose by 6 basis points to 3.57 per cent (Table 1). As at end-April, the rate in Ireland exceeded the euro area average by 6 basis points (Chart 1).
- The **weighted average interest rate on new fixed rate mortgage agreements**, which constitute the majority (89%) of the total new mortgage agreements, was 3.54 per cent in April. This represents an increase of 10 basis point from March and 95 basis points higher on an annual basis.
- The **total volume of pure new mortgage agreements** amounted to €797 million in April, a 9 per cent increase on the previous month, and an increase of 32 per cent in annual terms (Chart 2).
- **Renegotiated mortgages** totalled €355 million in April (94% within the fixed rate category), compared to €427 million recorded in March. The associated weighted average fixed interest rate was 3.26 per cent in April 2023.
- The interest rate on **new consumer loans** decreased by 10 basis points to 7.37 per cent in April when compared to the previous month. The total volume of new consumer loans was €253 million in April, representing an increase of 38 per cent in annual terms.

Table 1: Weighted average interest rates for house purchase (excluding renegotiations), April 2023

	Interest Rate (%)	M-o-M Change (bps)	Y-o-Y Change (bps)	Volume (€m)
New mortgage agreements	3.63	9	86	797
of which				
- fixed rate mortgage agreements	3.54	10	95	713
- variable rate mortgage agreements	4.40	2	85	84
New mortgage agreements - Euro area average	3.57	6	199	40,873

Non-Financial Corporations Lending Rates

- **NFC overdrafts** stood at €6,729 million² at end-April, an increase of 37 per cent from April 2022. The associated weighted average interest rate was 5.14 per cent.
- **New NFC loan agreements** decreased to €883 million in April, 36 per cent lower than April 2022. The weighted average interest rate was 5.60 per cent in April, up from the previous year (3.16 per cent). The equivalent rate in the euro area rose to 4.35 per cent in April.
- **New NFC loans of up to €250k** amounted to €127 million in April, with the associated weighted average interest rate at 5.92 per cent. There were €72 million worth of new **NFC loans of over €250k and up to €1 million** newly agreed in April, with a weighted average interest rate of 5.13 per cent.
- The volume of **new NFC loans of over €1 million**, which account for 78% of all new NFC loans, equalled €685 million in April, a decrease of 44 per cent compared to April 2022. The weighted average interest rate on this instrument category was 5.59 per cent in April (Chart 3). This reflects a year-on-year increase of 252 basis points.

Household and Non-Financial Corporations Deposit Rates

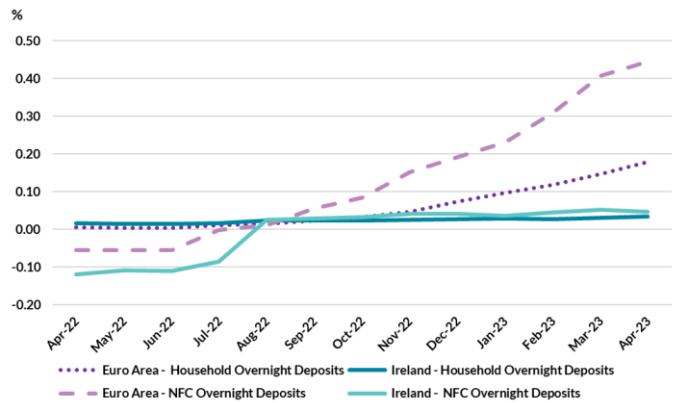

- Interest rates on **household overnight deposits** stood at 0.03 per cent in April 2023 (Chart 4). Interest rates on **new household deposits with agreed maturity** rose to 1.59 per cent in April in Ireland. The equivalent rate in the euro area was 2.27 per cent (Chart 5).
- Interest rates on **NFC overnight deposits** stood at 0.05 per cent in April 2023. Interest rates on **new NFC deposits with agreed maturity** rose to 2.72 per cent in April. The corresponding rate in the euro area was 2.80 per cent.

² Overdrafts include revolving loans and extended credit card debt.

Note 1:

Interest rates and new business volumes are collected from credit institutions with a significant level of lending or deposit business with households or non-financial corporations (NFCs). The sample is monitored to ensure compliance with ECB Regulation.

Monthly *Retail Interest Rate Statistics* in Tables B.1.1 to B.2.2 cover all euro-denominated lending to, and deposits from, households and NFCs in the euro area. New business is defined as any new agreement during the month between the customer and the credit institution. This agreement covers all financial contracts that specify the interest rate for the first time, including any renegotiation of existing business (excluding automatic renewals). These statistics are compiled under ECB Regulation and are comparable across the euro area.

Quarterly *Retail Interest Rate Statistics* in Table B.3.1 cover all euro and non-euro denominated mortgage lending in the Republic of Ireland only. New business refers to new mortgage lending drawdowns during the quarter, broken down by type of interest rate (i.e. fixed, tracker and SVR). These statistics are not compiled under ECB MFI interest rate Regulation.

Note 2:

There are a number of factors that can lead to differences between *Retail Interest Rate* statistics and interest rates advertised by resident credit institutions. These include renegotiated loans, the inclusion of home improvement loans, and the underlying statistical compilation methodology.

Note 3:

The retail interest rate statistics are compiled using a sampling method as outlined in the relevant ECB Regulation and Guideline. The sampling methodology is refined and enhanced over time to maintain alignment with relevant international standards and maintain a quality

sampling approach. In such situations, revised methodology will be applied to historic data to ensure a consistent and coherent compilation of data across time and to allow for time series analysis. The period of revisions will be determined by the impact, feasibility and cost of undertaking the revision. Occasions when methodological revision have occurred are:

- Enhancements to the calculation of the national weighted average interest rates and national total business volumes have been introduced in ECB Guideline (ECB/2014/15) on monetary and financial statistics. These enhancements introduced in the Guideline involve changes to the sampling methods. The changes made contribute to a further harmonization of the data compilation process thus improving cross-country data comparison. The changes apply for reference period December 2014. As a result of these enhancements, data have been recalculated, as per the requirements of Guideline ECB/2014/15, for previous reference periods.
- Changes applied to reduce the maximum grossing factor used in estimating total population data. The changes reduce the potential volatility caused by irregular high grossing factors. The impact of the change is largely confined to new business loans to NFCs, with some minor changes to new business consumer loans. The changes apply from reference period April 2021. Data for previous reporting periods have been recalculated back to January 2019.

Recent data are often provisional and may be subject to revision.

Note 4:

Statistical classification of sole proprietors

In line with their treatment in ESA 2010, the Central Bank has harmonised the treatment of sole proprietors as reported by reporting agents across various datasets. This has resulted in a movement of loans and deposits from the NFC to the Household sector. These amendments were made in February 2022 with respect to reference data from January 2021.

Specifically, these changes result in an increase in loan and deposit volume amounts reported vis-à-vis the household sector, and a decline in balances reported vis-à-vis the NFC sector. This applies to both outstanding and new lending volumes in Tables B.1.2 and Table B.2.1.

For lending rates, this change means that both the aggregate interest rates on NFC loan agreements and on non-mortgage household loans has slightly reduced. The reason for this is that, in general, loans to sole proprietors typically attract a higher average interest rate than NFC loans, and therefore excluding them from the NFC category results in a slight reduction in the aggregated NFC interest rate.

Additionally, the interest rate on loans to sole proprietors is typically lower than the average interest rate on non-mortgage household loans, and therefore including them results in a reduction in the aggregated interest rate on household loans 'for other purposes' in Table B.2.1, and on household 'consumer loans and other loans' in Table B.1.2.

Treatment of securitised loans

As a result of an update to the ECB Regulation on the balance sheet items of credit institutions and of the monetary financial institutions sector (recast) (ECB/2021/2), there have been changes to how certain securitised loans are required to be classified for the purposes of statistical reporting. The following treatment, allowed under the previous Regulation ECB/2013/33, is no longer permitted: 'MFIs [...] may be allowed by their NCB to exclude from the stocks [...] any

loans disposed of by means of a securitisation in accordance with national practice [...]'.

The removal of this derogation from the updated Regulation ECB/2021/2 results in an increase in the reported volume of outstanding house purchase loans in Table B.1.2.
